New Home Starts and MLS® Sales Decline in May

Overall housing market activity remained subdued in the month of May in the Halifax Regional Municipality (HRM) as there were fewer new home starts and existing home sales compared to last year. However, average price growth in the resale market remains positive for the year despite the reduced level of activity.

Total housing starts declined by 24 per cent in the month of May due to another weak month in the single-detached segment of the market. There were only 67 single starts last month compared to 115 last May representing a decline of 42 per cent. There was a 16 per cent increase in multi-residential starts last month with 59 new units compared to 51 in

Figure 2

May 2008. The increase was due to 34 apartment unit starts compared to only 14 last year. Semi-detached and row unit starts declined by 32 per cent in May with 25 starts compared to 37 last year.

On a year-to-date basis, there have been 484 total starts in HRM compared to 771 in the January to May timeframe last year representing a decline of 37 per cent. Single-detached starts for the year trail last year's levels by 44.5 per cent with 237 starts compared to 427 last year. Relative strength that has been seen in the semi-detached and row unit segments of the market is beginning to show signs of weakness as semi-detached starts are flat for the year with 46 units while row unit starts are 17 per cent lower after five months of the year compared to last year.

The year-to-date average price of the 422 new home sales in HRM this year is \$323,700, which is 6.3 per cent lower than the average new home price of the 380 sales last year of \$345,583. The decline in price is due to the fact that there has been an increase in new home sales in Dartmouth City and Halifax County East which have average new home

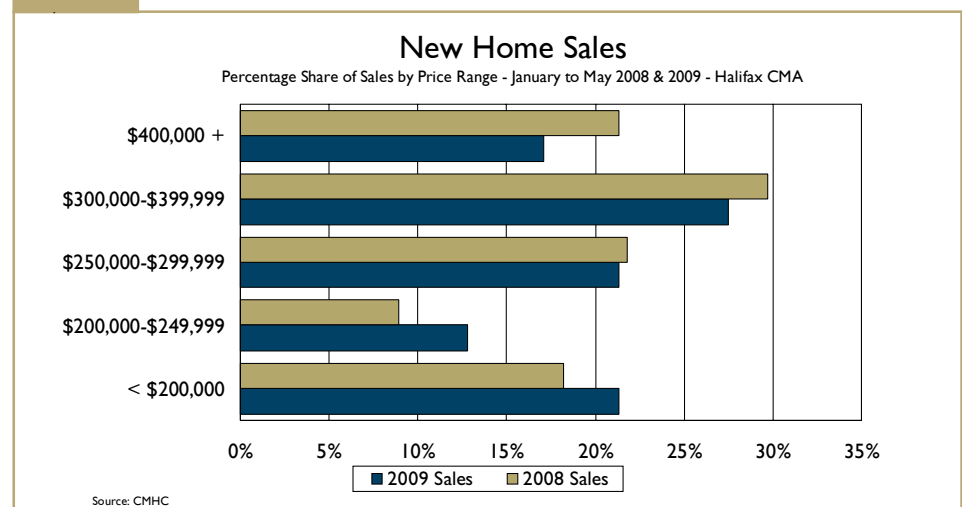

prices of \$241,690 and \$238,690 respectively while there has been a decrease in new home sales in submarkets that have average selling prices in excess of \$350,000, namely Halifax City, Bedford-Hammonds Plains and Fall River-Beaverbank. The end result is a lower overall average new home price for HRM through five months. However, all submarkets with the exception of Halifax City, where the average price has declined by only 0.7 per cent, have recorded an increase in average new home prices this year. The average year-to-date new home price in Bedford-

Hammonds Plains has increased by 17 per cent reaching \$465,812 while the average new home price in Halifax County East has increased by 28 per cent to \$238,095.

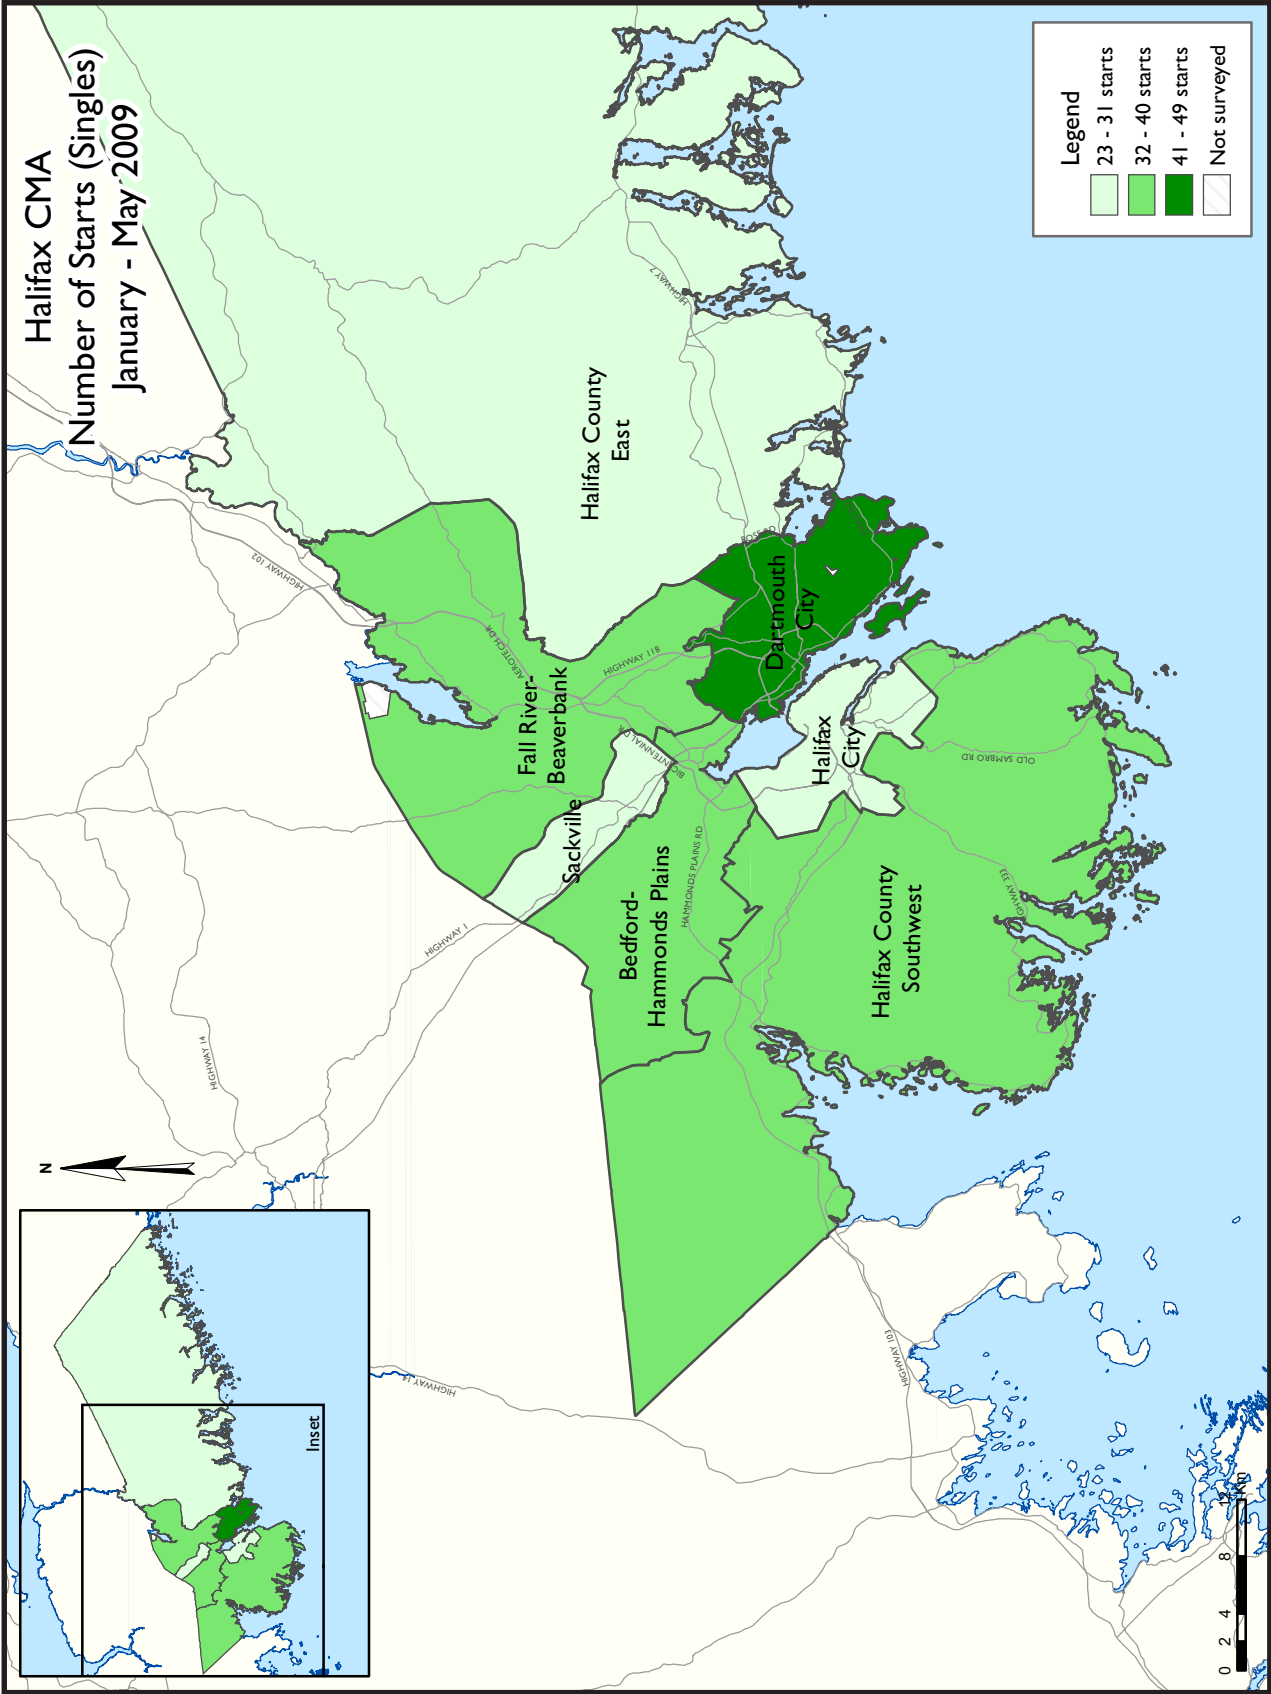

There were 678 MLS® sales in the month of May in HRM compared to 793 last year which represents a 14.5 per cent decline. Sales declined in all submarkets with the exception of Halifax County Southwest which recorded 62 sales in May of this year and last year. There were only two fewer sales in Halifax City with 177 compared to 179 last year, however, Fall River-Beaverbank, Bedford-Hammonds Plains, and Dartmouth City posted monthly declines in sales of 31.5, 26.4 and 23.7 per cent, respectively. The average price in May was \$244,761 which was only slightly higher than last May's average price of \$243,993.

After five months of the year, MLS® sales in HRM trail last year's levels by 24 per cent with double-digit declines in all submarkets. There have been 2,177 existing home sales this year compared to 2,862 last year. Fall River-Beaverbank,

Figure 3

Dartmouth City and Halifax City have posted the largest declines in sales with 32, 28 and 26 per cent fewer sales respectively. Despite the decline in sales, average price growth for the year stands at 3.7 per cent with the average price after five months coming in at \$237,346 compared to \$228,870 last year. Most submarkets in HRM have seen an increase in average selling price with the exception of Halifax County Southwest where the average selling price has declined by 10.6 per cent. The average selling price in Dartmouth City for the 560 sales this year is \$219,556 compared to \$201,251 last year and \$285,663 for the 543 sales in Halifax City compared to \$270,702 last year.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.

For more information, visit our website at www.cmhc.ca

You can also reach us by phone at 1-800-668-2642 or by fax at 1-800-245-9274.
Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is available for free on CMHC's website. You can view, print, download or subscribe to future editions and get market information e-mailed automatically to you the same day it is released. It's quick and convenient!
