Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

Table of contents

Foreword

The National Apprenticeship Survey (NAS) 2007 looks at factors affecting the completion, certification and transition of apprentices to the labour market. It builds on the content and experience gained through two previous surveys on apprentices, the first completed in 1989 and 1990 and the second in 1994 and 1995. The 2007 survey was a collaborative effort on the part of Human Resources and Social Development Canada (HRSDC), apprenticeship authorities in each of the provinces and territories, and Statistics Canada. The work was carried out under the guidance of the Canadian Council of Directors of Apprenticeship (CCDA).

Many academics and various stakeholders contributed to the design of the survey instrument. Most importantly, this report would not have been possible without the 30,000 current and former apprentices who took the time to respond to the survey questionnaire.

Work on the 2007 survey began in 2005. Provincial and territorial governments provided guidance regarding the kind of information to be collected and relevant data concerning apprenticeship registrations in the respective jurisdictions. HRSDC contributed the financial resources to execute the 2007 NAS and, in its capacity as a CCDA member managed the external advisory process necessary for the design of the survey. Statistics Canada provided survey design expertise and administration capabilities to carry out the survey.

This national report, along with similar reports that are available for each province and territory, form the first group of reports to be published from the 2007 survey data. Topic-specific monographs will form the second series of reports, to be released in 2009. It is hoped that the findings will contribute to the ongoing dialogue by governments, industry and unions to ensure that the apprenticeship systems in Canada continue to respond to the demands of the 21st century.

HRSDC, the CCDA and Statistics Canada wish to thank all who participated in developing and responding to the survey.

Introduction

Skilled tradespeople play an important role in the Canadian economy and are essential to building and maintaining Canada's competitive position in the global knowledge-based economy. Statistics Canada's 2006 census reported that almost 12%[1] of the people in the country's labour force have a background in the skilled trades obtained either through apprenticeship, a trade certificate or a trade diploma. Skilled trades workers are present in a wide range of sectors across the country such as automotive repair, construction, transportation, oil and gas extraction, other natural resources development, and the aerospace industry, to name a few. This speaks to the importance of the skilled trade labour force.

Apprenticeship training is the primary method to train Canada's skilled trades workers. It is a well-established method of acquiring skills and gaining knowledge necessary to become a skilled tradesperson through a combination of practical on-the-job training (80%) and intensive in-school technical training (20%). Provinces and territories are responsible for regulating and administering apprenticeship programs and certifying tradespeople. The federal government works together with the provinces and territories through the Canadian Council of Directors of Apprenticeship in supporting the development of a highly-skilled and adaptable workforce in the skilled trades as well as facilitating interprovincial mobility in the trades. In response to the existence of over 200 apprenticeable trades in Canada, the federal, provincial and territorial governments established the Interprovincial Standards Red Seal Program in the mid-1950's. This is a collaborative initiative designed to facilitate interprovincial mobility of skilled trades workers through the harmonisation of trades training requirements and certification based on interprovincial examinations. Today there are 49 skilled trades covered under the Red Seal program and these trades represent over 90% of all apprentices. Industry plays an important role in the delivery and shaping of apprenticeship training across the country, including the Red Seal Program. Learning institutions, unions and private trainers deliver in-school technical training to apprentices, an essential part of apprenticeship systems.

Many years of strong economic growth in Canada have resulted in increased labour market demand for highly skilled and trained tradespeople and Canada's apprenticeship systems have responded. Registration in apprenticeship programs has increased to record levels. In 2005, a total of 245,180 individuals were registered in apprenticeship programs across Canada, an increase of 52% since 2000[2].

Despite an increase in the number of individuals registering in apprenticeship programs, the number of people completing apprenticeship programs each year has changed very little over the past several decades. In 2005, a total of 20,555 individuals completed an apprenticeship program, an increase of only 12% since 2000[3].

There are many reasons why an apprentice may discontinue an apprenticeship program or take longer than average to complete an apprenticeship. In the past, the principal reason apprentices discontinued their programs was a shortage of work. With current labour market conditions, this should no longer be such a major factor.

Added to this issue are the demographic pressures that exist in the skilled trades labour force. The median age of individuals in the trades has been increasing steadily, and the number of retirements is expected to be significant over the next decade. Given the ageing skilled trade labour force and the flat completion numbers, a shortage of workers in the trades in some regions of Canada may develop in the coming years. As well, not all Canadians are participating fully in apprenticeship. Ensuring access to apprenticeship and employment in the skilled trades among Aboriginal peoples, women, visible minorities and foreign-trained skilled trade workers is essential to building and maintaining both apprenticeship and the needs of the Canadian economy.

This suggests that while apprenticeship has served the needs of the Canadian economy well, current apprenticeship systems need to evolve in response to the changing demands of individual apprentices, employers and the knowledge-based economy. This much anticipated 2007 NAS survey provides a glimpse of the motivations that led apprentices to choose careers in the skilled trades and insights into how apprentices perceived their apprenticeship and post-apprenticeship labour market experiences. These are important findings which will contribute to ensuring that the apprenticeship systems in Canada remain strong and robust.

The survey

The 2007 NAS was a telephone survey done by Statistics Canada to gather information on the training and employment experiences of apprentices across Canada. The sample population for the survey was randomly selected from a list of people who were registered as apprentices with their provincial or territorial authorities during the period of 2002 to 2004. A total sample of 67,000 respondents was targeted. Please refer to Appendix 3 for the description of the 2007 NAS survey methodology.

Survey respondents were selected based on apprenticeship status in 2002, 2003 or 2004 as reported by provincial or territorial jurisdictions. The three groups of apprentices were:

- Long-term continuers: people who were still a registered apprentices in 2004 *and* who had been registered apprentices for more than one and a half the prescribed duration time required to complete their apprenticeship programs *and* who had not earned their certification by 2004.

- Completers: people who had been registered apprentices *and* had completed their apprenticeship programs (with or without certification) at some point during 2002 to 2004.

- Discontinuers: people who had been registered apprentices at some point in the past *and* had discontinued their apprenticeship programs between 2002 and 2004.

In the context of the survey itself, respondents confirmed their apprenticeship status by answering a set of screening questions at the beginning of the NAS questionnaire. Their status in 2007 determined the sequence of questions they were subsequently asked.

The screening questions used to categorize respondents were designed to help capture information about the various pathways followed by people pursuing trade

qualifications through apprenticeship programs. While the apprenticeship programs are typically structured with two types of required training (in-class and on-the-job) followed by exams and certification, apprenticeship is a flexible system with many entry points and routes to completion. Some people work in a trade for a number of years before registering and taking their in-class training. Others, who have enough work experience, may challenge the examination *without* registering as apprentices or completing in-class training thus becoming trade qualifier. This accounts for the presence in the survey results of less traditional pathways to become a journeyperson like the discontinuers with certification.

The last apprenticeship survey, the 1995 National Apprenticed Trades Survey (NATS), focused only on two groups of apprentices: "completers," those who had completed their apprenticeship programs; and "discontinuers," those who had dropped out of their programs before completion.

The 2007 survey included additional components and questions designed to address new issues and research topics related to the current context of apprenticeship in Canada. The survey also added a new group of apprentices, "long-term continuers," those who had remained in their programs for one and a half the expected time or longer mainly to try to understand why some apprentices take longer to complete their apprenticeship programs. Thus the survey focused on three groups:

- Long-term continuers,
- Completers – those who completed the program during 2002 to 2004, and
- Discontinuers – those who dropped out of their program during 2002 to 2004.

Expanding on the previous survey, the 2007 NAS aimed to investigate the factors affecting apprentices' completion and certification, and to measure their transition to the labour market. The specific objectives were to better understand:

- why some registered apprentices do not complete their programs,
- how completion affects the labour market outcome of trainees, and
- why some apprentices take much longer than expected to complete their programs.

Between January and May 2007, the survey collected information from the three groups of apprentices. Each group was asked a common set of questions as well as a separate set of questions specific to their situations. The questions focused on the following areas.

- Pre-apprenticeship educational, training, and work experiences
- Experiences concerning technical training and work as an apprentice
- Reasons why discontinuers do not complete their program
- Difficulties encountered during apprenticeship
- Experience with the certification process
- Employment since the apprenticeship program
- General social-demographic characteristics

About half of the 1995 questionnaire content was considered to be still relevant to the current context of apprenticeship programs and was adapted for use in the 2007 NAS. In addition the 2007 survey included a component on apprentice mobility to respond to the emerging issue of apprentices migrating from one jurisdiction to another during or after their programs, and a component to examine the apprenticeship experiences of newcomers to Canada.

For information on the methodology of the survey such as target population, frame and sample design, data accuracy and response rates, please refer to Appendix 3.

Users and purpose of data

The data presented in this report will allow reviewers to compare labour outcomes for discontinuers and completers, identify reasons for interest and obstacles to registration, study barriers to completion by trade, and analyze the perception of the apprentice on their in-class and on-the-job training. It will also help answer questions about the mobility of apprentices during and after their programs.

The CCDA and its members can use the survey data to improve programs and to assist policy formation. Provincial and territorial apprenticeship authorities should be able to use the findings to evaluate their respective programs. In addition the results could be used to monitor factors affecting apprenticeship and to identify topics for future research.

Section 1

Profile of the apprentices:

Long-term continuers, completers and discontinuers

Change in apprenticeship program status between 2002, 2003, 2004 and 2007

The nature of the National Apprenticeship Survey provides a unique opportunity to explore the dynamics of apprentice' movement in and out of an apprenticeship program between 2002 and 2007. As mentioned in the Introduction, provincial and territorial administrative data were used to identify three groups of individuals based on their apprenticeship program status as of 2002, 2003 and 2004. These three groups of interest included apprenticeship program completers, long-term continuers and discontinuers, status assigned to the apprentices by the jurisdictional apprenticeship authority. A few years later, in 2007, the NAS collected updated information on the program status for each of these three groups of individuals, based on the self-identification of the apprentice. It was expected that many apprentices would have a different status in 2007 in comparison to their status in 2002, 2003 and 2004. These differences are mostly due to a real change of status between those two periods for the apprentices while some could be due to errors on the administrative records of the apprenticeship authority or by errors in self-identification of their status by the apprentice.

Movement through apprenticeship programs is dynamic and does not necessarily occur in a linear fashion as summarized in Figure 1.1 (see Appendix 1 Table A.1.1.1). Approximately one-third of long-term continuers as of 2004 had completed their apprenticeship program by 2007, 56% were still pursuing their program while only 8% had discontinued their apprenticeship program.

It was expected that completers identified as such by the apprenticeship authority in 2002, 2003 and 2004 were to self-identify themselves as such in 2007. However, even if the majority of the completers (89%) were still in that same group in 2007, 5% self-identified themselves as long-term continuers and 6% as discontinuers. These discrepancies, as explained above, could be due to a mis-identification of their own status by the apprentice or an error on the administrative record.

Almost 60% of those who had discontinued an apprenticeship program as of 2004 had returned to an apprenticeship program by 2007 at which time they had either completed or were still enrolled in an apprenticeship program (26% and 38% respectively). Slightly over one-third of discontinuers as of 2004 had remained a discontinuer three years later in 2007.

The 2007 NAS revealed an important finding with respect to the qualifications of individuals who had discontinued their apprenticeship program as of 2007. In general there are two mechanisms through which individuals can receive trade certification. The most widely used mechanism is to complete an apprenticeship program consisting of on-the-job training and classroom based studies after which time an individual would sit a trade certification examination. Alternatively, it is possible for an individual to sit a trade certification examination without having first completed an apprenticeship program, providing an individual has acquired a significant amount of time working in the trade. In this context, the 2007 NAS revealed that approximately one-fifth of those who were classified as discontinuers had in fact completed their trade certification. This group represents those who, although not having completed an apprenticeship program, have successfully passed a certification exam qualifying them as journeypersons.

It should be noted that throughout the rest of this report the term discontinuers includes those who discontinued their apprentice program but successfully passed a certificate exam qualifying them as journeypersons.

Figure 1.1

Apprentice status in 2002 to 2004 versus 2007, Canada, National Apprenticeship Survey, 2007

Apprenticeship status 2000 to 2004			Apprenticeship status in 2007	
Long-term continuers 2002 to 2004	Long-term continuers 2007	**56%**	With minimum requirements	**38%**
			Without minimum requirements	**18%**
	Completers 2007	**36%**	With certification	**28%**
			Without certification	**8%**
	Discontinuers 2007	**8%**	With certification	**2%**
			Without certification	**6%**
Completers 2002 to 2004	Long-term continuers 2007	**5%**	With minimum requirements	**5%**
			Without minimum requirements	**0%**
	Completers 2007	**89%**	With certification	**89%**
			Without certification	**0%**
	Discontinuers 2007	**6%**	With certification	**6%**
			Without certification	**0%**
Discontinuers 2002 to 2004	Long-term Continuers 2007	**38%**	With minimum requirements	**17%**
			Without minimum requirements	**21%**
	Completers 2007	**26%**	With certification	**14%**
			Without certification	**12%**
	Discontinuers 2007	**37%**	With certification	**3%**
			Without certification	**34%**

Profile of long term-continuers, completers and discontinuers

The demographic characteristics for each of the three apprentice groups are summarized in Appendix 1 Tables A.1.1.2 to A.1.1.8. Among the three groups of apprentices a "typical apprentice" is male, under 35 years old, non-Aboriginal, non-immigrant, non-visible minority, with no history of disability, and is apprenticing in a Red Seal designated trade. While these three groups share similarities in terms of their demographic characteristics, as summarized below there are some differences across groups.

Age, gender and minority status

The age distribution for each of the three groups of apprentices is shown in Chart 1.1 below. Discontinuers were more likely to be in the youngest age-group with twice as many discontinuers being less than 25 years old compared to completers (13% versus 6% respectively). Long-term continuers tended to be older with 34% of this group being 40 years of age or older compared with 21% of completers. In contrast, near 60% of completers were between the ages of 25 to 34 compared with 44% of long-term continuers and 49% of discontinuers (see Appendix 1 Table A.1.1.2). The age profile of the three apprentice types is not surprising given that, by definition, long-term continuers spend more time in a program while discontinuers leave their program early.

Chart 1.1

Age distribution by apprentice status, Canada, National Apprenticeship Survey, 2007
Only one in ten apprentices across the three apprentice groups was female reflecting the fact that women are underrepresented in apprenticeship programs. The NAS reveals that women apprentices appear to have more success in reaching completion as they represented a relatively higher proportion of completers: 11% of completers were women compared to 9% of long-term continuers and discontinuers (see Appendix A Table A.1.1.2).

The proportion of apprentices who self-identified as being of aboriginal descent was between 4% and 5% across the three apprentice groups (see Appendix 1 Table A.1.1.2) comparable with 5%[4] of the Canadian population. On the other hand, the immigrant population was underrepresented across the three apprentice groups representing between 3 to 5% of each apprenticeship group compared to 20%[5] of the Canadian population. Apprentices identifying themselves to a visible minority were also underrepresented across the three apprentice groups representing between 5 to 7% of each apprenticeship group compared to 16%[6] of the Canadian population.

Province or territory of residence and registration

In this section, the distribution of province of registration across apprentice groups is examined. The distribution of province of residence is similar (see Appendix 1 Table A.1.1.3).Within each of the three apprentice groups, the majority of apprentices were registered in Quebec, Ontario and Alberta. If there were no jurisdictional differences in the program status of apprentice registrants, one would expect to see the same provincial distribution across all three apprentice groups. However, since there are observed differences in the relative provincial composition of long-term continuers, completers and discontinuers, the NAS results reveal different patterns of program status outcomes across jurisdictions. For example as shown in Appendix 1 Table A.1.1.3, in Newfoundland and Labrador, a relatively higher percentage of program registrants were long-term continuers (6%) relative to completers (2%) and discontinuers (2%). In Quebec, a relatively lower proportion of registrants were completers (17%) relative to long-term continuers (28%) and discontinuers (28%). In Ontario, a relatively higher percentage of registrants were long-term continuers (35%) and a relatively lower percentage were discontinuers (16%) while in Alberta, it is the contrary, a relatively higher percentage of registrants were discontinuers (31%) while a relatively lower proportion were long-term continuers (13%). These differences could be due to the differences on how each jurisdiction runs their apprenticeship programs.

Highest level of education prior to apprenticeship registration

The level of education held by apprentices upon entering the apprentice program appears to be related to their program outcome. As shown in Chart 1.2 (see Appendix 1 Table A.1.1.5 in), the distribution of highest education level attained prior to entering an apprenticeship program varied across apprentice groups. Almost twice as many long-term continuers had less than a high school diploma compared to completers (22% versus 12% respectively). In contrast, a higher proportion of apprentice program completers had previously completed college or had completed high school when compared with long-term continuers and discontinuers. The education profile of discontinuers was in-between that of the long-term continuers and the completers.

Chart 1.2

Highest level of education before beginning apprenticeship program by apprentice status, Canada, National Apprenticeship Survey, 2007
Employment income

The NAS showed that apprentices who completed their program fared better in terms of total employment income in the 12 months preceding the survey (referring to 2006) as seen in Appendix 1 Table A.1.1.6. Almost three-quarter of the completers had an annual income higher than the median annual earnings of Canadians in 2005 of $41,041[7], while this proportion is of 54% for discontinuers and 48% for long-term continuers, As shown in Chart 1.3, when comparing annual earnings of $60,000 or more, 40% of completers reported having this income compared with 27% of discontinuers and 18% of long-term continuers. Overall, discontinuers fared somewhat better than long-term continuers, primarily because of a higher proportion (13%) who earned $80,000 or more. This could be explained by the fact that long-term continuers are still pursuing their apprenticeship program.

Chart 1.3

Distribution of all the employment income of the last 12 months by apprentice status, Canada, National Apprenticeship Survey, 2007
Union participation

The data on union participation before, after and throughout apprenticeship programs is shown in Appendix 1 Table A.1.1.7.1. The majority of each apprentice group was not in a union either before or after their apprentice program (68%, 63% and 57% respectively for long-term continuers, completers and discontinuers).

The proportion of apprentices who were members of union either before or after this program was highest for discontinuers at 42% compared with completers (37%) and long-term continuers (32%).

When looking at the time at which union participation was established, the most common pattern for both completers and discontinuers was union membership at both the beginning and the end of the program (23% of completers and 27% of discontinuers). Among program completers, the next most common pattern was union membership at the end of their program (10%) while only 4% of completers were union members only at the beginning of their program. In contrast, a similar proportion of discontinuers had union membership only at the beginning of their program, (8%) or only at the end of their program, (7%).

The data on the type of union membership of the apprentices *notwithstanding* of the time of their membership is shown in Appendix 1 Table A.1.1.7.2. Across the three groups of apprentices, greater proportions of apprentices were members of a construction union than any other unions: 76% for long-term continuers, 66% for completers and 75% for discontinuers.

Section 2

Factors influencing interest and registration in apprenticeship trades

The decision to pursue a specific trade may be influenced by one's interest in the trade which can be sparked by a variety of factors. In order to obtain a better understanding of what sparks interest in trades, the NAS collected information on the main factors that influenced apprentices' interest in their trades. As summarized in Chart 2.1 (see Appendix 1, Table A.1.2.1), the main factors which influenced one's interest in the trade were similar across apprentice groups.

Contact with people exposed to the trade was the most common factor which influenced apprentices' interest in their trade. Half of each apprenticeship group reported that family members or friends in the trade, teachers or counsellors, employers, co-workers, union representatives, or any other tradespeople influenced their interest in a trade.

The next two most frequently cited factors influencing apprentices' interest in the trade were knowledge of the trade from prior job or work experience reported by 28% of each apprentice group, followed by a hobby related to the trade reported by 23 to 25% of each apprentice group.

Between 12 to15% of each apprentice group became interested in a trade though their high school or post-secondary studies while an additional 8 to 10% became interested through their high school work experience or co-op programs. Advertising, media campaigns print and on-line information, and job postings were not strong factors in influencing interest being reported by only about 3% of each group.

Chart 2.1

Main factors influencing interest in the trade for all apprentice groups combined, Canada, National Apprenticeship Survey, 2007
Reasons to register in the trade

The NAS also collected information on the factors that influenced registration in a trade. The main factors which influenced registration in the trade were similar across apprentice groups as shown in Chart 2.2 (see Appendix 1 Table A.1.2.2).

The three most commonly cited factors influencing registration were interest in or enjoyment of the trade, good salary expectations and job stability or security. Approximately half of each apprentice group reported that their registration was influenced by their trade or line of work or because they liked the working conditions, enjoyed or liked the work or trade. A further 21 to 24% of each apprentice group were influenced by the expectation of good pay, better wages, or a pay increase. Eleven percent registered because they expected steady work or saw career opportunities because of strong demand for that trade.

Eleven percent of apprentices in each group registered because they had prior knowledge, experience, or qualifications in the trade. Even fewer respondents registered because of a recommendation from someone at school or on a job.

Union benefits and the hope of owning a business were the least cited reasons for registration.

Chart 2.2

Factors influencing registration in a trade for all apprentice groups combined, Canada, National Apprenticeship Survey, 2007
Prior work done in the trade before registration

The NAS collected information on whether apprentices had trade related work experience or technical training prior to registering for an apprentice program. As shown in Appendix 1 Table A.1.2.3, the majority of each apprentice group had work experience in the trade prior to registration. This proportion was slightly lower for discontinuers (58%) while the proportion was similar for long-term continuers (63%) and completers (62%).

At least 40% of each apprentice group had prior technical training in the trade. This proportion was highest for completers (49%) and lowest for discontinuers (41%).

Section 3

Challenges, support and difficulties experienced by apprentices

Apprenticeship program completion or discontinuation can be influenced by a variety of factors throughout the stages of the apprenticeship program. This section explores the perspectives of apprentices concerning the barriers, challenges and support received in order to access, maintain and complete their apprenticeship program.

Difficulties related to finding employers for first apprenticeship programs

The majority of all three groups of apprentices (83%) did not encounter difficulties related to finding an employer for their first apprenticeship program and difficulties in finding an employer did not appear to be related to program success since an equal proportion of long-term continuers, completers and discontinuers (17%) reported difficulties (see Appendix 1 Table A.1.3.1.1).

The challenges encountered by apprentices who had difficulty finding and employer for their first apprenticeship program was similar across the three apprenticeship groups (see Appendix 1 Table A.1.3.1.2). The most common reason for difficulties was a lack of employers hiring (average of 36%), no work available in the trade (average of 22%) and lack of experience or knowledge (average of 16%). Discrimination or union issues were not widely reported as reasons for difficulties in finding employment.

Challenges or obstacles encountered during the apprenticeship program

Almost all apprentices across the three apprentice groups indicated that they encountered an obstacle during their apprenticeship program. As shown in Appendix 1 Table A.1.3.2, obstacles relating to income, inconsistent work and program costs were the most frequently cited obstacles among apprentices while obstacles surrounding transportation, injury and family or personal problems were not widely reported.

Several obstacles that were commonly reported do not appear to be related to program discontinuation. For example, among the three apprentice groups, the most commonly cited obstacle encountered during apprenticeship training was insufficient income or delays in funding including employment insurance payments and training allowances. However, it does not appear that this obstacle derailed program success since a higher percentage of completers (38%) reported this as an obstacle compared with long-term continuers (31%) and discontinuers (29%). Similarly a notable proportion of apprentices reported that program costs (such as costs of tools, tuition fees, books, no tool allowances or costs not being tax deductible) were an obstacle during their

program yet it did not appear to derail program success since a higher percentage of completers (26%) reported this as a barrier compared to long-term continuers (22%) and discontinuers (18%).

On the other hand, it does appear that some obstacles may be associated with program discontinuation. For example, inconsistent work or a lack or work was reported by 30% of discontinuers compared with 22% of program completers. Additionally, a lack of awareness of how the apprenticeship system works, no credits for prior work or technical training, problems with apprenticeship board and programs (including paperwork, administration, communication, lack of information, cancellation, lack of classes) was reported by 21% of discontinuers compared with 16% of completers.

Help received other than training allowances and employment insurance

Almost all (99%) of apprentices received some form of help other than training allowances and employment insurance during their training. Among the type of help received, (see Appendix 1 Table A.1.3.3) the most commonly cited was receiving wages or other financial assistance during technical training sessions, whether from the employer, union, government, apprenticeship board, or Band Councils. Twenty-five percent of completers received this type of support compared to 19% of long-term continuers and 17% of discontinuers.

Additional wages above the legally stipulated minimum for apprentices followed by transportation, parking and travel expenses were the next two most frequently reported types of help received across all apprentice groups.

Very few apprentices reported receiving help through targeted programs such as: employer, union or apprenticeship board provided anti-harassment or workplace orientation programs; programs offered by community organizations, Aboriginal Human Resource Development Agreement, band councils or other support groups; or employee assistance to deal with harassment.

Change in employers during the apprenticeship program

The proportion of apprentices who changed their employer during their program was highest for long-term continuers (58%) and lowest for discontinuers (38%). Half of all completers changed employers during their apprenticeship program (see Appendix 1 Table A.1.3.4.1).

The reasons for changing employers were similar across all three apprentice groups (see Appendix 1 Table A.1.3.4.2). The most common reasons were that work was no longer available with that employer, the apprentice sought better conditions (such as work, income or benefits), or the employee sought a better employer or started their own business.

Main reasons discontinuers did not complete their apprenticeship programs

Chart 3.1 (see Appendix 1 Table A.1.3.5) shows that the main reason most often cited by discontinuers for not completing their apprenticeship program was because there was not enough work or insufficient income reported (16%). Ten percent of discontinuers have stopped their program because they had received a better job offer while an additional 8% of discontinuers stopped training because they disliked the work or the working conditions.

Thirty percent of discontinuers reported other reasons for not completing their apprenticeship program. This response category represents an extremely varied and diverse group of reasons that cannot be synthesized into discrete homogonous categories. This suggests that for a large portion of discontinuers the reasons for dropping out are very diverse and personalized.

A further 8% of apprentices discontinued their program because they wanted to change jobs or careers, became self-employed or lost interest. An additional 4% discontinued their studies due to employer, company, or union issues, including problems such as the employer discontinuing the apprenticeship program or not following the rules.

Very few discontinuers stopped their programs as a result of family issues (3%), because they returned to school to study in a field unrelated to the trade (3%), because the program was, a temporary job or hobby (3%), as a result of harassment or conflict at work (2%), because a certificate was not required to work in the trade (2%), as a result of an unrelated move (1%) or due to insufficient government financial aid (1%).

The cost of tools was cited the least often, indicated by less than one-half a percentage of discontinuers.

Chart 3.1

Reasons discontinuers did not complete their apprenticeship program, Canada, National Apprenticeship Survey, 2007
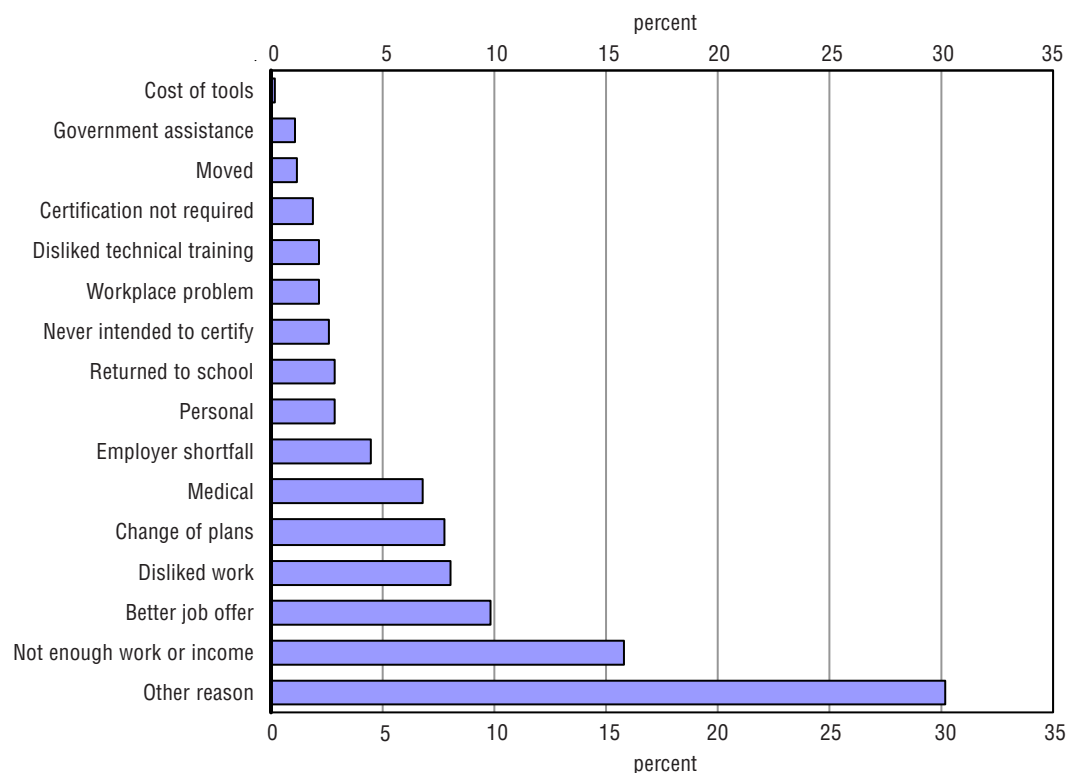

Section 4

Certification

This section analyzes the certification status of apprentices in the Red Seal trades versus non-Red Seal trades by apprentice status as compiled by NAS.

When registering in an apprenticeship program in any province or territory, apprentices ultimately aim to become journeypersons in their trade. Apprentices must pass an examination to obtain a Provincial or Territorial Certificate of Qualification, also called the "journeyperson's certificate."

To facilitate greater mobility, apprentices may obtain an additional endorsement through the Interprovincial Standards Red Seal Program, which is administered in each province and territory under the guidance of the Canadian Council of Directors of Apprenticeship. The Red Seal endorsement enables journeypersons to practice their trades in any province or territory in Canada. Of the several hundred trades practiced across Canada, 49 are Red Seal designated.

Certification in Red Seal and non-Red Seal trades

Appendix 1 Table A.1.4.1 shows that the vast majority of apprentices (94%) in all three groups were in Red Seal trades.

Since the long-term continuers, by definition, have not yet finished their programs, none are certified and data on their status is not included in this analysis. This section only focuses on completers and discontinuers.

Of the completers, only 11% were without any type of certification. Of the nearly 90% completers that hold a certification in their trade, 84% were in Red Seal-designated trades: 28% were certified for their own jurisdictions and 56% were certified for their own jurisdictions as well as recognized interprovincially through the Red Seal Program.

A much greater proportion of the discontinuers, 75%, were without any certification. Of the quarter that has a certification in their trade, 23% were in Red Seal trades: 8% were certified for their own jurisdictions and 15% were certified for their own jurisdictions as well as recognized interprovincially.

Section 5

Labour force and earnings

The NAS gathered labour force and employment information on apprenticeship program completers and discontinuers. Apprenticeship program long-term continuers are not included in this section as detailed labour force and earning information was not collected for this group, with the exception for the all employment income for the past 12 months which is presented in Table A.1.1.6 (see Appendix 1) in section 1 of this report.

Completers had better labour market outcomes than discontinuers in terms of both their employment status and their hourly wages.

As shown in Chart 5.1 (see Appendix 1 Table A.1.5.1.1) apprentice's who completed their programs were more likely to be employed at the time of the survey compared to those who discontinued their program. Eighty-eight percent of completers were employed compared with 82% of discontinuers. In contrast, discontinuers were more likely to be unemployed or out of the labour force. Among those who were employed (see Appendix 1 Table A.1.5.1.2), completers were more likely to have permanent jobs (80% versus 76% of discontinuers) whereas discontinuers were more likely to be self employed (16% versus 13% for completers).

Chart 5.1

Distribution of labour force status by apprentice status, Canada, National Apprenticeship Survey, 2007
The estimated hourly earnings of completers were better than those for discontinuers as shown in Chart 5.2 (see Appendix 1 Table A.1.5.2). Sixty percent of discontinuers earned less than $25 an hour compared with 40% of completers. In contrast, over half of completers (56%) earned between 25 to 50 dollars an hour compared with 37% of discontinuers. A similar proportion of completers and discontinuers earned more than $45 an hour (6% for each group).

The median of the hourly earnings for completers and discontinuers also shows a difference in how those two groups of apprentices fare in terms of wages. For completers, the median (where half of the completers are above this value and half are under), is $27 an hour while for discontinuers, it is $20 an hour.

Chart 5.2

Distribution of hourly earnings by apprentice status, Canada, National Apprenticeship Survey, 2007
Section 6

Mobility

There is a strong demand for skilled labour in Canadian regions experiencing economic booms, such as the Prairie Provinces in their energy and construction sectors. Labour mobility is especially relevant for these regions, which need to attract workers from other areas of the country.

Labour mobility refers to the freedom of workers to practice their occupation wherever the opportunities exist in Canada. The Agreement on Internal Trade (AIT) stipulates that any qualified worker in an occupation in one province or territory must be granted access to similar employment opportunities in any other Canadian jurisdiction. The AIT covers both professional occupations and the skilled trades.

The 2007 NAS sought to measure the labour mobility of apprentices between provinces and territories. To study apprenticeship labour mobility, the NAS asked respondents to indicate the province or territory where they lived before registering in their apprenticeship program, the province or territory where they did their apprenticeship training, and the province or territory where completers and discontinuers are currently working.

For the purpose of analysis, Tables A.1.6.1.1, A.1.6.1.2, A.1.6.2.1, A.1.6.2.2, A.1.6.3.1 and A.1.6.3.2 (see Appendix 1) were developed based on Statistics Canada's standard economic regions:

- Atlantic – including Newfoundland and Labrador, Prince Edward Island, Nova Scotia, and New Brunswick
- Québec
- Ontario
- Prairies – including Manitoba, Saskatchewan, and Alberta
- British Columbia
- Territories – including the Yukon Territory, Northwest Territories, and Nunavut

Mobility between province of residence before registration and province of registration

The NAS asked questions to compare the province or territory where apprentices registered to the jurisdiction where they had lived for the previous 12 months or more.

Appendix 1 Table A.1.6.1.1 shows that around 5% of the apprentices in each group moved to register in another jurisdiction while the majority (95%) registered in the province or territory where they had been living.

Of those who moved (see Appendix 1 Table A.1.6.1.2), 39% of long-term continuers went to the Prairies. Atlantic Canada attracted 16% and Ontario 14%. The Prairies also attracted 58% of the completers and 54% of the discontinuers.

In all three groups, about 12% of the apprentices who moved indicated that they originally lived outside of Canada and entered the country to register in their program.

Mobility between province of registration and province of apprenticeship training

The NAS also asked questions to compare the apprentices' province of registration with the province where they work or worked with an employer to do their on-the-job apprenticeship training.

Appendix 1 Table A.1.6.2.1 shows that almost all of the apprentices, about 98% of completers and discontinuers, and 95% of long-term continuers, did their on-the-job training in the province where they were registered.

Of those who moved (see Appendix 1 Table A.1.6.2.2), 55% of completers and 47% of long-term continuers and discontinuers were drawn to the Prairies, while Ontario attracted 15% of the completers, 19% of the long-term continuers, and 26% of the discontinuers.

Mobility between province of registration and current province of work

The NAS also sought to measure the mobility of apprentices who found employment after either completing or discontinuing their apprenticeship programs. The survey asked the completers and discontinuers to indicate where their current job or, if unemployed at the time of the survey, their most recent job was located and compared this with their province of registration.

Appendix 1 Table A.1.6.3.1 shows that almost all of the completers and discontinuers found work in their province of registration, 95% and 93% respectively.

Of those who moved (see Appendix 1 Table A.1.6.3.2), 56% of the completers and 43% of the discontinuers found work in the Prairies. British Columbia attracted 19% of the completers and 21% of the discontinuers, while Ontario attracted 10% of the completers and 15% of the discontinuers.

Very few of the completers and discontinuers said they left Canada to work, only 4% and 6% respectively.

Section 7

Women, Aboriginal peoples and landed immigrants

Canada's population growth rate has slowed gradually over the past few decades. As a result of this and other demographic trends, Canada faces a long-term reduction in labour force growth particularly in the trades and related job areas. The participation and retention of specific groups such as women, Aboriginal peoples and landed immigrants have long been a challenge in apprenticeship programs. NAS examined why these groups encounter more hurdles than the apprentice population as a whole.

Apprenticeship pathways

Figure 7.1.1 (See Appendix 1 Table A.1.7.1.1) compares the apprenticeship pathways followed by men and women between 2002 to 2004 and 2007.

The profiles of women and men classified as long-term continuers in 2004 are very similar. For both genders, 36% had completed their studies by 2007, while slightly over half (55% of women and 56% of men) were still in their apprenticeship programs. Roughly the same proportion of men (7 %) and women (8%) had discontinued their studies in 2007.

The profiles of those apprentices identified as discontinuers between 2002 and 2004 showed a higher completion rate for women when compared with their male counterparts. By 2007, 38% of women had become completers while only 24% of men had completed their programs.

Figure 7.1.2 (See Appendix 1 Table A.1.7.1.2) shows the comparison between the apprenticeship pathways of Aboriginal peoples versus all others in the survey.

The profiles of those classified as long-term continuers in 2004 were similar in the two groups. By 2007, 34% of Aboriginal peoples and 37% of non-Aboriginals had completed their apprenticeship and slightly over half (56% in both groups) were still registered in their apprenticeship program. Nine percent of Aboriginal peoples had discontinued their program, close to the 7% rate of non-Aboriginals.

Figure 7.1.1

Apprentice status in 2002, 2003 and 2004 versus 2007 by gender, Canada, National Apprenticeship Survey, 2007

Apprenticeship Status 2000 to 2004			Apprenticeship status in 2007	
	Women		**Men**	
Long-term continuers 2002 to 2004	Long-term continuers 2007	**55%**	Long-term continuers 2007	**56%**
	Completers 2007	**36%**	Completers 2007	**36%**
	Discontinuers 2007	**8%**	Discontinuers 2007	**7%**
Completers 2002 to 2004	Completers 2007	**88%**	Completers 2007	**89%**
Discontinuers 2002 to 2004	Completers 2007	**38%**	Completers 2007	**24%**
	Discontinuers 2007	**31%**	Discontinuers 2007	**38%**

The profiles of the apprentices who were discontinuers in 2004 showed a slightly lower completion rate for Aboriginal peoples (23%) than all of the others apprentices (26%) by 2007. The proportion of apprentices that remained discontinuers in 2007 for Aboriginal peoples and all other apprentices are similar, 36% and 37% respectively.

Figure 7.1.3 (see Appendix 1 Table A.1.7.1.3) shows the comparison of the apprenticeship pathways between landed immigrants and all other apprentices in the survey.

The profiles of those classified as long-term continuers in 2004 were similar in the two groups. For both groups, 36% had completed their programs by 2007, and over half (58% of landed immigrants and 56% of all others) were still registered in their apprenticeship programs. Fewer landed immigrants (6%) had discontinued their studies compared to all others (8%).

The profiles of the apprentices who were discontinuers in 2002 to 2004 showed a higher completion rate for landed immigrants. By 2007, 31% of landed immigrants had completed their apprenticeship program while for all of the other discontinuers only a quarter had completed their programs. A smaller number of landed immigrants were still discontinuers in 2007 (28%) when compared to the rest of the apprentices (38%).

Reasons for discontinuing apprenticeship programs

The issue of why apprentices discontinue their programs of study has long concerned program administrators and policymakers. Many factors influence apprentices. The NAS asked discontinuers from these specific groups about these factors.

Comparison between women and men

When listing the main reason for which they discontinued their apprenticeship programs, the profiles for men and women were different in a number of respects. As shown in Appendix 1 Table A.1.7.2.1, about 13% of women but only 2% of men cited family and personal reasons for discontinuing their programs. Approximately 6% of women discontinued their studies because of harassment or discrimination, disputes or conflicts of interest with employers or unions, or because they did not get along at work compared with only 2% of men.

A higher proportion of men than women (16% versus 10%) discontinued their programs because there was not enough work or their incomes were not high enough. Men were twice as likely as women to have received a better job offer (10% versus 5%). They were also twice as likely to have lost interest or changed their career plans (8% versus 4%).

Comparison between Aboriginal peoples and all other apprentices

The comparison of the main reasons for not completing their apprenticeship programs between Aboriginal people and all of the other apprentices in the survey, as shown in Table A.1.7.2.2 (see Appendix 1), reveals relatively few differences. Nearly 20% of Aboriginal peoples, compared to 16% of others, said that they discontinued their program because of not enough work or insufficient income. A proportion of 12% of Aboriginal peoples as opposed to 10% of other apprentices reported having received a better employment offer. Family and personal issues were also more predominant among Aboriginal peoples than among others (7% versus 3%).

Comparison between landed immigrants and all other apprentices

The comparison of the main reasons for not completing their apprenticeship programs between landed immigrants and other apprentices in the survey is shown in Table A.1.7.2.3 (see Appendix 1).

When compared to others, landed immigrants were somewhat less likely than others to cite not enough work or income (12% versus 16%), to have received a better job offer (8% versus 10%), or to have disliked the work or working conditions (5% versus 8%) as main reasons to discontinue their apprenticeship programs.

Section 8

Quality of Apprenticeship Training

Most apprenticeship programs require registered apprentices to follow a mix of technical training and on-the-job workforce training.

The NAS sought to determine the apprentices' overall satisfaction with their training programs and to link their responses to completion rates and retention rates in the three apprentice groups.

As part of the accreditation process, the journeyperson assigned to supervise an apprentice's work practicum must corroborate the apprentice's on-the-job training and number of hours of work experience completed. The 2007 NAS asked apprentices whether they were supervised during their programs and, if they had no supervision, how long they had worked unsupervised.

In general, either for the on-the-job training or the technical training, apprentices of all three groups found their training satisfactory and not too difficult.

Because the methods of training can differ from one provincial and territorial jurisdiction to another, the results on the quality of apprenticeship training could vary when analyzed at the jurisdictional level.

On-the-job training

As shown in Appendix 1 Table A.1.8.1.1, 80% in each of the three apprentice groups reported that they had received supervision at all times during their work terms.

Among those who had not received supervision at all times during their work terms, 33% of long-term continuers, 21% of discontinuers, and 27% of completers reported spending 20 weeks or more without supervision from an accredited journeyperson (see Appendix 1 Table A.1.8.1.2). These figures represent 4% to 6% of all the apprentices surveyed. It should also be noted that in some jurisdictions fourth-year apprentices are allowed to supervise their juniors.

Between 84% and 87% of the apprentices in the three groups did not find their on-the-job work difficult or that the journeyperson rushed when explaining duties (see Table A.1.8.1.3 in Appendix 1).

Technical training

As shown in Chart 8.1 (see Appendix 1 Table A.1.8.2), almost 80% of the apprentices in the three groups said the equipment used for the technical training was either good or excellent. Thirty percent of all three groups found the overall quality of this training to be excellent.

The vast majority of the apprentices in three groups did not find the course and written material hard to understand or the instructor's delivery rushed. Overall, between 80% and 88% of the apprentices in the three groups did not find their technical training difficult (see Appendix 1 Table A.1.8.2).

Chart 8.1

Providing up-to-date equipment or technology for technical training by apprentice status, Canada, National Apprenticeship Survey, 2007
Conclusion

This report has summarized the key finding from the 2007 National Apprenticeship Survey. The data presented in this report has provided a profile of apprenticeship program completers, discontinuers and long-term continuers and has provided insight into differences in labour outcomes by apprentice status. It has also shed light on the reasons for interest in apprenticeship and obstacles to registration, on barriers to completion, adequacy of in-class and on-the-job training as well as mobility of apprentices during and after their programs. These results can be used by provincial and territorial apprenticeship authorities to assist policy and to evaluate their respective programs. In addition the results could be used to monitor factors affecting apprenticeship and to identify topics for future research.

Table A.1.2.2

Reasons influencing apprentice registration in their trade by apprentice status, Canada, National Apprenticeship Survey, 2007

| | Apprentice status in 2007 | | | | | |
| | Long-term continuers | | Completers | | Discontinuers | |
Reasons	percent	standard error	percent	standard error	percent	standard error
Interested in the trade or that line of work, like the work conditions	51.9	(0.6)	51.8	(0.3)	46.9	(0.7)
Expected good pay, better wages or a pay increase	20.8	(0.5)	24.4	(0.3)	21.3	(0.6)
Expected a steady job, more job availability and opportunities, high demand for the trade	15.6	(0.4)	17.2	(0.3)	15.5	(0.5)
Already had job, knowledge, experience or qualification in the trade	11.4	(0.4)	10.9	(0.2)	11.3	(0.5)
Suggestion from employer, co-worker, union, teacher or career counsellor	9.0	(0.3)	9.1	(0.2)	11.1	(0.4)
Needed a job or a trade, received a job offer	6.1	(0.3)	6.1	(0.2)	8.1	(0.4)
Required by the law, the employer, the union or the apprenticeship office	5.0	(0.2)	4.1	(0.1)	4.7	(0.3)
Union benefits	1.2	(0.1)	1.3	(0.1)	1.4	(0.2)
Hoped to own a business	2.1	(0.2)	2.1	(0.1)	2.0	(0.2)
Suggestion from family, relatives or friends in the trade or not, family business	4.3	(0.2)	3.4	(0.1)	3.7	(0.3)
Possibility of better job or career (advancement, challenge), gain greater knowledge, experience and certification (licence, ticket, Red Seal), work diversity	7.5	(0.3)	7.3	(0.2)	7.4	(0.4)
Other reasons	6.5	(0.3)	7.5	(0.2)	7.7	(0.4)
Total (apprentices) number	**28,242**	**(…)**	**59,302**	**(…)**	**17,514**	**(…)**

… not applicable

Term definitions

A

Ability
Expertise in performing successfully a task or set of tasks. This expertise may have been acquired with or without formal training or study and may be related to a specific trade, occupation, or profession. It may be measured using various instruments.

Academic Qualifications
Requirements for entry into a designated trade that involves a period of formal study in a recognized educational institution or equivalent. In most circumstances academic qualifications can be documented.

Accreditation
A process by which a government department, agency or association grants public recognition to training program that meets a predetermined set of standards.

Apprentice
A person who works in a trade, occupation or craft under an agreement or contract and is registered with the Apprenticeship Authority. The apprentice learns the knowledge, skills, tools and materials of the trade, occupation or craft through on-the-job training and technical instruction under the supervision of a certified journeyperson.

Apprentice On-the-Job Training Standards / Progress Record Book (Logbook)
A document issued to registered apprentices in which acquired skills, courses completed, and time worked at a trade or occupation are recorded.

Apprenticeship
A structured system of supervised training leading to certification in a designated trade, occupation or craft. It is systematic programs of on-the-job training supplemented by technical instruction in which an apprentice gains experiential learning and develop skills.

Apprenticeship Accreditation
A process by which an agency or association grants public recognition to a training establishment, program of study or service which meets pre-determined standards.

Apprenticeship Advisory Board – Provincial / Territorial
A provincial or territorial government appointed Board whose primary function is to advise the Minister responsible for labour market matters on issues related to training and certification of people in designated trades.

Apprenticeship Contract / Agreement
A document signed by the employer, sponsor, or joint apprenticeship training committee and apprentice, outlining the conditions and responsibilities of both parties to the terms of apprenticeship. The agreement may be co-signed by the government department or

agency that has responsibility for the *Apprenticeship Act* and regulations.

Apprenticeship Program Outline

A list of topics and performance objectives to be learned during each period of an apprenticeship program's technical training.

Apprenticeship Registration

A formal process requiring an individual to meet all the requirements for apprenticeship, including signing an apprenticeship contract, agreement or memorandum of understanding with an employer.

Apprenticeship Technical Training

A period of training/instruction provided to apprentices in a classroom setting away from the job site. The emphasis is on teaching the theory component of the trade or occupation, reinforced where appropriate, with shop/lab training. This training is intended to supplement the on-the-job training.

Apprenticeship Term

The normal length of time required for a person to attain journeyperson status from the time of registration as an apprentice and is usually a combination of both formal training and work experience. The length of time is generally expressed in years and hours per year or in hours.

Apprenticeship Training

Industry training that combines work-based training and experience with components of technical training leading to provincial/territorial and/or national industry training credentials (e.g. Red Seal) for trades-related occupations.

Assessment

The process of reviewing and evaluating competencies and qualifications for the purpose of determining whether or not a candidate has fulfilled the requirements to be eligible to practice an occupation. This process could include testing or examinations. The main purpose is to measure candidates against a pre-determined occupational or educational standard.

Assessment criteria

A standard of performance that a learner must reach in order to demonstrate the achievement of a specified element of learning.

B

Basic Skills

A minimum level of essential technical skills required to work in a trade to become an apprentice, and upon which proficiency in the trade is built.

Block Release Training

A method by which apprentices are released by their employers to attend technical training for a specified period (block) each year, usually five to eight weeks.

Bridging Program

A program of study, a course, or set of courses or activities designed specifically to provide practitioners from one jurisdiction with the skills and knowledge required for entry into a trade or profession in another jurisdiction. A bridging program is an example of an accommodation mechanism that complements the competencies or qualifications earned outside the jurisdiction.

C

Canadian Apprenticeship Forum (CAF)

The Canadian Apprenticeship Forum - Forum canadien sur l'apprentissage (CAF-FCA) is a diverse, not-for-profit organization that brings together the key participants who make up the Canadian

apprenticeship community. This dynamic partnership works within the Canadian labour market and strives to make a difference within that community.

Canadian Council of Directors of Apprentice- ship (CCDA)

A national body comprised of the provincial and territorial government officials responsible for managing and directing apprenticeship programs and two federal government representatives. The mission of the Council is to facilitate the mobility of the apprentices and journey-persons in Canada through the establishment of uniform standards in training and examinations as confirmed by a Red Seal endorsement.

Certificate of Apprenticeship

A document issued to a person who has successfully completed a formalized apprenticeship training program.

Certificate of Qualification

A certificate issued to a candidate who has successfully completed an apprenticeship program or has met all the requirements of a trade *and* has attained the prescribed pass mark on the certification examination to qualify as a journeyperson in that trade.

Certificate of Qualification Examination

Standardized provincial or territorial exam that is normally written upon completion of an Industry Training Program. The successful completion of this exam leads to the issuance of a provincial or territorial Certificate of Qualification.

Certification

The acquisition of a Certificate of Qualification.

Challenge Exam

A method of assessment to award credit for previously acquired learning. It measures learning through a variety of written and non-written evaluation methods, including examinations and demonstrations.

Challenge / Exemption

An authorization exempting someone from a normal requirement.

Common Core

The tasks in a National Occupational Analysis that have been identified by the industry as being performed by workers in at least 70 percent of the provinces and territories that have the trade or occupation designated for apprenticeship under the Interprovincial Standards Red Seal Program.

Common Sequencing

The arranging of learning materials in an order for delivery by a number.

Community College

A post-secondary educational institution offering programs related to liberal arts, technical and trades training (including pre-apprentice pre-employment and in-school technical training for apprentices).

Competency

A measurable level skill, and/or knowledge to perform occupation-specific tasks and duties.

Competency Assessment

Measurement of skills, knowledge, and behaviours obtained through formal or non-formal education, work experience, or other means, with the purpose of establishing individual's possession of requirements for a trade or profession. Competency assessments may be in the form of examinations or task-based performance testing.

Competency-Based Learning

Training aimed at acquiring discrete sets of associated task-based skills and knowledge that, in combination, make up the performance requirements of an occupation, profession, or trade.

Competency Profile
A curriculum component that graphically and logically delineates an occupation into a performance-based framework comprising major duties, tasks, and sub-tasks. Competency profiles are typically developed with input from practitioners who work in the occupation.

Completion of Apprenticeship
The fulfilment of training requirements, both technical and on-the-job, by registered apprentices. Graduates of an apprenticeship program applicable to the trade and the province and territory will be issued a Certificate of Apprenticeship. In most cases, they will also receive a Certificate of Qualification.

Compulsory Apprenticeship
A requirement in which people entering or working in a designated trade must possess a Certificate of Qualification or register as apprentices with the provincial or territorial authorities. Those working in the trade prior to the compulsory requirement may be exempted by provincial or territorial legislation.

Compulsory Certification
A requirement in which people entering or working in a designated trade must possess a Certificate of Qualification or be registered as apprentices in order to practice in the trade. See also *Voluntary Certification*.

Continuing Competence
The ability over time to integrate and apply the knowledge, skills, judgment, and personal attributes required to practice an occupation safely and ethically. Occupational bodies may require members to verify that they have met continuing competence standards.

Cooperative Education
A program for those enrolled in a school or community college who, through a cooperative arrangement between the training institution and employers, receives part of their instruction in the institution and part on-the-job through an employment agreement.

Core Curriculum
The portion of a curriculum developed to the occupational tasks common to a specific trade in the provinces and territories.

Correspondence Study
A systematic method of distance learning or training consisting of a series of sequentially organized lessons or assignments conducted and maintained through the postal service, electronic mail or a similar service.

Course
A single unit of study offered by educational institutions.

Course Outline
A brief description of the objectives, content and application of a specific program of study. It outlines the material to be learned in major, minor and unit groups in sufficient detail to ensure an understanding of the scope of the program. It may also include an evaluation profile.

Credentialing
Pertaining to the recognition of qualifications through the issuance of formal documentation.

Criterion
An objective and measurable indicator relating to skill level, knowledge, and/or competency.

Curriculum
A structured outline of learning organized into course(s) or work experiences that assist in the development of learners' knowledge and skills. It is a comprehensive term that includes such elements as task analyses, competency profiles/charts, course outlines, learning/teaching objectives and lesson plans.

Curriculum Resources	Resource materials developed to establish the standards for and facilitate the training of apprentices and journeypersons. Resource materials include, but are not limited to, skill profile charts, occupational analyses, apprenticeship program outlines, journeyperson upgrading and updating course outlines, trade/occupation manuals and modularized learning resource materials.

D

DACUM	An acronym for 'Developing a Curriculum', a model used in competency-based training for developing the learning activities that generate specific skills required by an occupation.
DACUM Chart	A listing of skills or competencies in a specific trade or occupation organized and presented in a chart format. The list is prepared using the DACUM (developing a curriculum) method for analyzing a trade or occupation. DACUM involves bringing together practitioners of a trade under the leadership of trained facilitator.
Day Release Training	Technical training for apprentices where employers release apprentices from work for one day to attend in-school training (usually one day a week).
Designated Apprenticeable Trade	A trade that has been formally recognized through provincial or territorial legislation for apprenticeship training and certification. The requirements for in-school and on-the-job training as well as level and certification examinations are outlined in the trade regulations.
Designated Red Seal Trade	A trade or occupation that has been designated by the Canadian Council of Directors of Apprenticeship (CCDA) for inclusion in the Interprovincial Standards "Red Seal" Program. The training and certification is based on a national occupational standard, and provinces and territories participating in the program for that trade or occupation are permitted to affix a Red Seal to the certificates of candidates who meet the standard. Refer also to the definition herein for Interprovincial (IP) Examination.
Discontinuer	An apprentice who terminates involvement in an apprenticeship training program prior to completion.

E

Education Level - Trade/Vocational	Trade/vocational training includes pre-employment or pre-apprenticeship and skill upgrading courses lasting three months or more, but does not include block release apprenticeship training, basic training for skill development, language training and job readiness training.
Education/Entrance Requirements	The level of formal education or other criteria such as an examination or assessment process that an individual must possess prior to becoming an apprentice or attending technical training. While these requirements may vary from trade to trade and province to province, Canadian Council of Directors of Apprenticeship (CCDA) advises that most employers require prospective apprentices to have a grade 12 education.
Employer	A person, corporation, partnership, unincorporated association, or a municipal, provincial or other public authority eligible to sign an Apprenticeship Agreement with an apprentice.

Entrance Requirements A set of criteria stipulating length, level, and scope of education, or other types of training, or experience, for eligibility to enter an academic institution, trade, or profession. May include stipulated minimal levels or achievement and/or minimal scores on examinations.

Equivalency In the context of industry training refers to the process of demonstrating that an individual has completed a requirement of an *Industry Training Program* outside of the traditional program. This may include demonstrating the equivalent of a specified number of work hours related to the program, or demonstrating the completion of technical training equivalent to a technical training component of an Industry Training Program.

Essential Skills Essential Skills are the "enabling skills" that help people perform the tasks required by their occupation and other activities of daily life. They provide people with a foundation to learn other skills, and enhance their ability to adapt to workplace change. Essential Skills include: reading text, document use, writing, numeracy, oral communication, thinking, working with others, computer use and continuous learning.

Examination Item Bank A collection or inventory of validated examination questions.

Examination Plan An outline of specifications or proposed content of an examination. The plan is based on a National Occupational Analysis and will reflect the importance, frequency and complexity of tasks performed in a trade or occupation.

Examination Standards A set of established standards for a trade and that meet provin-cial or interprovincial criteria. They include:

a) occupational standards;

b) acceptable development criteria and administrative procedures; and,

c) other factors that contribute to quality examinations.

F

Fixed Entry/Open Exit Training A system of training based on specific performance criteria where progress in learning is measured in terms of demonstrated skills and knowledge and where an apprentice or other learner is allowed to progress through and exit a course of instruction at a rate determined by his or her own capabilities. This training system is also referred to as the Modified Block Release training system. Learning is usually supported by the use of modularized learning resource materials and the services of a facilitator/instructor.

Flexible/Distance Education Formal training delivery methods that enable registered apprentices and other learners to complete a course of study utilizing current communications technologies and may include some traditional classroom-based instruction. Some examples of current communication technologies being utilized to reduce the periods of formal classroom instruction include the Internet, interactive computer-based training and video teleconferencing.

Forum of Labour Market Ministers (FLMM)	A forum comprised of the provincial/territorial, ministers and the federal minister with responsibility for reviewing work and setting priorities for federal-provincial/territorial and interprovincial cooperation on labour market issues. The forum is supported through a set of committees at various levels, including: ministers, deputy ministers, senior officials and working groups.
Funding for Apprenticeship Training	The costs associated with the training of an apprentice. Wages are paid during the on-the-job period by the employer. The cost of the technical portion of training is, in most cases, shared between the provincial or territorial government and the federal government, while in others they are paid in total by one party. Employers and apprentices contribute to the cost of institutional training.

G

Grandparenting (Acquired Rights)	The recognition of a person's work experience in a trade prior to the trade being designated for training and certification or a designated trade being declared for compulsory certification. The recognition may be in the form of granting the Certificate of Qualification without examination, a permit to work at a trade for a specified or indefinite period or other forms that permit the person to continue working in the trade in the same capacity as before its designation or certification.

H

Hour Release Training	Technical training for apprentices whereby they are released from work by their employers to attend technical training for a number of hours per day, usually one day a week.
Human Resources and Social Development Canada (HRSDC)	This is the Federal Department that has responsibility for providing the secretariat services for the Interprovincial Standards (Red Seal) Program including the translation, printing and distribution of interprovincial examinations. The department is also responsible for the development and distribution of National Occupational Analyses.

I

Individualized Instruction	Instruction focused on a single learner (as opposed to a group of learners) and considerers the learner's existing skills, abilities, needs, learning preferences and rate of learning. Individualized instruction is usually accomplished through modular delivery of training.
Industry Trade Advisory Committee	Committee appointed to represent the interests of an equal number of employers and labour, on a committee off designated by a provincial or territorial agency, to offer advice and make recommendations regarding apprenticeship and journeyperson training and certification standards. Representatives are knowledgeable in the trade or occupation and are seen as the primary vehicle for ensuring industry has a voice in the development and delivery of apprenticeship training.
Industry Training	A broad strategy used to provide individuals with the competencies and attendant credentials required to work in industry. The defining features of industry training, within the context of the Industry Training Authority's (ITA) mandate, are: 1.Occupational

competencies and standards for each occupation are **defined by industry** and approved (recognized and/or accredited) by the Industry Training Authority under the provisions of the Industry Training Authority Act; 2. Demonstration of defined competencies and standards by individuals results in the awarding of a **credential** by ITA and/or its designates; 3. The training methodologies, while varied and flexible, normally comprise a component of **work-based learning and/or experience** that enables individuals to practically acquire and/or apply skills and knowledge.

In-School Training

A period of training/instruction usually provided to apprentices in a classroom setting. The emphasis is on teaching the theory component of the trade, and is intended to supplement on-the-job training.

Internship

A period of practical, supervised, on-the-job training designated to give the learner the required skills and knowledge for entry into a trade or profession, supplementing a period of formal study. An intern is an advanced student or recent graduate in a professional field who is getting practical experience under the supervision of an experienced worker.

Interprovincial Common Core Curriculum Standard (ICCCS)

The identification of standards within the technical training component of an apprenticeship program commonly accepted across jurisdictions.

Interprovincial Computerized Examination Management System (ICEMS)

A system intended to manage the inter-provincial standards Red Seal examination development process, Computer technology is used to store and selectively retrieve examination items from a bank, automate the process of examinations and track examination candidates.

Interprovincial Red Seal Examination

A standardized interprovincial examination available in a Red Seal trades. The successful completion of an Interprovincial Red Seal Examination leads to a Red Seal endorsement which is affixed to the provincial Certificate of Qualification.

ICEMS Steering Committee

A committee comprised of representatives with involvement in the In-terprovincial Standards Red Seal Program whose mandate is to oversee the development and implementation of the ICEMS initiative.

Interprovincial Standards Examination Committee (ISEC)

A working group of the Canadian Council of Directors of Apprenticeship (CCDA) comprised of staff responsible for the development of certification examinations within the provinces and territories. It includes two representatives from the federal department of Human Resources and Social Development. ISEC oversees the development and administration of interprovincial examinations.

Interprovincial Standards Red Seal Program

A program designated to bring together provincial, territorial and federal governments to achieve increased workforce mobility by establishing common standards for certification in individual trades and occupations. Elements of the program are the National Occupational Analyses and the interprovincial examinations. The program is complementary to provincial and territorial certification programs and administered by the Canadian Council of Directors of Apprenticeship (CCDA). It is also referred to as the Red Seal Program.

J

Journeyperson

A formally certified, fully skilled worker whose combined work experience and training satisfy all the requirements demanded of those who practice in a designated trade.

Journeyperson Certification Only

A provision of prevailing provincial/territorial legislation that provides for the certification of persons at the journeyperson level only but makes no provision for the registration and training of persons as apprentices. This provision is often incorporated to reduce barriers to the mobility of qualified workers.

Journeyperson Certification – Compulsory

A prevailing provincial/territorial legislation requirement in which persons entering or working in a designated trade or occupation must possess a Certificate of Qualification or be registered as apprentices, in order to work or practice in that trade or occupation. Those working in the trade or occupation prior to the compulsory requirement may be eligible for exemption from this requirement by the provincial/territorial authorities. In some jurisdictions, the Certification Program is referred to as the Trades Qualification (TQ) Program.

Journeyperson Certification – Voluntary

A provision of prevailing provincial/territorial legislation that provides a voluntary opportunity for eligible journeypersons working in a specific designated trade or occupation to become certified. In some jurisdictions, the certification program is referred to as the Trades Qualification (TQ) Program.

L

Labour Market

An expression of the interaction that occurs between the supply of labour by the potential workers and the demand for workers by employers.

Legislation – Apprenticeship

The provincial and territorial Acts and Regulations governing the administration of apprenticeship and related programs, including the training and certification of apprentices and tradespersons.

Licence

Document entitling its holder to have the exclusive right to practice a trade or profession, and signifying that the licence-holder meets competency and other requirements for practice.

Licensing

Some "licensed" professions may only be practiced by holders of a licence in the specific field of practice. A licence is required to perform procedures reserved for members of the licensing body. A licence signifies that the regulatory body has examined the holder's credentials and that the holder meets the standards established by it and has undertaken to comply with and apply the standards in force in the profession, occupation, or trade. A licence also entitles the holder to use a reserved title.

Licensing, Certification or Registration

A formal recognition that a person has attained a standard of proficiency in a set of knowledge, skills and abilities required to practice a trade or occupation.

Licensure

Procedures for determining eligibility, granting licences, and protecting the public with respect to the practice of the trade or profession requiring a licence. Licensure denotes to the public that

the person who has been granted the licence has the competence needed to provide for the public's protection.

Linkages / Credit   The relationship between training courses and programs in high schools, community colleges and technical institutions and the apprenticeship program. The programs are linked to permit the granting of apprenticeship credits for skills and knowledge acquired prior to enrolling in apprenticeship. See also **Prior Learning Assessment and Recognition (PLAR)** and **Accreditation.**

Logbook   A booklet issued to registered apprentices in which acquired skills, knowledge and time worked at a trade are recorded. The name given to the book may differ between provinces and territories.

M

Maintenance   The process of renewing standards, updating curricula and upgrading professional/occupational training of certificate and licence holders for the purposes of keeping their professional and occupational practice and standards current.

Mentorship   A service associated with educational programs and licensing/registration processes, through which individuals obtain ongoing advice and assistance from persons experienced in their field of study or occupation.

Modular Training   A training program organized and delivered in distinct units or clusters of related materials. The modular training concept allows for individualized instruction and learning, and flexible completion times for apprentices. Competency or performance-based training programs use the modular concept in the organization of units of instruction.

Modularized Learning Resource Materials   Educational packages which include learning objectives, learning activities and self-assessment procedures designed to guide the learning of apprentices and journeypersons for a specific unit of training. Packages may be developed for use in individualized and/or instructor/facilitator driven settings and for apprentice training and/or journeyperson upgrading/updating.

Module   A self-contained unit of instruction that focuses on a single competency to be learned. Modules are normally used in self-paced instructional programs.

Mutual Recognition   Acceptance by appropriate authorities in two jurisdictions that the qualifications of their workers in a given occupation conform to one another's occupational standard without requiring the worker to undergo any additional assessment or training.

N

National Occupational Analysis (NOA)   A document that details tasks and sub-tasks performed by workers in a trade or occupation. The National Occupational Analyses for Red Seal trades are developed by industry practitioners, under the guidance of the federal government and with the assistance of the provinces and territories. The National Occupational Analysis is used as the base document to develop an interprovincial Red Seal examination. The CCDA recognizes the occupational analysis as the national standard for the occupation.

National Occupational Classification (NOC)	A document that classifies all occupations in Canada. This system of coding is the basis for the organization of occupations in Job Futures.
National Standards	A set of standards that are established for Canada through a system of national occupational analyses developed by the industry in association with the provincial, territorial and federal governments. They permit standardization of training and certification programs, and the mobility of tradespersons.

O

Occupation	A set of skills that, with some variation, are similar in their main tasks or duties or in the type of work performed. The skills that comprise an occupation are considered together for the purposes of classification or setting of standards. The definition of an occupation may differ between provinces and territories in Canada or between countries.
Occupational Mobility	When, for whatever reason, an individual moves from one job to another without experiencing an extended period of unemployment.
Occupational Qualifications	Occupational qualifications mean the knowledge, skills, abilities and experience of an individual.
Occupational Requirement	Occupational requirement means a condition other than an occupational standard, imposed by a recognized body for the practice of an occupation.
Occupational Standard	Occupational standard means the skills, knowledge and abilities required for an occupation as established by a recognized body and against which the qualifications of an individual in that occupation are assessed.
On-the-Job Training	The component or portion of an apprenticeship training program where apprentices spend time working on the job site learning the skills of the trade under the supervision of a journeyperson.

P

Performance-Based Training	See *Competency-Based Learning* Performance criterion
Period of Articling / Internship	A period of practical, supervised, on-the-job training designed to supplement a period of formal study and give the practitioner the required skills and knowledge for entry into a trade or profession.
Portfolio	A formally presented document that describes learning achieved from prior experience, articulates learning objectives toward the specific course requirements of an educational institution or professional association or the requirements of an employer, and shows validation or proof through third-party documentation.
Practical Training	The part of apprenticeship training in which an apprentice works on a job site learning the skills of a designated trade under the supervision of a certified journeyperson.

Practical Training Record Book	A component of the Apprentice Portfolio used to record tasks, sub-tasks and practical skill development verified by a certified journeyperson, or designated trainer, and reviewed by the Apprenticeship Training Coordinator.
Pre-Apprenticeship Training	A program mainly of technical and general education, including a portion of trade practice, offered in high schools, vocational schools, community colleges and technical institutes and linked to an apprenticeship program through the credit system.
Pre-Employment Training	Courses providing intensive instruction for entrance into employment in a specific occupation. Depending on the jurisdiction, these courses may not necessarily be linked to apprenticeship training. In some jurisdictions, however, this term refers to all training leading to employment, including pre-apprenticeship training courses.
Pre-Employment Training – Compulsory	A compulsory pre-employment training course that must be completed prior to participating in an apprenticeship program for a specific designated trade or occupation.
Pre-Employment Training – Voluntary	A pre-employment training course that can be taken on a voluntary basis and is not a prerequisite to entering into an apprenticeship program in a specific designated trade or occupation.
Prerequisite	A level of competence or education required by a person for entrance to an apprenticeship program and to succeed in the subsequent levels of the program.
Prior Learning Assessment and Recognition (PLAR)	A process under which recognition is extended towards completion of an apprenticeship for skills, knowledge or competencies that have been acquired experientially through work experience, previous education and training or self studies. The prior learning should articulate with the formal technical training or on-the-job training requirements for the trade or occupation in which the apprenticeship is to be served.
Professional Development	Studies completed by individuals to enhance knowledge and skills in their fields of practice.
Program Development Officer	A person in a jurisdiction who is respon-sible for developing and evaluating occupational training and certification programs, including interprovincial and other examination. In some jurisdictions, these people are called Curriculum and Examination Development Officers.
Program Standards	Expectations of performance and achievement for certification in a particular trade. These standards include pass marks, quality assurance, program progression criteria and certification criteria.
Provincial Trade	The mandate of the Provincial-Territorial Advisory Committee is to
Advisory Committee (PTAC)	advise and make recommendations to the Council on matters related to voluntary standardization and to promote cooperation and communication between the provinces, the territories and the Council (Standards Council of Canada — SCC).

Q

Qualification Possession of set(s) of skills and knowledge for entry into an occupation or an educational institution, or for practice of a profession or occupation.

R

Ratio The number of apprentices a journeyperson is permitted to supervise. The procedure for establishing ratios may vary between jurisdictions, for example, the ratio may be set by regulation under the *Apprenticeship Act*, by the Apprenticeship Board or by individual trade advisory committees or boards. Ratios will vary from trade to trade and, in the absence of an established ratio, a ratio of one apprentice to one journeyperson is used.

Ratio – Journey-person/ Apprentice The number of qualified/certified journeypersons that an employer must employ in a designated trade or occupation in order to be eligible to register an apprentice as determined by prevailing provincial/territorial legislation, regulation, policy directive or bylaw issued by the responsible authority or agency. Ratio may be fixed for all employers or variable and can be adjusted by the responsible authority when taking into account an employer's ability to train. Generally, in the absence of an established ratio, a ratio of one apprentice to one journeyperson is used.

Recognized Training Programs Programs that have been approved pursuant to a bylaw by the Industry Training Authority Board of Directors and lead to a Certificate of Qualification.

Red Seal A nationally registered trademark symbol adopted for the Interprovincial Standards Program to signify interprovincial qualification of tradespersons at the journeyperson level. It is affixed to the provincial and territorial Certificates of Apprenticeship and Qualifications of those apprentices and tradespersons who have met the national standard in a Red Seal trade. The Red Seal is a passport that allows the holder to work anywhere in Canada without having to write further examinations.

Red Seal Designated Trade A trade that has been designated by the Canadian Council of Directors of Apprenticeship (CCDA) for inclusion in the Interprovincial Standards Program. The training and certification are based on a national occupational standard, and provinces and territories are permitted to affix a Red Seal to the certificates of candidates who meet the standard.

Registered Apprentice A trainee who has met all the requirements for entrance into an apprenticeship program and who has signed an apprenticeship contract or agreement with an employer, sponsor or joint apprenticeship training committee. The term registered is now regularly being substituted for indentured.

Regulations The formal rules by which the principles outlined in provincial and territorial Acts governing apprenticeship training are to be carried out. Each designated trade may have a set of regulations covering all aspects of training and certification.

Retraining   The training for the acquisition of new knowledge and skills related to a trade other than for which a person was originally trained.

S

Scope of a Trade   The range or extent of skills required or tasks performed in a particular trade or occupation.

Sector Council   An organization that represents an industrial sector in terms of occupations, productivity, and viability of the industry.

Self-Paced Learning   The acquiring of knowledge and skills at a pace suitable to the individual learner.

Sequencing of Curriculum   The arranging of learning materials in a logical order for training activity.

Skill   The ability to perform tasks with a specific degree of proficiency.

Skill Level   A designation used to classify occupations in the National Occupational Classification by the level of training, education or experience required to perform an occupation.

Skill Profile Chart   A comprehensive portrayal of the major trade areas and associated tasks for a trade or occupation which an individual must successfully perform to meet job requirements. The profile may be presented in a graphical format e.g., DACUM chart or a narrative format.

Skill Type   A designation used to classify occupations in the National Occupational Classification by the industry or sector in which the majority of the occupations fall.

Skill Updating   The training required to bring a person's skill or set of skills up to date with new methods, technology and procedures required in the trade or occupation in which the person is currently employed or certified.

Specialization   A situation in which a person's training or work in a trade is concentrated or focused on a segment of the trade.

Sponsor   A person or body registered with the Industry Training Authority willing and able to ensure the trainee receives training and related practical experience in the tasks, activities and functions that are carried out in that occupation, and undertakes to attest that the trainee has met the established standards for the Industry Training Program.

Standard   A written description of characteristics which are deemed to be required by users of the standard. A standard serves as a benchmark or point of comparison and it allows the determination of the variability and quality of a product, process or service.

Standard Setting   The process of identifying the pertinent tasks, knowledge, and/or skills within an occupation, profession, trade, sub-specialty, etc., and establishing uniform achievement levels in the performance of those tasks.

Sub-Task   The smallest unit of the Occupational Analysis into which it is practical to divide any work activity. The complete set of sub-tasks and supporting knowledge and abilities describes a "Task".

Supporting Knowledge and Abilities The element of skill and knowledge that an individual must acquire to adequately perform the task.

T

Task A work activity that is distinct, observable, performed within a limited period of time, and which leads to a product, service or decision.

Task Analysis A systematic process of identifying and listing job tasks and analyzing the behaviour required to carry out a task with a view to identifying areas of difficulty and the appropriate training techniques and instructions necessary for successful learning.

Technical Training The part of an apprenticeship training program that is delivered in-school, and includes theoretical aspects of the trade designed to supplement the skills acquired during on-the-job training. It makes up approximately 15 percent of the total apprenticeship training program.

Trade An occupation for which a provincial or territorial apprenticeship program is available. Trade skills can best be learned through an apprenticeship.

Trade Advisory Board / Committee A provincial or territorial group appointed to advise and make recommendations regarding apprenticeship training and certification in a designated trade. It is comprised of persons knowledgeable about the trade. Normally, an equal number of employee and employer representatives are appointed to a committee. Some jurisdictions have a single provincial or territorial for each trade, others have local or regional trade advisory committees in addition to the provincial committee. These committees are the primary vehicles for ensuring that the industry has a voice in the development and delivery of apprenticeship programs.

Trade Vocational Higher level of education that may or may not require the completion of high school and may involve on-the-job training as part of the course requirements.

Trades Qualification A process of Certification which recognizes workers with a minimum number of years and hours of documented experience in a trade. Workers can apply for certification and write a certification exam for trades qualification.

Trade Qualifier A Trade Qualifier is an individual who has amassed sufficient practical work experience to meet the established criteria to attempt the certification journey level (provincial or interprovincial) examination. The criteria require relevant on-the-job experience of at least one year in excess of the apprenticeship term.

Train-the-Trainer Program A program designed to provide training and coaching skills to journeypersons responsible for the workplace training and supervision of apprentices.

Training The acquisition of knowledge or skills by the performance of tasks under the direct supervision of a person who has already acquired the knowledge or skill. Training can occur on the job or in a formal setting.

Training Course

A period of on-the-job practical training, usually supervised, within a compulsory program of technical or vocational training. May be required in addition to general qualifications for access to a trade, occupation, or profession. May constitute additional training or retraining.

Training Delivery Method – Block Release

Refers to a training delivery method by which apprentices are released from work by their employers to attend prescribed full time in-school technical training for a specified period (usually three to ten weeks, once each year).

Training Delivery Method – Individualized

A single learner focused (as opposed to a group of learners) method of providing apprenticeship technical training instruction utilizing current communications technologies and/or a facilitator/instructor in a classroom, shop or lab. Jurisdictions that are moving to an individualized course method of instruction will show only the total hours of training as opposed to a number of periods and total weeks of instruction. Modularized learning resource materials are often used to support this type of training delivery.

Training Institution

A public or private college or post-secondary institute that provides training services.

Training Manual

A guide for the use of training staff, showing in detail the subject areas and behavioural objectives to be achieved, methods of instruction, equipment and materials to be used, the form of records to be kept and the tests to be administered.

Training Standards

A set of standards set within a trade or occupation to ensure apprentices receive training that will lead to certification at the journeyperson level. They include:

a)   standards of in-school instruction

   i)   qualifications of instructors;

   ii)   program development;

   iii)   training aids, models and equipment;

   iv)   facilities;

   v)   ratio of apprentices to in-structors; and,

   vi)   other factors that contribute to quality training.

b)   standards of on-the-job training

   i)   qualifications of trainer;

   ii)   variety and level of work available to the apprentice;

   iii)   facilities and equipment;

   iv)   monitoring of training by apprenticeship field staff;

   v)   ratio of apprentices to journeypersons; and,

   vi)   other factors that contribute to quality training.

Transferable skill

Skills acquired through various employment, volunteer and academic experiences that can be applied from one position to another.

U

Unit
The basic component of technical training in a given trade. It may provide specific technical or complementary content that is delivered and completed in its entirety within one level of training.

Unit Outline
A document that lists unit learning objectives, detailed content and exam plans.

V

Validation
A process whereby industry, under the guidance of Program Development Officers and through provincial and territorial trade advisory boards/committees, reviews and confirms relevant program material (e.g., occupational analyses and examinations) for validity, content and accuracy.

Vocational Counselling
Engaging in career planning with individuals through a process of informing them about various opportunities for education, training and work.

Voluntary Certification
A situation in which certification is available in a designated trade, but there is no legislated requirement that apprentices in a trade should be registered, or that workers engaged in the trade should be certified journeypersons.

Appendix 3:   Survey methodology

The National Apprenticeship Survey (NAS) of 2007 is a cross-sectional survey designed to collect data directly from Canadian apprentices. These apprentices were contacted by Statistics Canada between January and May 2007 and responded to a telephone survey conducted on a voluntary basis. It should be noted that the sample represents three specific types of apprentices and not the entire apprentice population and the survey results provides a cross section—a snapshot of all the groups at one point in time.

Target population

For the NAS, a selected person was considered in scope for the survey if he or she had engaged in some apprentice activities between 2000 and 2004. The NAS targeted registered apprentices in the ten provinces and the three territories based on their apprenticeship status and thus are not representative of all apprentices. The three groups of apprentices targeted were:

> **Completers:** were identified as such by the 12 jurisdictions[1] and refers to those who had completed their apprenticeship program in either one of the reference years 2002, 2003 and 2004 and were not registered in any apprenticeship training as of December 31st 2004.

> **Discontinuers:** were identified as such by the 12 jurisdictions[2] and refers to those who had stopped their apprenticeship program in either one of the reference years 2002, 2003 and 2004 and were not registered in any apprenticeship training as of December 31st 2004.

> **Long-term continuers:** were defined as active apprentices as of December 31st 2004 who registered as apprentices before the year 2000 and who had been registered for more than one and a half the prescribed duration time required to complete their apprenticeship programs in the same trade as 2004. Approximately 19% of the 2004 continuers were long-term continuers

Excluded from the target population are apprentices who were registered in any apprenticeship training as of December 31st 2004 and who had within the normal bounds of the prescribed duration for their training. This group represents 81% of all continuers as of 2004.

_____

1.   Nunavut data was unavailable for the survey.

2.   Nunavut data was unavailable for the survey.

The target population was first determined at the stage of frame creation using the definitions above. During data collection, individuals were asked to confirm their apprentice activities as of 2000 and 2004. If their confirmed apprenticeship status did not fall within one of the three target population groups they were considered out-of-scope for the survey.

Sample frame

The survey sampling frame was based on lists of registered apprentices provided by the provincial and territorial jurisdictions for the targeted reference years (2002, 2003 and 2004). These lists contain all necessary information needed for the stratification and selection of the sample such as the status of the apprentice, registration year, trade or training program, apprentice's age and gender. As well, contact information was provided such as the apprentice's address and phone number. A second source of contact information was also provided for some jurisdictions.

An assessment of the sampling frame was conducted to evaluate its coverage and the quality and uniformity of the information for the 12 jurisdictions that provided data. Linking of the apprentices from the three reference years was necessary in order to classify each apprentice in the right status group (long-term continuers, completers or discontinuers) and also to eliminate duplicates within and across jurisdictions.

Table A.3.1

Number of apprentices on frame by jurisdiction and frame status

Reporting jurisdictions	Frame status			
	Long-term continuers	Completers	Discontinuers	Total
	number	number	number	number
Newfoundland	2,430	545	2,255	5,230
Prince Edward Island	5	315	45	370
Nova Scotia	730	1,245	1,110	3,085
New Brunswick	365	1,300	1,295	2,960
Quebec	12,030	7,740	12,085	31,850
Ontario	19,650	14,410	13,740	47,795
Manitoba	530	2,160	1,635	4,325
Saskatchewan	510	2,390	2,005	4,905
Alberta	1,800	14,240	13,005	29,045
British Columbia	310	6,815	8,190	15,315
Yukon	35	65	85	190
North West Territories	20	110	180	310
Canada	**38,405**	**51,340**	**55,630**	**145,375**

Note: Numbers have been rounded to the nearest five.

Sample design

Three variables were used for the stratification of the survey sample: jurisdiction, apprentice status and main trade groups. There were 12 jurisdictions, three apprentice statuses, and 7 main trade groups. These variables produced a total of 231 strata.

A national sample size of at least 30,000 respondents was necessary to provide reliable estimates for each stratum. A minimum sample was allocated to each stratum and the remaining sample was allocated proportionally to the number of apprentices in each stratum. In several strata, a census of apprentices was selected. Moreover, in small provinces and territories, it resulted in selecting a census of apprentices for this jurisdiction.

Within each stratum, a random sample of apprentices was selected. The sample was allocated in seven steps. First, the sample was allocated by final status (expected status at time of collection), then by frame status. Third, allocation of a minimum number of cases by stratum took place followed by determining take-all strata. Fifth, proportional allocation of the remaining cases was applied. Adjustments for tracing and response rates and augmentation for cases with no useful contact information were the two last steps done when allocating the sample.

Shown in the table below is the total number of cases allocated by jurisdictions and frame status, sent to the different regional offices of Statistics Canada to do the survey. It is from this collection sample that the targeted sample of 30,000 respondents is collected in order to reach a minimum precision for all domains of interest (aim of a CV of 33.3% for an estimated proportion of 10% in as many strata as possible and approximately to a CV of 16.6% for an estimated proportion of 25%).

Table A.3.2

Collection sample size by jurisdiction and frame status

Jurisdictions	Long-term continuers number	Completers number	Discontinuers number	Total number
Newfoundland and Labrador	1,435	**545**	1,965	3,945
Prince Edward Island	**5**	**315**	**45**	370
Nova Scotia	**730**	**1,245**	**1,110**	3,085
New Brunswick	**365**	**1,300**	**1,295**	2,960
Quebec	2,855	3,180	4,820	10,850
Ontario	4,510	5,635	5620	15,760
Manitoba	**530**	1,335	**1,635**	3,500
Saskatchewan	**510**	1,410	**2,005**	3,925
Alberta	1,080	5,515	5,305	11,900
British Columbia	**310**	3,035	3,770	7,110
Yukon	**35**	65	**85**	190
North West Territories	**20**	110	**180**	310
Canada	**12,375**	**23,700**	**27,830**	**63,905**

Notes: The bolded print figures represent a take-all cell.
Numbers have been rounded to the nearest five.

A much higher than expected out of scope rate was observed in some strata during the first half of collection, consequently, it was decided to add sample to make up for the expected loss of respondents compared to the number expected before collection.

Table A.3.3

Allocation of the raw sample by jurisdiction after additional sample (based on the frame status)

Jurisdictions	Long-term continuers number	Completers number	Discontinuers number	Total number
Newfoundland	1,825	**545**	**2,250**	4,620
Prince Edward Island	**0**	**315**	**45**	365
Nova Scotia	**730**	**1,245**	**1,110**	3,085
New Brunswick	**365**	**1,300**	**1,295**	2,960
Quebec	3,615	3,180	4,820	11,610
Ontario	7,010	5,635	5,620	18,260
Manitoba	**530**	1,335	**1,635**	3,500
Saskatchewan	**510**	1,410	**2,005**	3,925
Alberta	1,080	5,515	5,305	11,900
British Columbia	**310**	3,035	3,770	7,110
Yukon	**35**	**65**	**85**	190
North West Territories	**20**	**110**	**180**	310
Total	**16,020**	**23,700**	**28,115**	**67,835**

Note: The bolded print figures represent a take-all cell.
The final number of cases sent to collection is 67,070.

Response rates

Survey response rates help to measure the effectiveness of the population being sampled and the collection process as well as being good indicators of the quality of the estimates produced. The table below shows the response rate at collection of NAS, at the national level as well as at the jurisdictional level.

Table A.3.4

Response rates by province and territory and frame status for National Apprenticeship Survey, 2007

Jurisdictions by frame status	Total sample size number	Responding apprentices number	Response rate at collection percent
Newfoundland and Labrador	**4,624**	**1,531**	**42.7**
Long-term continuers	1,826	652	46.3
Completers	544	365	71.0
Discontinuers	2,254	514	30.9
Prince Edward Island	**364**	**201**	**68.6**
Long-term continuers	2	1	100.0
Completers	317	178	69.8
Discontinuers	45	22	59.5
Nova Scotia	**3,084**	**1,818**	**73.1**
Long-term continuers	729	467	77.6
Completers	1,247	912	79.1
Discontinuers	1,108	439	60.0
New Brunswick	**2,960**	**1,696**	**66.2**
Long-term continuers	364	228	66.1
Completers	1,302	985	78.9
Discontinuers	1,294	483	49.9
Quebec	**11,612**	**5,815**	**63.2**
Long-term continuers	3,614	1,934	69.9
Completers	3,179	2,088	72.5
Discontinuers	4,819	1,793	50.4
Ontario	**18,261**	**7,237**	**49.2**
Long-term continuers	7,010	1,804	36.4
Completers	5,633	3,647	68.8
Discontinuers	5,618	1,786	40.2
Manitoba	**3,500**	**1,758**	**58.3**
Long-term continuers	528	279	62.3
Completers	1,336	922	71.8
Discontinuers	1,636	557	43.4
Saskatchewan	**3,925**	**1,918**	**55.1**
Long-term Continuers	509	284	61.6
Completers	1,412	916	67.5
Discontinuers	2,004	718	43.3
Alberta	**11,900**	**5,534**	**50.8**
Long-term continuers	1,079	700	67.0
Completers	5,517	3,333	62.5
Discontinuers	5,304	1,501	33.2
British Columbia	**7,112**	**2,860**	**45.8**
Long-term continuers	309	149	51.2
Completers	3,033	1,708	59.6
Discontinuers	3,770	1,003	32.5
Yukon	**189**	**78**	**44.1**
Long-term continuers	35	13	39.4
Completers	67	40	60.6
Discontinuers	87	25	32.1
Northwest Territories	**310**	**126**	**42.7**
Long-term continuers	19	4	22.2
Completers	112	63	57.3
Discontinuers	179	59	35.3
Canada	**67,841**	**30,572**	**53.7**
Long-term continuers	**16,024**	**6,515**	**52.6**
Completers	**23,699**	**15,157**	**67.7**
Discontinuers	**28,118**	**8,900**	**40.1**

Estimation and weighting

The principle behind estimation in a probability sample such as the NAS is that each person in the sample "represents", besides himself or herself, several other persons not in the sample. In order to have estimates produced from survey data being representative of the target population, a weight is given to each person who responded to the survey questions. This weight corresponds to the number of persons represented by the respondent for the target population. The weighting phase is a step which calculates, for each record, what this number is. This weight appears on the micro data file, and **must** be used to derive meaningful estimates from the survey.

For weighting purpose, this survey can be seen as a two-phase survey. The first phase corresponds to the selection of the sample and the responding units correspond to the second phase sample. The first phase weight is the inverse of the probability of selection of the apprentice. This first phase weight is then multiplied by a second phase adjustment factor. For the purpose of the second phase adjustment, response homogeneous groups (RHG) are created based on the characteristics of the respondents and the non-respondents. The adjustment factor is simply the inverse of the observed weighted response rate in each RHG.

For variance estimation, the two-phase approach of the Generalized Estimation System (GES) was used.

Data accuracy

While considerable effort is made to ensure high standards throughout the collection and processing of date, the resulting estimates are inevitably subject to a certain degree of error. There are two major types of error: non-sampling and sampling.

Non-sampling errors may result from frame imperfections and non-responses. A large proportion of apprentices (25.9%) in the sample were found to be out-of-scope (no apprentice activities during the target reference period) due to the frame imperfection. They were out-of-scope because they said they never been an apprentice or they had been an apprentice but not within the targeted reference years. Provincial/territorial out-of-scope rates ranged from 10% to 40%. The out-of-scope rate was 7.8% for completers, 35% for long-term continuers and 39.3% for discontinuers.

Table A.3.5

Out-of-scope rates by jurisdiction and frame status (calculated from resolved units only)

Frame jurisdiction	Long-term continuers percent	Completers percent	Discontinuers percent	Total percent
Newfoundland and Labrador	38.5	7.5	52.8	39.9
Prince Edward Island	...	25.8	26.7	26.1
Nova Scotia	21.3	9.3	45.9	24.6
New Brunswick	7.6	5.0	40.0	18.8
Quebec	30.1	12.4	40.2	28.7

… not applicable

There is an important coverage difference for Quebec in comparison to other provinces. In Quebec, almost only the construction trades are represented on the NAS frame. The list of apprentices for the construction trades was provided by "La Commission de la construction du Québec" (CCQ). Emploi-Québec (EQ) provided a list for 4 non-construction trades but this list was incomplete (no completers for 3 of the 4 trades). Therefore, only one trade (industrial electrician) was kept on the NAS frame from the EQ list of apprentices. Therefore, comparisons of estimates between the province of Quebec and other provinces should be avoided unless the comparison is made with similar trades.

A major source of non-sampling errors in surveys is the effect of **non-response** on the survey results. The extent of non-response varies from partial non-response (failure to answer just one or some questions) to total non-response. Total non-response occurred because the interviewer was either unable to contact the respondent, no member of the household was able to provide the information, or the respondent refused to participate in the survey. Total non-response was handled by adjusting the weight of individuals who responded to the survey to compensate for those who did not respond.

In most cases, partial non-response to the survey occurred when the respondent did not understand or misinterpreted a question, refused to answer a question, or could not recall the requested information. In partial and item non-response cases, donor imputation was performed for certain variables. The variables imputed were the wages and salaries related variables of the Labour Force (LF) and Most Recent Job (MR) modules.

The basis for measuring the potential size of sampling errors is the standard error of the estimates derived from survey results. Because of the large variety of estimates that can be produced from a survey, the standard error of an estimate is usually expressed relative to the estimate to which it pertains. This resulting measure, known as the coefficient of variation (CV) of an estimate, is obtained by dividing the standard error of the estimate by the estimate itself and is expressed as a percentage of the estimate.
