## Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0<sup>s</sup> value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- p preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- E use with caution
- F too unreliable to be published

## Note on CANSIM

Data that appears in the **Industry Price Indexes** (catalogue no. 62-011-X) are also available electronically in our CANSIM (Canadian Socio-Economic Information Management System) database through the Internet tables 329-0038 to 329-0050 and 330-0006, at a cost of \$3.00 per series. In general, *CANSIM* provides a longer historical series. For further information on *CANSIM* call 1-800-263-1136.

## Revision

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

## Acknowledgements

This publication was prepared under the direction of:

- **Richard Evans**, Director, Prices Division
- **Leon Comeau**, Chief, Production, Goods and Construction Prices Section

## Highlights

---

- The Industrial Product Price Index (IPPI) remained unchanged in October, following a 1.2% decline in September.
- The contraction of prices for petroleum and coal products accelerated with a 13.8% decrease, compared to the 4.5% decline observed in September. The drop in prices for petroleum products was the strongest since September 2006.
- However, the 2.2% increase for the group of products excluding petroleum and coal entirely offset the effect of the price reductions. This increase was mainly attributable to the exchange rate effect.
- In October, unlike in the previous month, the exchange rate for the Canadian dollar in relation to its US counterpart had a major impact on the IPPI. The Canadian dollar lost 12.0% of its value in relation to the US dollar, which is an all-time record since 1950. Some Canadian producers that export their output to the United States are generally paid in US dollars, and because of the relative strength of the US dollar in relation to the Canadian currency, this had the effect of inflating their prices. If the exchange rate used to convert these prices had remained unchanged, the IPPI would have declined 3.4% compared with September instead of remaining unchanged.
- Among products excluding petroleum and coal, 13 major groups out of 20 registered gains. Much of the increase came from the prices for motor vehicles and other transport equipment, which rose 7.9%.
- Year over year, the IPPI rose 9.5% in October, which marks an acceleration in the growth of prices compared to the 8.2% gain posted in September.
- Prices for products excluding petroleum and coal continued their advance with a fifth consecutive acceleration, and they registered their strongest increase (+8.4%) since April 1995. Motor vehicles and other transport equipment, chemical products, and pulp and paper contributed the most to the annual increase in the price index for products excluding petroleum and coal.
- Stronger growth of prices was mainly driven by the depreciation of the Canadian dollar in relation to the US dollar. The Canadian dollar lost 21.5% year-over-year, compared to the 3.2% drop observed in September. If the direct effect of the exchange rate were excluded, the IPPI would have increased 3.5% instead of 9.5%.
- Prices for petroleum and coal products, while contributing significantly to the year-over-year advance of the IPPI, registered an increase of only 19.1% compared to the 37.3% gain in September.
- The Raw Materials Price Index (RMPI) fell 12.5% in October, a much stronger decline than the 7.3% drop posted in September. The RMPI registered a third consecutive negative month.
- Mineral fuel prices continued their contraction, declining 18.7% in October after two monthly drops of about 11%. If mineral fuels were excluded, the RMPI would have declined 4.2%, which is also a much larger drop than the 1.9% posted in September. The decline in October was a result of a sharp drop in prices for non-ferrous metals and vegetable products.
- Compared with October 2007, raw materials declined 0.2%, their first year-over-year decrease since February 2004. The decrease in raw materials prices was caused by a substantial 31.8% drop in the prices for non-ferrous metals, as a result of a contraction in world demand and a build-up of inventories for these various metals.

## Analysis

---

### **IPPI: The effect of falling petroleum prices was offset by the weakness of the Canadian dollar**

The industrial price index remained at the same level in October, after registering a strong decrease of 1.2% in September.

The contraction of prices for petroleum and coal products accelerated after two months of declines with a drop of 13.8%. This was the strongest drop since September 2006. The weakness of international demand for natural resources exerted downward pressure on the prices for petroleum products and metals. Furthermore, the reduction in prices for natural resources caused the Canadian dollar to fall sharply against its US counterpart, which had the effect of inflating the prices of some Canadian exporters and cancelling out the effect of falling prices for petroleum and metals on the IPPI.

The downward trend in prices for primary metal products strengthened with a 3.7% reduction. The main metals were affected by a decrease in demand and an increase in inventories. In particular, copper and copper alloys and nickel products declined respectively 21.2% and 26.7%. By contrast, increased demand for gold pushed up the metal, along with precious metal basic manufactured shapes and gold and gold alloys, which rose by 17.6% and 14.9% respectively.

The Canadian dollar fell 12.0%, and since the sales contracts of some exporters are denominated in US dollars, producers benefited from prices inflated by currency conversion. If the exchange rate effect were excluded, the IPPI would have fallen 3.4% instead of remaining unchanged.

Prices for motor vehicles and other transport equipment made the greatest upward contribution with an increase of 7.9%, the highest rate in the past 27 years. The automotive sector is the most sensitive to exchange rates. Smaller increases were observed for pulp and paper products (+5.2%), electrical and communication products (+4.1%), chemical products (+2.1%) and machinery and equipment (+2.9%).

### **IPPI: 12-month change shows stronger growth for industrial prices and a seventh consecutive increase**

Year over year, the upward trend in the IPPI accelerated, rising 9.5% compared to 8.2% in September. This is the highest year-over-year rate for the IPPI since March 1995.

Prices for motor vehicles and other transport equipment, petroleum and coal products, chemical products and pulp and paper products contributed the most to the increase in the IPPI. Petroleum and coal products rose 19.1%, down sharply from the increases of 37.3% registered in September and 46.2% in August. With the exception of petroleum and coal products, other products rose 8.4%, up from the rate of 4.8% registered in September.

Year over year, the effect of a declining Canadian dollar added to the impact of rising petroleum prices. The Canadian currency lost 21.5% of its value in relation to the US dollar, which had the effect of pushing up the prices for motor vehicles and other transport equipment (+14.5%), as well as pulp and paper products (+15.7%). Also, the price for newsprint and other paper stock was pushed up by strong export demand, and that index climbed 27.0%.

Prices for chemical products rose 18.2%, continuing the upward trend that began in February 2007. All major groups in the chemicals sector posted gains, indirectly pushed up by rising petroleum prices. Industrial chemical products advanced 20.0%, including organic chemicals (+24.6%), synthetic resins (+18.6%) and inorganic chemicals (+17.4%). As a direct result of biofuel production, fertilizers surged 92.4%.

## **RMPI: Decline of raw material prices accelerates with third straight monthly drop**

The downward trend in raw material prices continued and strengthened with a 12.5% decline in October. The RMPI was pushed down by mineral fuels and, to a lesser extent, by non-ferrous metals and vegetable products.

Prices for mineral fuels fell 18.5% in October. This was a larger decrease than in the previous two months, when there were reductions of around 11%. If mineral fuels were excluded, the RMPI would have registered a 4.2% decrease compared to a 1.9% drop in September, which is also an acceleration of the downward trend for products other than mineral fuels.

Prices for non-ferrous metals reacted strongly to the drop in international demand resulting from the general slowdown in world economic growth. Non-ferrous metals fell 10.8%, a marked change from the 1.5% decrease in September. All metal groups registered declines, with the exception of precious metals. The strongest declines were for copper and nickel concentrates (-22.3%), radioactive concentrates (-11.5%) and zinc concentrates (-13.8%).

Prices for vegetable products decreased 8.9%, as a result of lower prices for oilseeds (-12.7%), grains (-10.6%) and natural rubber (-21.7%). Oilseed and grain prices continued their decline, still reacting to increased supply in Western Canada and the contraction of world demand for oil.

Year over year, raw material prices registered their first decrease (-0.2%) since February 2004. Compared to September, raw material prices were mainly pushed down by the strong decline of prices for non-ferrous metals (-31.8%) and the marked slowdown in the increase of mineral fuel prices (+6.5%). If mineral fuels were excluded, the RMPI would have declined 6.9%, which would have been steeper than the 2.3% decrease registered in September.

### **Note to readers**

The **Industrial Product Price Index (IPPI)** reflects the prices that producers in Canada receive as the goods leave the plant gate. It does not reflect what the consumer pays. Unlike the Consumer Price Index, the IPPI excludes indirect taxes and all the costs that occur between the time a good leaves the plant and the time the final user takes possession of it, including the transportation, wholesale, and retail costs.

Canadian producers export many goods. They often quote their prices in foreign currencies, particularly for motor vehicles, pulp and paper products, and wood products. Determining the full effect of fluctuating exchange rates on the IPPI is a difficult analytical task. However, it should be noted that many prices collected to calculate the IPPI are quoted in US dollars and then converted into Canadian dollars. Therefore, a rise or fall in the value of the Canadian dollar against its U.S. counterpart affects the IPPI.

The **Raw Materials Price Index (RMPI)** reflects the prices paid by Canadian manufacturers for key raw materials. Many of these prices are set in a world market. Unlike the IPPI, the RMPI includes goods not produced in Canada.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.

**Note(s):** Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.

**Note(s):** Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.

**Note(s):** Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.

**Note(s):** Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.

**Note(s):** Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.

**Note(s):** Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.  
 2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.  
**Note(s):** Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.

**Note(s):** Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.

**Note(s):** Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.

**Note(s):** Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.

**Note(s):** Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.

**Note(s):** Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.

**Note(s):** Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.

**Note(s):** Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.

**Note(s):** Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.  
 2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.  
**Note(s):** Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.

**Note(s):** Indexes for the most recent six months shown are subject to revision.

## Industrial Product Price Indexes (1997=100)

---

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 980 Principal Commodity Group Aggregates (PCGA) outputs as defined in the 1997 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about four weeks after the reference month in Statistics Canada's *The Daily* (catalogue no. 11-001-X) following a pre-announced schedule of release dates. Simultaneously, all the indexes become available on CANSIM in tables 329-0038 to 329-0049 or by request.

Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

### Price surveys

About 9,000 prices are collected monthly from about 3,000 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure. Important producers are «must take» respondents. A random selection is taken from the smaller producers. These samples are redrawn on a regular cycle as dictated by changes in the market. A directly surveyed elemental index is usually supported by 12 to 15 price quotes. An index may be derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 980 PCGAs in the manufacturing sector are accommodated by direct survey and these account for about 90% of the value of manufacturing output in 1997. The price movement for the other PCGAs is estimated indirectly from either directly priced PCGAs or through borrowing price movement from other price series.

### Weight base

Commodity and industry weights are taken from the «Make» matrix of the 1997 Input/Output table which, in turn, is derived from 1997 values reported for the Survey of Manufacturers and edited to conform to the 1997 North American Industry Classification System. However, each December, company/product weights within a commodity index can be changed in order to reflect important changes in production patterns.

### Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where  $w^i$  are the values of the output of each commodity:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$  denotes the composite price index movement between the base period  $o$  and time  $t$  for the defined aggregate;

$w^i$  is the transaction value of the element  $i$  in the base period;

$P_{t/o}^i$  is the price index for element  $i$ , meaning its price change from the base period to time  $t$ ;

$\sum_i$  indicates summation over all elements  $i$  in the defined aggregate.

## Historical data

Historical series on the 1997 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1997 North American Industry Classification System (NAICS) and for commodity indexes classified under the Principal Commodity Group Aggregates (PCGA) classification. The historical series were obtained by linking together movements from the 1997-based Industrial Product Price Indexes (IPPI) series and the corresponding 1992-based Industrial Product Price Indexes (IPPI) series, using 1997 as the linking period. A set of concordance tables between both sets of IPPI series are available to the public.

## Reference documents

### 62-558-X **Industry Price Indexes, 1986=100: Users' Guide**

This publication describes briefly the economic content of the series and presents a short description of different aggregations produced. In the tables the weighting patterns (1986) for both commodities and commodity groupings are shown. Descriptions of the characteristics of the elemental indexes are provided. Comments on index use are also provided.

### 62-556-X **Industrial Product Price Indexes, 1981=100, Concepts and Methods**

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures. A glossary of terms is also provided. This product is not available electronically but a copy may be obtained through the Prices Division Client Services Unit (see contact information below).

## Raw Materials Price Indexes (1997=100)

---

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (for example, metal scrap). For example, wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1997 time base, are published monthly in Statistics Canada's The Daily approximately four weeks after the end of the reference month. They are also available at that time on CANSIM in table 330-0006.

### Historical data

The new historical series were obtained by linking together movements from the 1997-based Raw Material Price Indexes (RMPI) series and the corresponding 1992-based Raw Material Price Indexes (RMPI) series, using the year 1997 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both sets of RMPI series are available to the public.

### Coverage

The index covers purchases of imported and domestically produced goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser. While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing as occurred for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

### Weight base

Weights were derived from the 1997 Input/Output tables which provide values at purchasers' prices of commodities purchased as intermediate inputs.

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

## Formula

Indexes for aggregates of individual raw materials are calculated according to the following formula:

$$P_{t/o}^{(\text{agg})} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(\text{agg})}$  denotes the composite price index movement between the base period  $o$  and time  $t$  for the defined aggregate;

$w^i$  is the transaction value of the element  $i$  in 1997;

$P_{t/o}^i$  is the price index for element  $i$ , meaning its price change from the base period  $o$  to time  $t$ ;

$\sum_i$  indicates summation over all elements  $i$  in the defined aggregate.

## Electric Power Selling Price Indexes, Non-residential (1997=100)

---

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 kW and for sales of 5000 kW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1997 as a time reference base and the weights used are 1992 company revenues from sales of electricity, as collected by Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described in the explanation of methods used for the Industrial Product Price Indexes, 1997=100. The indexes are available on CANSIM in table 329-0050. Indexes for the current year and the previous year are subject to revision.
