How to obtain more information

For information about this product or the wide range of services and data available from Statistics Canada, visit our website at www.statcan.ca, e-mail us at infostats@statcan.ca, or telephone us, Monday to Friday from 8:30 a.m. to 4:30 p.m., at the following numbers:

Statistics Canada's National Contact Centre

Toll-free telephone (Canada and United States):

Inquiries line	1-800-263-1136
National telecommunications device for the hearing impaired	1-800-363-7629
Fax line	1-877-287-4369

Local or international calls:

Inquiries line	1-613-951-8116
Fax line	1-613-951-0581

Depository Services Program

Inquiries line	1-800-635-7943
Fax line	1-800-565-7757

To access this product

This product, Catalogue no. 92-162-G, is available free in electronic format. To obtain a single issue, visit our website at www.statcan.ca and select "Publications" > "Free Internet publications".

Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner. To this end, Statistics Canada has developed standards of service that its employees observe. To obtain a copy of these service standards, please contact Statistics Canada toll-free at 1-800-263-1136. The service standards are also published on www.statcan.ca under "About us" > "Providing services to Canadians".

Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

What's new?

- The 2008 Census Subdivision Boundary File is an intercensal edition available free of charge for download from the Statistics Canada website.
- The 2008 Census Subdivision Boundary File portrays the boundaries of all 5,405 census subdivisions which combined cover all of Canada.
- The 2008 Census Subdivision Boundary File depict boundaries that sometimes extend beyond shorelines into water, rather than follow the shoreline, to ensure that all land and islands are included.
- The boundaries, names, codes and status of census subdivisions reflect those in effect on January 1, 2008, the geographic reference date for this edition of the Census Subdivision Boundary File. Information about any census subdivision changes that were effective on or before the January 1, 2008 reference date must have been received by Statistics Canada prior to March 1, 2008, in order to be processed in time for this edition of the file.

1. About this guide

This reference guide is intended for users of the Census Subdivision Boundary File. The guide provides an overview of the file, the general methodology used to create it, and important technical information for users.

Technical specifications in Section 5 include system requirements, installation instructions, a record layout, and item descriptions.

Geographic terms and concepts are briefly described in the glossary (Appendix A). More details can be found in the *2006 Census Dictionary* (Catalogue number 92-566-XWE). Supplementary information is provided in the appendices.

This reference guide does not provide details on specific software packages that are available for use with the Census Subdivision Boundary File. Users are advised to contact the appropriate software vendor for information.

This data product is provided 'as-is', and Statistics Canada makes no warranty, either express or implied, including but not limited to, warranties of merchantability and fitness for a particular purpose. In no event will Statistics Canada be liable for any direct, special, indirect, consequential or other damages, however caused.

2. Overview

Census Subdivision Boundary File

The Census Subdivision Boundary File is a product that depicts boundaries of census subdivision standard geographic units. In this reference guide, the term 'standard geographic units' is used to refer to the geographical levels defined in the *Standard Geographical Classification, Volume I* and geographical levels established primarily for the purpose of collecting and disseminating census data. A diagram illustrating the hierarchy of standard geographic units is included in Appendix B of this guide.

The Census Subdivision Boundary File provides a framework for mapping and spatial analysis. Digital files depict the full extent of the geographical areas, including the coastal water area. The files are available in three formats: ArcInfo® (.shp), Geography Markup Language (.gml) and MapInfo® (.tab).

Reference date

The geographic reference date is a date determined by Statistics Canada to finalize the geographic framework. The geographic reference date for this edition of the Census Subdivision Boundary File is January 1, 2008.

3. How to use this product

Purpose of the product

The Census Subdivision Boundary File portrays the boundaries for census subdivisions and as such often extends as straight lines into bodies of water.

The 2008 Census Subdivision Boundary File is not necessarily compatible with 2006 Census Geography products. It does not replace the 2006 Census Subdivision Boundary File, which is a similar product available as part of the 2006 suite of Geography products, and used in conjunction with products and services from the 2006 Census.

The 2008 Census Subdivision Boundary File supports spatial analysis and thematic mapping of data. With the appropriate computer software, the boundary file provides the framework for thematic mapping to support applications such as: land use and demographic studies, or social, economic and market research. Boundary files can also be used to create new geographic areas by aggregating standard geographic areas and for other data manipulations available with the user's software. The boundary files are positionally consistent with the 2008 Road Network File, which provides additional geographic context for mapping applications.

Using the Census Subdivision Boundary File with other boundary files

When considering using the Census Subdivision Boundary File, one should be aware of the compatibility of this file with other similar files. Other boundary files are available for download on the Internet from other websites; however, they may not be positionally compatible with Statistics Canada files.

Limitations

The positional accuracy of the Census Subdivision Boundary File does not support cadastral, surveying, digitizing or engineering applications.

The data used to create this product are based on source data that had a wide range of scales. Boundary files will not be precise if plotted at a larger scale than the scale of the source material used in its creation.

Comparison with other products

- The 2008 Census Subdivision Boundary File is not necessarily compatible with 2006 Census Geography products. It does not replace the 2006 Census Subdivision Boundary File which is a similar product available as part of the 2006 suite of Geography products, and used in conjunction with products and services from the 2006 Census.
- The *Interim List of Changes to Municipal Boundaries, Status, and Names* (January 2, 2006 to January 1, 2008) may be used to identify changes to Census Subdivision names, types and boundaries between the 2006 Census Subdivision Boundary File and the 2008 Census Subdivision Boundary File.

4. Data quality

Spatial data quality elements provide information on the fitness-for-use of a spatial database by describing why, when and how the data are created, and how accurate the data are. The elements include an overview describing the purpose and usage, as well as specific quality elements reporting on the lineage, positional accuracy, attribute accuracy, logical consistency and completeness. This information is provided to users for all spatial data products.

Lineage

Lineage describes the history of the spatial data, including descriptions of the source material from which the data were derived, and the methods of derivation. It also contains the dates of the source material, and all transformations involved in producing the final digital files or map products.

The geographic area boundaries, names, codes, and the relationships among the various geographic levels are found on Statistics Canada's Spatial Data Infrastructure. These data for administrative areas are updated using information from provincial and territorial sources.

Creation of the Census Subdivision Boundary File

The Spatial Data Infrastructure is the source for the Census Subdivision Boundary File. Primary data manipulation of the product layers included preserving the geographic hierarchy of attributes inherent within a geography. This data manipulation included copying source data to a production environment and the joining of hierarchical geographic attributes. The final data treatment was an output of various file formats supported by Geographic Information System (GIS) software.

Additional formatting

The file was transformed from Lambert conformal conic projection into latitude / longitude coordinates. Finally, the file was verified, translated into French and English versions and appropriately labelled.

The file was converted into three output formats: ArcInfo® [.shp], Geography Markup Language [.gml] and MapInfo® [.tab].

Positional accuracy

Positional accuracy refers to the absolute and relative accuracy of the positions of geographic features. Absolute accuracy is the closeness of the coordinate values in a dataset to values accepted as or being true. Relative accuracy is the closeness of the relative positions of features to their respective relative positions accepted as or being true. Descriptions of positional accuracy include the quality of the final file or product after all transformations.

The boundaries are derived from the Spatial Data Infrastructure. The data in the Spatial Data Infrastructure are stored in double precision. This precision allows features that are next to each other on the ground to be placed in the correct position on the map, relative to each other, without overlap. However, the absolute positional accuracy of the features in the database varies depending on the source of the features.

The Spatial Data Infrastructure is not Global Positioning Systems (GPS)-compliant. However, every possible attempt is made to ensure that the geographic area boundaries maintained in the Spatial Data Infrastructure respect the limits of the administrative entities that they represent (e.g., census division and census subdivision) or on which they are based (e.g., census metropolitan area or census agglomeration). The positional accuracy of these limits is dependent upon source materials used by Statistics Canada to identify the location of limits. In addition, due to the importance placed on relative positional accuracy, the positional accuracy of other geographic data (e.g., road network data and hydrographic data) that are stored within the Spatial Data Infrastructure is considered when positioning the limits of the geographic areas.

Attribute accuracy

Attribute accuracy refers to the accuracy of the quantitative and qualitative information attached to each feature (such as population for an urban area, street name, census subdivision name and code).

As noted under Lineage, the attributes (names, types and codes) for all geographic areas are sourced from the Spatial Data Infrastructure. The names and types for administrative geographic areas are updated using source materials from provincial and territorial authorities.

The attribute data associated with the polygons in the boundary file were independently verified against the data in the Spatial Data Infrastructure and found to be accurate.

Logical consistency

Logical consistency describes the fidelity of relationships encoded in the data structure of the digital spatial data.

All census subdivisions in this file have been verified to have a unique identifier that is valid as of the reference date.

Completeness

Completeness refers to the degree to which geographic features, their attributes and their relationships are included or omitted in a dataset. It also includes information on selection criteria, definitions used, and other relevant mapping rules.

It is important to note that some census subdivisions may be depicted by more than one polygon.

5. Technical specifications

Software formats

The Census Subdivision Boundary File is available for download from the Statistics Canada website in the following formats:

- ArcInfo[®] format version 9.0
File extension: .shp
- Geography Markup Language version 2.1.2
File extension: .gml
- MapInfo[®] format version 8.0
File extension: .tab

Installation instructions

The ArcInfo[®], Geography Markup Language and MapInfo[®] files are compressed into WinZip[®] files (file extension .zip).

An additional template (.tem) file is included with the Geography Markup Language files for use with the free GIS data viewer Java Unified Mapping Platform (JUMP). Also, an XML schema file (.xsd) is included to describe and validate the structure and content of the .gml files.

The Census Subdivision Boundary File contains attributes with accented characters. These characters can be seen in UNIX and Windows[®] versions of ArcInfo[®] and MapInfo[®]. They were tested on desktop versions of ArcGIS[®] 9.0 and MapInfo[®] 7.0, 8.0 and 8.5.

Geographic representation

The Census Subdivision Boundary File is available on the Statistics Canada website in the following geographic representation:

Datum:	NAD83
Coordinates:	Longitude/Latitude (x,y)

Record layout

1. Census subdivision

The Census Subdivision Boundary File contains the boundaries of all census subdivisions which combined cover all of Canada. A census subdivision is an administrative area which is a component of the Standard Geographical Classification. Census subdivision is the general term for municipalities, as determined by provincial and territorial legislation, or areas treated as municipal equivalents for statistical purposes, for example, Indian reserves, Indian settlements and unorganized territories.

Table 5.1 Record layout — ArcInfo® (.shp), Geography Markup Language (.gml), and MapInfo® (.tab) files

Attribute name	Data type	Description
FID	Object ID (4)	Specific to ArcInfo®
Shape	Geometry	Specific to ArcInfo®
Digital Boundary	MultiPolygon PropertyType	Shape geometry; specific to Geography Markup Language.
CSDUID	char (7)	Uniquely identifies a census subdivision (composed of 2-digit province/territory code, 2-digit census division code and 3-digit census subdivision code).
CSDNAME	char (100)	The name provided by federal or provincial/territorial authorities.
CSDTYPE	char (3)	Census subdivisions are classified into 55 types according to designations adopted by provincial/territorial or federal authorities.
PRUID	char (2)	Uniquely identifies a province or territory.
PRNAME	char (100)	Province or territory name
CDUID	char (4)	Uniquely identifies a census division (composed of the 2-digit province/territory code and the 2-digit census division code).
CDNAME	char (100)	Census division name
CDTYPE	char (3)	Census division type

Appendix A Glossary

Adjusted counts

'Adjusted counts' refer to previous census population and dwelling counts that were adjusted (i.e., recompiled) to reflect current census boundaries, when a boundary change occurs between the two censuses.

Block-face

A block-face is one side of a street between two consecutive features intersecting that street. The features can be other streets or boundaries of standard geographic areas.

Block-faces are used for generating block-face representative points, which in turn are used for geocoding and census data extraction when the street and address information are available.

Cartographic boundary files

Cartographic boundary files (CBFs) contain the boundaries of standard geographic areas together with the shoreline around Canada. Selected inland lakes and rivers are available as a supplementary layer.

Census agricultural region

Census agricultural regions (CARs) are composed of groups of adjacent census divisions. In Saskatchewan, census agricultural regions are made up of groups of adjacent census consolidated subdivisions, but these groups do not necessarily respect census division boundaries.

Census consolidated subdivision

A census consolidated subdivision (CCS) is a group of adjacent census subdivisions. Generally, the smaller, more urban census subdivisions (towns, villages, etc.) are combined with the surrounding, larger, more rural census subdivision, in order to create a geographic level between the census subdivision and the census division.

Census division

Census division (CD) is the general term for provincially legislated areas (such as county, *municipalité régionale de comté* and regional district) or their equivalents. Census divisions are intermediate geographic areas between the province/territory level and the municipality (census subdivision).

Census metropolitan area and census agglomeration

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). A CMA must have a total population of at least 100,000 of which 50,000 or more must live in the urban core.

A CA must have an urban core population of at least 10,000. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data.

If the population of the urban core of a CA declines below 10,000, the CA is retired. However, once an area becomes a CMA, it is retained as a CMA even if its total population declines below 100,000 or the population of its urban core falls below 50,000. The urban areas in the CMA or CA that are not contiguous to the urban core are called the urban fringe. Rural areas in the CMA or CA are called the rural fringe.

When a CA has an urban core of at least 50,000, it is subdivided into census tracts. Census tracts are maintained for the CA even if the population of the urban core subsequently falls below 50,000. All CMAs are subdivided into census tracts.

Census metropolitan area and census agglomeration influenced zone

The census metropolitan area and census agglomeration influenced zone (MIZ) is a concept that geographically differentiates the area of Canada outside census metropolitan areas (CMAs) and census agglomerations (CAs). Census subdivisions outside CMAs and CAs are assigned to one of four categories according to the degree of influence (strong, moderate, weak or no influence) that the CMAs and/or CAs have on them.

Census subdivisions (CSDs) are assigned to a MIZ category based on the percentage of their resident employed labour force that has a place of work in the urban core(s) of CMAs or CAs. CSDs with the same degree of influence tend to be clustered. They form zones around CMAs and CAs that progress through the categories from 'strong' to 'no' influence as distance from the CMAs and CAs increases.

Census subdivision

Census subdivision (CSD) is the general term for municipalities (as determined by provincial/territorial legislation) or areas treated as municipal equivalents for statistical purposes (e.g., Indian reserves, Indian settlements and unorganized territories).

Census tract

Census tracts (CTs) are small, relatively stable geographic areas that usually have a population of 2,500 to 8,000. They are located in census metropolitan areas and in census agglomerations with an urban core population of 50,000 or more in the previous census.

A committee of local specialists (for example, planners, health and social workers, and educators) initially delineates census tracts in conjunction with Statistics Canada. Once a census metropolitan area (CMA) or census agglomeration (CA) has been subdivided into census tracts, the census tracts are maintained even if the urban core population subsequently declines below 50,000.

Coordinate system

A coordinate system is a reference system based on mathematical rules for specifying positions (locations) on the surface of the earth. The coordinate values can be spherical (latitude and longitude) or planar (such as Universal Transverse Mercator).

Cartographic boundary files, digital boundary files, representative points and road network files are disseminated in latitude/longitude coordinates.

Datum

A datum is a geodetic reference system that specifies the size and shape of the earth, and the base point from which the latitude and longitude of all other points on the earth's surface are referenced.

Designated place

A designated place (DPL) is normally a small community or settlement that does not meet the criteria established by Statistics Canada to be a census subdivision (an area with municipal status) or an urban area.

Designated places are created by provinces and territories, in cooperation with Statistics Canada, to provide data for submunicipal areas.

Digital boundary files

Digital boundary files (DBFs) portray the boundaries used for 2006 Census collection and, therefore, often extend as straight lines into bodies of water.

Dissemination area

A dissemination area (DA) is a small, relatively stable geographic unit composed of one or more adjacent dissemination blocks. It is the smallest standard geographic area for which all census data are disseminated. DAs cover all the territory of Canada.

Dissemination block

A dissemination block (DB) is an area bounded on all sides by roads and/or boundaries of standard geographic areas. The dissemination block is the smallest geographic area for which population and dwelling counts are disseminated. Dissemination blocks cover all the territory of Canada.

Economic region

An economic region (ER) is a grouping of complete census divisions (CDs) (with one exception in Ontario) created as a standard geographic unit for analysis of regional economic activity.

Ecumene

Ecumene is a term used by geographers to mean inhabited land. It generally refers to land where people have made their permanent home, and to all work areas that are considered occupied and used for agricultural or any other economic purpose. Thus, there can be various types of ecumenes, each having their own unique characteristics (population ecumene, agricultural ecumene, industrial ecumene, etc.).

Federal electoral district

A federal electoral district (FED) is an area represented by a member of the House of Commons. The federal electoral district boundaries used for the 2006 Census are based on the 2003 Representation Order.

Geocoding

Geocoding is the process of assigning geographic identifiers (codes) to map features and data records. The resulting geocodes permit data to be linked geographically.

Households, postal codes and place of work data are linked to block-face representative points when the street and address information is available; otherwise, they are linked to dissemination block (DB) representative points. In some cases, postal codes and place of work data are linked to dissemination area (DA) representative points when they cannot be linked to DBs. As well, place of work data are linked to census subdivision representative points when the data cannot be linked to DAs.

Geographic code

A geographic code is a numerical identifier assigned to a geographic area. The code is used to identify and access standard geographic areas for the purposes of data storage, retrieval and display.

Geographic reference date

The geographic reference date is a date determined by Statistics Canada for the purpose of finalizing the geographic framework for which census data will be collected, tabulated and reported. For the 2006 Census, the geographic reference date is January 1, 2006.

Land area

Land area is the area in square kilometres of the land-based portions of standard geographic areas.

Land area data are unofficial, and are provided for the sole purpose of calculating population density.

Locality

'Locality' (LOC) refers to the historical place names of former census subdivisions (municipalities), former designated places and former urban areas, as well as to the names of other entities, such as neighbourhoods, post offices, communities and unincorporated places.

Map projection

A map projection is the process of transforming and representing positions from the earth's three-dimensional curved surface to a two-dimensional (flat) surface. The process is accomplished by a direct geometric projection or by a mathematically derived transformation.

The Lambert conformal conic map projection is widely used for general maps of Canada at small scales and is the most common map projection used at Statistics Canada.

National Geographic Database

The National Geographic Database (NGD) is a shared database between Statistics Canada and Elections Canada. The database contains roads, road names and address ranges. It also includes separate reference layers containing physical and cultural features, such as hydrography and hydrographic names, railroads and power transmission lines.

The NGD was created in 1997 as a joint Statistics Canada/Elections Canada initiative to develop and maintain a national road network file serving the needs of both organizations. The active building of the NGD – that is, integrating the files from Statistics Canada, Elections Canada and Natural Resources Canada – occurred from 1998 to 2000. Thereafter, Statistics Canada and Elections Canada reconciled their digital boundary holdings to the new database's road network geometry so that operational products could be derived.

Since 2001, the focus of the NGD has been on intensive data quality improvements, especially regarding the quality and currency of its road network coverage. There has been considerable expansion of road names and civic addresses ranges, as well as the addition of hydrographic names. Priorities were determined by Statistics Canada and Elections Canada, enabling the NGD to meet the joint operational needs of both agencies in support of census and electoral activities.

Place name

'Place name' refers to the set of names that includes current census subdivisions (municipalities), current designated places and current urban areas, as well as the names of localities.

Population density

Population density is the number of persons per square kilometre.

Postal code

The postal code is a six-character code defined and maintained by Canada Post Corporation for the purpose of sorting and delivering mail.

Province or territory

Province and territory refer to the major political units of Canada. From a statistical point of view, province and territory are basic areas for which data are tabulated. Canada is divided into 10 provinces and three territories.

Reference map

A reference map shows the location of the geographic areas for which census data are tabulated and disseminated. The maps display the boundaries, names and codes of standard geographic areas, as well as major cultural and physical features, such as roads, railroads, coastlines, rivers and lakes.

Representative point

A representative point is a point that represents a line or a polygon. The point is centrally located along the line, and centrally located or population weighted in the polygon.

Representative points are generated for block-faces, dissemination blocks, dissemination areas, census subdivisions, urban areas and designated places.

Households, postal codes and place of work data are linked to block-face representative points when the street and address information is available; otherwise, they are linked to dissemination block (DB) representative points. In some cases, postal codes and place of work data are linked to dissemination area (DA) representative points when they cannot be linked to DBs. As well, place of work data are linked to census subdivision representative points when the data cannot be linked to DAs.

Road network file

The road network file (RNF) contains roads, road names, address ranges and road ranks for the entire country. Most commonly, address ranges are dwelling-based and are mainly available in the large urban centres of Canada.

Rural area

Rural areas include all territory lying outside urban areas. Taken together, urban and rural areas cover all of Canada.

Rural population includes all population living in the rural fringes of census metropolitan areas (CMAs) and census agglomerations (CAs), as well as population living in rural areas outside CMAs and CAs.

Spatial Data Infrastructure

The Spatial Data Infrastructure (SDI), formerly known as the National Geographic Base (NGB), is an internal, maintenance database that is not disseminated outside of Statistics Canada. It contains roads, road names and address ranges from the National Geographic Database (NGD), as well as boundary arcs of standard geographic areas that do not follow roads, all in one integrated line layer. The database also includes a related polygon layer consisting of basic blocks (BB) (basic blocks are the smallest polygon units in the database, and are formed by the intersection of all roads and the arcs of geographic areas that do not follow roads), boundary layers of standard geographic areas, and derived attribute tables, as well as reference layers containing physical and cultural features (such as hydrography, railroads and power transmission lines) from the NGD.

The SDI supports a wide range of census operations, such as the maintenance and delineation of the boundaries of standard geographic areas (including the automated delineation of dissemination blocks, dissemination areas and urban areas), and geocoding. The SDI is also the source for generating many geography products for the 2006 Census, such as cartographic boundary files and road network files.

Spatial data quality elements

Spatial data quality elements provide information on the fitness for use of a spatial database by describing why, when and how the data are created, and how accurate the data are. The elements include an overview describing the purpose and usage, as well as specific quality elements reporting on the lineage, positional accuracy, attribute accuracy, logical consistency and completeness. This information is provided to users for all spatial data products disseminated for the census.

Standard Geographical Classification

The Standard Geographical Classification (SGC) is Statistics Canada's official classification for three types of geographic areas: provinces and territories, census divisions (CDs) and census subdivisions (CSDs). The SGC provides unique numeric identification (codes) for these hierarchically related geographic areas.

Statistical Area Classification

The Statistical Area Classification (SAC) groups census subdivisions according to whether they are a component of a census metropolitan area, a census agglomeration, a census metropolitan area and census agglomeration influenced zone (strong MIZ, moderate MIZ, weak MIZ or no MIZ), or the territories (Yukon Territory, Northwest Territories and Nunavut). The SAC is used for data dissemination purposes.

Thematic map

A thematic map shows the spatial distribution of one or more specific data themes for standard geographic areas. The map may be qualitative in nature (e.g., predominant farm types) or quantitative (e.g., percentage population change).

Urban area

An urban area has a minimum population concentration of 1,000 persons and a population density of at least 400 persons per square kilometre, based on the current census population count. All territory outside urban areas is classified as rural. Taken together, urban and rural areas cover all of Canada.

Urban population includes all population living in the urban cores, secondary urban cores and urban fringes of census metropolitan areas (CMAs) and census agglomerations (CAs), as well as the population living in urban areas outside CMAs and CAs.

Urban core, urban fringe and rural fringe

'Urban core, urban fringe and rural fringe' distinguish between central and peripheral urban and rural areas within a census metropolitan area (CMA) or census agglomeration (CA).

'Urban core' is a large urban area around which a CMA or a CA is delineated. The urban core must have a population (based on the previous census) of at least 50,000 persons in the case of a CMA, or at least 10,000 persons in the case of a CA.

The urban core of a CA that has been merged with an adjacent CMA or larger CA is called the 'secondary urban core'.

'Urban fringe' includes all small urban areas within a CMA or CA that are not contiguous with the urban core of the CMA or CA.

'Rural fringe' is all territory within a CMA or CA not classified as an urban core or an urban fringe.

Urban population size group

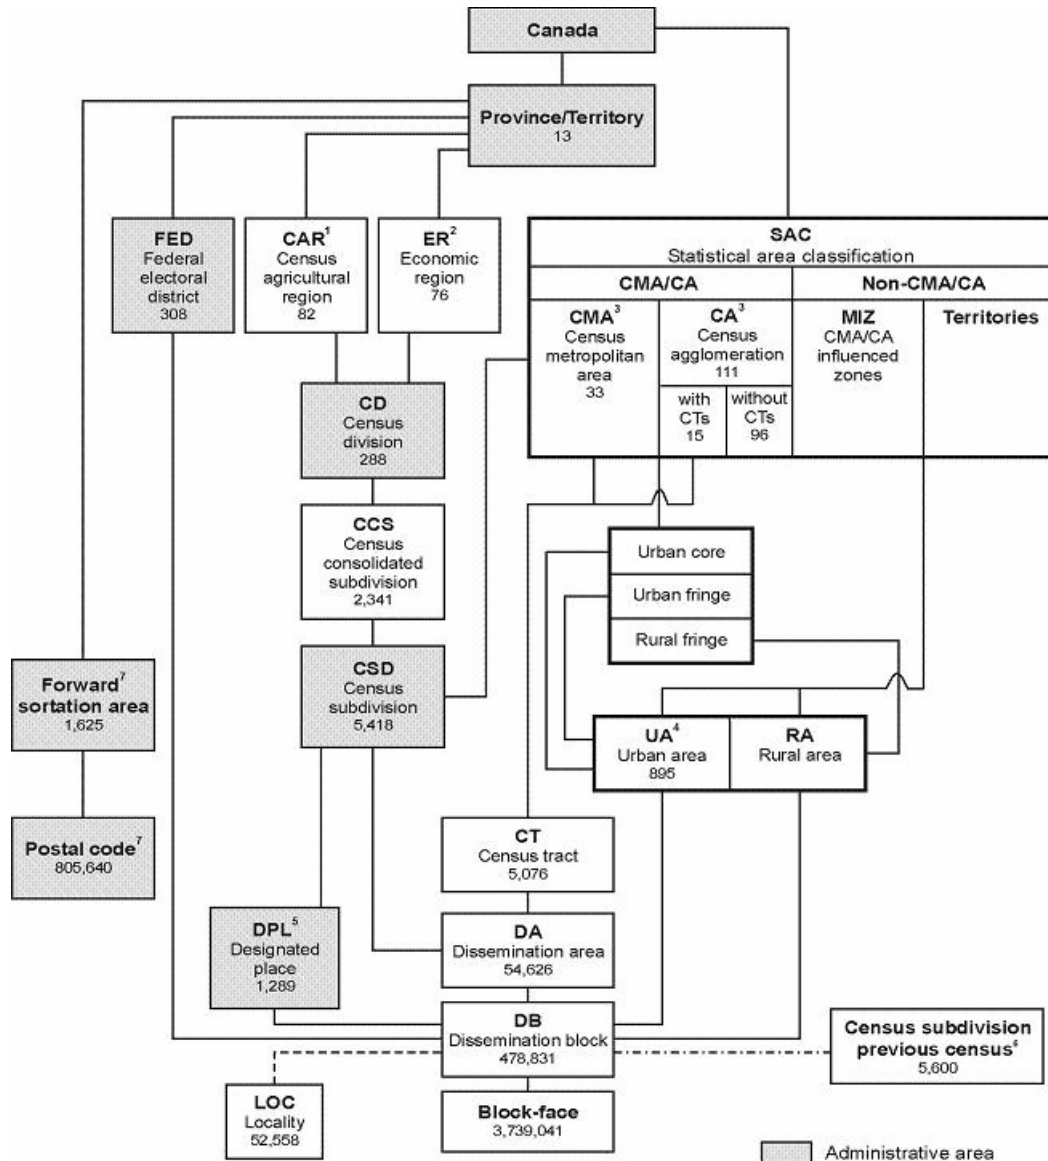

The term 'urban population size group' refers to the classification used in standard tabulations where urban areas are distributed according to the following predetermined size groups, based on the current census population.

1,000	to	2,499
2,500	to	4,999
5,000	to	9,999
10,000	to	24,999
25,000	to	49,999
50,000	to	99,999
100,000	to	499,999
500,000	and over	

Tabulations are not limited to these predetermined population size groups; the census database has the capability of tabulating data according to any user-defined population size group.

Appendix B Hierarchy of standard geographic units for dissemination, 2006 Census

Figure B.1 Hierarchy of standard geographic units for dissemination, 2006 Census

1. Census agricultural regions in Saskatchewan are composed of census consolidated subdivisions.
2. Economic regions are composed of complete census divisions except for one CD in Ontario.
3. One CMA and three CAs cross provincial boundaries.
4. Five UAs cross provincial boundaries.
5. Designated places respect CSD boundaries, but do not cover the total area of CSDs.
6. For the 2006 Census, a best fit linkage is created between the 2001 CSDs and 2006 DBs to facilitate historical data retrieval.
7. Postal codes and forward sortation areas valid as of May 2006 (Canada Post Corporation).

- Administrative area
- Statistical area
- Linkage using point-in-polygon process
- Best fit linkage

Appendix E Spatial file naming convention

Spatial product file names follow a spatial file naming convention. The geographic area and code, file type, geographic reference date, software type and language are embedded within the file name. Standardizing the names of the files facilitates the storage of compressed files, all having the extension .zip.

Each file name is 13 characters in length. All alphabetic characters are in lower case to maintain consistency.

First character: projection of file

g if projection is Geographic (latitude/longitude)
l if projection is Lambert conformal conic

Next three characters: primary geographic area of file

Table E.1 Spatial file naming convention — geographic area of file

Geographic area/product	English file	French file
National/provincial	pr_	pr_
Federal electoral district	fed	cef
Economic region	er_	re_
Census division	cd_	dr_
Census subdivision	csd	sdr
Census agricultural region	car	rar
Census consolidated subdivision	ccs	sru
Census metropolitan area/census agglomeration	cma	rmr
Census tract	ct_	sr_
Urban area	ua_	ru_
Designated place	dpl	ld_
Dissemination area	da_	ad_
Dissemination block	db_	id_
Population ecumene	ecu	eco
Population ecumene - national/provincial	epr	epr
Population ecumene - census division	ecd	edr
Agricultural ecumene	eca	eca
Road network file	rnf	frf
Road network and geographic attribute file	rgf	frg
Forward sortation area	fsa	rta
International boundary files (part of mainland U.S.A. and Alaska as well as Greenland)	int	int
Supporting hydrography (Great Lakes, St. Lawrence River, oceans, etc.)	hy_	hy_

Next three numbers: geographic code of coverage

Table E.2 Spatial file naming convention — geographic code of coverage

National, provincial and territorial coverages	
000	Canada
010	Newfoundland and Labrador
011	Prince Edward Island
012	Nova Scotia
013	New Brunswick
024	Quebec
035	Ontario
046	Manitoba
047	Saskatchewan
048	Alberta
059	British Columbia
060	Yukon Territory
061	Northwest Territories
062	Nunavut

Next character: file type

Table E.3 Spatial file naming convention — file type

Character	Description
a	if digital boundary file, detailed coverage for large-scale mapping excluding hydrographic coverage
b	if cartographic boundary file, detailed coverage for small-scale mapping
c	if detailed interior lakes hydrographic coverage (polygon)
d	if detailed interior rivers hydrographic coverage (line)
e	ecumene
f	if detailed interior lakes hydrographic coverage – closure lines (line)
g	cartographic boundary file, generalized for desktop mapping
h	additional cartographic international boundary coverage and hydrographic coverage of Great Lakes, St. Lawrence River and surrounding oceans
l	if detailed interior islands (part of hydrographic coverage [polygon])
r	road network files

Next two numbers: geographic reference date

The geographic reference date is a date determined by Statistics Canada for the purpose of finalizing the geographic framework for which census data will be collected, tabulated and reported. For the 2006 Census, the geographic reference date is January 1, 2006. The geographic reference date for this edition of the Census Subdivision Boundary File is January 1, 2008.

05	if geographic reference date is 2005
06	if geographic reference date is 2006
07	if geographic reference date is 2007
08	if geographic reference date is 2008

Next character: file format

a	ArcInfo® (.shp)
g	Geography Markup Language (.gml)
m	MapInfo® (.tab)

Final two characters: language

_e	English
_f	French

Example of the use of the file naming convention

The 2008 Census Subdivision Boundary File with English attributes in ArcInfo® format:
gcsd000a08a_e.zip

Appendix F Unique identifiers consistent with other geography products

Unique identifiers are codes that uniquely identify a geographic area within Canada. Data from different files (but for the same geographic area) can be joined or related based on the unique identifier. Caution must be exercised if attempting to join data which is based on different reference years.

Table F.1 Unique identifiers consistent with other geography products

Geographic area	Unique identifier	Code composition
Province/Territory	PRUID	2-digit province code
Federal electoral district	FEDUID	(2-digit province code) and (3-digit federal electoral district code)
Census metropolitan area/Census agglomeration	CMAUID	3-digit census metropolitan area/census agglomeration code Where there are no census metropolitan areas/census agglomerations, this code is NULL.
Census tract	CTUID	(3-digit census metropolitan area/census agglomeration code) and (7-character census tract name) Where there are no census tracts, this code is NULL.
Urban area	UAUID	4-digit urban area code Where there are no urban areas, this code is NULL.
Economic region	ERUID	(2-digit province code) and (2-digit economic region code)
Census division	CDUID	(2-digit province code) and (2-digit census division code)
Census subdivision	CSDUID	(2-digit province code) and (2-digit census division code) and (3-digit census subdivision code)
Census agricultural region	CARUID	(2-digit province code) and (2-digit census agricultural region code)
Census consolidated subdivision	CCSUID	(2-digit province code) and (2-digit census division code) and (3-digit census consolidated subdivision code)
Designated place	DPLUID	(2-digit province code) and (4-digit designated place code) Where there are no designated places, this code is NULL.
Dissemination area	DAUID	(2-digit province code) and (2-digit census division code) and (4-digit dissemination area code)
Dissemination block	DBUID	(2-digit province code) and (2-digit census division code) and (4-digit dissemination area code) and (2-digit dissemination block code)

Appendix G Geography Markup Language (GML)

Scope

The Geography Markup Language (GML) is an XML encoding for the modelling, transport and storage of geographic information including both the spatial and non-spatial properties of geographic features. This specification defines the XML Schema syntax, mechanisms, and conventions that:

- Provide an open, vendor-neutral framework for the definition of geospatial application schemas and objects;
- Allow profiles that support proper subsets of GML framework descriptive capabilities;
- Support the description of geospatial application schemas for specialized domains and information communities;
- Enable the creation and maintenance of linked geographic application schemas and datasets;
- Support the storage and transport of application schemas and datasets;
- Increase the ability of organizations to share geographic application schemas and the information they describe.

United States Bureau of Census (USBC) Partnership – TIGER/GML

Statistics Canada has committed to working with the United States Bureau of the Census (USBC) to ensure cross-border consistency in our products, and foster the development and application of a common, North American data model.

Like the United Kingdom Ordnance Survey and the United States Bureau of the Census, Statistics Canada has chosen to disseminate data in the Open Geospatial Consortium standard Geography Markup Language (GML) format. This standard allows organisations to achieve maximum compatibility not only of format but eventually of content.

Example of 2008 Census Subdivision Boundary File dataset in GML format

Unrestricted use licence agreement for Statistics Canada's 2008 Census Subdivision Boundary File

This is a legal agreement between you, hereinafter referred to as the "Licensee," and Her Majesty the Queen in Right of Canada (Canada) as represented by the Minister of Industry (Statistics Canada), hereinafter referred to as the "Licensor." BY ACCESSING, DOWNLOADING, PRINTING OR USING THE DATA, INFORMATION AND MATERIALS BEING PROVIDED WITH, OR ACCESSIBLE PURSUANT TO THIS AGREEMENT, YOU ARE AGREEING TO BE BOUND BY THE TERMS OF THIS AGREEMENT. IF YOU DO NOT AGREE TO THE TERMS OF THIS AGREEMENT, YOU MUST IMMEDIATELY DISPOSE OF ANY SUCH DATA, INFORMATION, MATERIALS AND ANY DERIVED PRODUCTS.

- I WHEREAS the Licensor is the owner or licensee of intellectual property rights in and to digital data contained in the database known as the 2008 Census Subdivision Boundary File;
- II AND WHEREAS the Licensee wishes to obtain certain rights to the Data, in accordance with the terms and conditions herein contained;
- III AND WHEREAS the Licensor wishes to grant to the Licensee certain rights to the Data, in accordance with the terms and conditions herein contained;
- IV AND WHEREAS the Licensor represents that it has full authority to grant the rights desired by the Licensee on the terms and conditions herein contained;
- V AND WHEREAS the parties hereto are desirous of entering into a licence agreement on the basis herein set forth,

NOW THEREFORE, in consideration of the covenants contained in this Agreement, the parties agree as follows:

1.0 Definitions

- 1.1 "Agreement" means this Unrestricted Use Licence Agreement and all schedules annexed to this agreement, as the same may be amended from time to time in accordance with the provisions hereof.
- 1.2 "Data" means any original and fixed digital data (i.e., that is transmitted electronically), metadata, software or documentation licensed pursuant to the terms and conditions of this Agreement.
- 1.3 "Derived Products" means any product or service created from, or made functional through, the use of all or part of the Data.
- 1.4 "Intellectual Property Rights" means any and all intellectual property rights recognized by the law, including any intellectual property right protected through legislation.
- 1.5 "Licensor's Data" means that Data, the Intellectual Property Rights of which vest with the Licensor
- 1.6 "Licensor's Licensed Rights" means those rights conferred upon the Licensor by third parties over the use of Data which is not the Licensor's Data.
- 1.7 "Modifications" means any modification, enhancement, translation, update or upgrade of all or any part of the Data, in any medium.

2.0 Intellectual property rights

2.1 All title and Intellectual Property Rights in and to the Licensor's Data shall at all times remain the property of the Licensor. All title and Intellectual Property Rights in and to the Data that is not the Licensor's Data are the property of the respective content owners and may be protected by copyright, other intellectual property laws, common law or international treaties.

3.0 Licence grant

3.1 Subject to this Agreement, the Licensor hereby grants to the Licensee a non-exclusive, world-wide, non-assignable, royalty-free right and licence to exercise such of the Licensor's Licensed Rights and such of the Licensor's Intellectual Property Rights in the Data as is necessary to use, reproduce, extract, modify, translate, further develop, distribute the Data, manufacture or cause to be manufactured and sell or license or cause to be sold or licensed Derived Products, and to sub-licence any or all of such rights, PROVIDED:

- (i) all reproductions of the Data shall carry the notices and metadata information set out in section 4 hereof and the provisions contained in sections 5, to be amended in such circumstances by replacing the term "Licensor" as found in the aforementioned provisions with the Licensor's applied title or any such designation as the Licensor may indicate; and
- (ii) all distribution of the Data or licensing by the Licensee of Derived Products containing the Data, and any sub-licence by the Licensee of its rights hereunder, shall be evidenced in writing, shall be on the same terms and conditions as contained herein and shall specifically include the provisions contained in sections 4, 5 and 6.2 hereof, to be amended in the circumstances by replacing in such agreements the term "Licensor" as found in the aforementioned provisions with the Licensor's applied title or any such designation as the Licensor may indicate.

3.2 The Intellectual Property Rights arising from any Modifications or from the manufacture of Derived Products, effected by or for the Licensee, shall vest in the Licensee or in such person as the Licensee shall decide.

4.0 Acknowledgement of source and incorporation of metadata

4.1 The Licensee shall include the following notice where any of the Data is contained within Derived Products,

Source: Geography Division, Statistics Canada, 2008 Census Subdivision Boundary File, 92-162-XWE, 92-162-XWF

The incorporation of data sourced from Statistics Canada within this product shall not be construed as constituting an endorsement by Statistics Canada of such product

or any other notice deemed appropriate by the Licensor.

4.2 The Licensee shall reproduce, include and maintain the following notice on all reproductions of the Licensor's Data produced pursuant to Section 3 above:

Reproduced with the permission of Statistics Canada

4.3 The Licensee shall incorporate in all reproduction and downstream distribution of the Data all metadata included by the Licensor in the provision of the Data.

5.0 Representations, warranties, indemnities

- 5.1 The Licensor makes no representation or warranty of any kind with respect to the accuracy, usefulness, novelty, validity, scope, completeness or currency of the Data, at any time and from time to time, and expressly disclaims any implied warranty of merchantability or fitness for a particular purpose of the Data. The Licensor does not ensure or warrant compatibility with past, current or future versions of computer software to access the Data.
- 5.2 The Licensee acknowledges having received notice of the disclaimer set out above and accepts the Data on an “as is” basis, without representations or warranties of any kind. No oral or written information or advice given by the Licensor, at any time or from time to time, shall create or evidence, or be deemed to create or evidence, a contractual representation, warranty or guarantee of any kind.
- 5.3 The Licensee shall have no recourse against the Licensor, its officers, directors, employees, authorized agents and contractors, whether by way of any suit or action or other, for any loss, liability, damage or cost that the Licensee may suffer or incur at any time, by reason of the Licensee’s possession or use of the Data or arising out of the exercise by the Licensee of its rights hereunder.
- 5.4 The Licensee shall indemnify the Licensor, its officers, directors, employees, authorized agents and contractors from all claims whatsoever alleging loss, costs, expenses, damages or injuries (including injuries resulting in death) arising out of the Licensee’s possession or use of the Data or the exercise by the Licensee of its rights hereunder.
- 5.5 The Licensee’s obligation to indemnify the Licensor, its officers, directors, employees, authorized agents and contractors, under this Agreement shall not affect or prejudice the Licensor from exercising any other rights under law.
- 5.6 The provisions of this Article shall survive termination of this Agreement.

6.0 Termination

- 6.1 This Agreement may be terminated
- (i) automatically and without notice, if the Licensee commits or permits a breach of any of its covenants or obligations under this Agreement;
 - (ii) upon written notice of termination by the Licensee at any time, and such termination shall take effect thirty (30) days after the receipt by the Licensor of such notice; or
 - (iii) upon mutual agreement of the parties.
- 6.2 Upon termination of this Agreement, for whatever reason, the Licensee’s rights under section 3 shall immediately cease; and all obligations of the Parties which expressly or by their nature survive termination shall continue in full force and effect subsequent to and notwithstanding such termination, until they are fully satisfied or by their nature expire. For greater clarity, but without restricting the generality of the foregoing, the following provisions survive termination of this Agreement:
- section 5 (representations, warranties, indemnities)
- 6.3 Notwithstanding subsections 6.1 and 6.2 above, the Licensee may continue to use the Data for the purpose of completing orders of Derived Products made before the termination date of this Agreement
- 6.4 Notwithstanding the termination of this Agreement, all agreements entered into by the Licensee in the exercise of its rights under section 3 thereof prior to such termination and all obligations imposed therein shall continue in full force and effect subject to their terms.

7.0 Generalities

7.1 Applicable Law

This Agreement shall be construed and enforced in accordance with, and the rights of the parties shall be governed by, the laws of Ontario and Canada, as applicable.

7.2 Entirety of Agreement

This Agreement hereto constitute the entire agreement between the parties with respect to its subject matter. This Agreement may only be amended in writing, signed by both parties, which expressly states the intention to amend this Agreement.

7.3 Alternate Dispute Resolution

If a dispute arises concerning this Agreement, or if a proposed modification of any term of this Agreement cannot be agreed between the parties, the parties shall attempt to resolve the matter first by negotiation.

If the parties have not succeeded in negotiating a resolution, then they shall jointly submit the dispute to a mutually accepted mediator. If the parties cannot agree on an acceptable mediator, then either party may submit the dispute to binding arbitration.

The arbitral tribunal shall be governed by the UN Commercial Arbitration Code (the "Code"), referred to in the Commercial Arbitration Act, R.S.C 1985, c. C-4.6, and judgment upon the award rendered by the arbitral tribunal may be entered in any court having jurisdiction over the matter.

The arbitral tribunal shall consist of one arbitrator chosen by the parties.

Subject to the Code, the parties agree that the award and determination of the arbitral tribunal shall be final and binding on both parties, shall be without right of appeal and shall be the exclusive remedy between the parties regarding any claims, counterclaims, issues or disputes presented to the arbitral tribunal.

Costs

The Parties shall bear the costs of the mediation equally, except that each party shall bear its own personal costs of the mediation.

The costs of the arbitral tribunal's fees and expenses shall be shared equally by the parties. The parties shall bear their own personal costs except that the losing party shall pay all costs, fees, levies and taxes arising from and necessitated by the enforcement of the arbitral tribunal's award, including, without limitation, registration, enforcement charges or other judicial levies or costs.

7.4 No Joint Venture

The Parties expressly disclaim any intention to create a partnership, joint venture or joint enterprise. The Parties acknowledge and agree that nothing contained in this Agreement nor any acts of any party shall constitute or be deemed to constitute the parties as partners, joint ventures or principal and agent in any way or for any purpose. No Party has the authority to act for, or to assume any obligation or responsibility on behalf of the other Party. The relationship between the Parties is intended to be, and shall at all times be construed as that of licensor and licensee.

- 7.5 No Waiver
No condoning, excusing or overlooking by the Licensor of any default by the Licensee, at any time or times, in performing or observing any of the Licensee's obligations hereunder, will operate as a waiver, renunciation, surrender of or otherwise affect the rights of the Licensor in respect of any continuing or subsequent default. No waiver of these rights will be inferred from anything done or omitted by the Licensor, except by an express waiver in writing.
- 7.6 Order of Precedence
If there is a conflict or ambiguity between this Agreement proper and any schedules thereto, the interpretation consistent with this Agreement proper (taking into consideration the statements in the recitals and headings) shall prevail and apply, notwithstanding any wording to the contrary in the applicable schedule.
- 7.7 Notices
The Licensor assumes no obligation or liability whatsoever for the provision of updates to the Data or the provision of notices in relation thereto to the Licensee.

Any use whatsoever of this data product shall constitute your acceptance of the terms of this agreement.
