Date Released: First Quarter 2009

Saguenay Residential Construction Rises Again in the Fourth Quarter

The latest statistics released by Canada Mortgage and Housing Corporation (CMHC) revealed that residential construction picked up the pace in the fourth quarter of 2008 in the Saguenay census

metropolitan area (CMA). In fact, from October to December, construction got under way on 170 dwellings, or 32 per cent more than during the same period in 2007 (129 units).

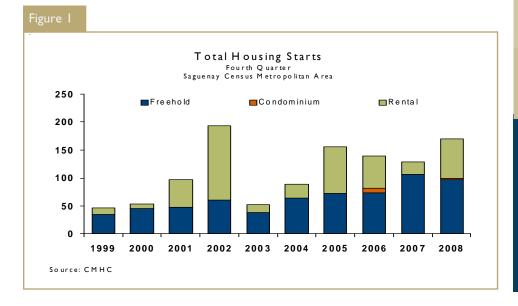

In the fourth quarter, the increase in starts was mainly attributable to rental housing. Activity in this segment posted a gain of more than 200 per cent over the same quarter in 2007, as 70 new apartments were

started. The construction of freehold homes¹, on the other hand, registered a decrease during the last three months of 2008, after having recorded increases in the previous nine quarters. In this segment, there were 97 starts, or just 9 fewer than during the same period in 2007 (106 starts).

With a total of 869 starts, the annual total was on the rise for a fourth straight year. This was a 27-per-cent increase year-over-year and the best result since 1992, when 737 starts had been enumerated. The annual total was slightly higher than what had been anticipated, and all housing types contributed to this result. The growth was particularly strong in the rental housing segment on account of the expansion of a retirement home in Chicoutimi. Demand for freehold homes, for its part, was supported by the relatively stable economic environment of the last two years, which helped reduce the migration deficit in the area. Also, the affordable mortgage rates contributed to maintaining a limited supply on the resale market, which led to a greater demand on the new home market.

The annual totals were positive in three of the four Lac-Saint-Jean urban centres, where the starts volumes exceeded the 2007 levels. These results may seem rather surprising, given the significance of the forest industry in the Lac-Saint-Jean region, but they also indicate

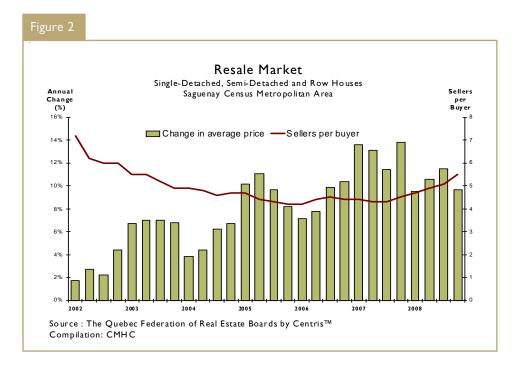

some vigour in other sectors. The monetary incentives, in the form of tax credits, offered to young people settling in resource areas probably helped support construction in these urban centres. Housing starts therefore rose by 250 per cent, by 92 per cent and by 85 per cent in Dolbeau-Mistassini, Alma and Roberval, respectively. In Saint-Félicien, 32 starts were enumerated, for a decrease of 40 per cent from 2007.

In all urban centres with 10,000 or more inhabitants across Quebec, 41,554 starts were enumerated in 2008, for an increase of 2 per cent over 2007. Among the CMAs in the province, four ended 2008 with gains compared to the 2007 results, namely, Saguenay (+27 per cent),

Sherbrooke (+23 per cent), Gatineau (+19 per cent) and Québec (+3 per cent). The other two registered decreases, with the greatest drop having been recorded in Montréal (-6 per cent), followed by Trois-Rivières (-4 per cent).

Fourth quarter much like the first three on the resale market

According to the latest Service interagences / Multiple Listing Service (S.I.A. / MLS)® data, an 18-per-cent decrease in sales of single-family homes² was registered in the fourth quarter of 2008 in the Saguenay census metropolitan area (CMA). In fact, 190 homes were sold through real estate agents from October to

¹ Freehold homes include detached, semi-detached and row houses, as well as duplexes.

² Single-family homes include detached, semi-detached and row houses.

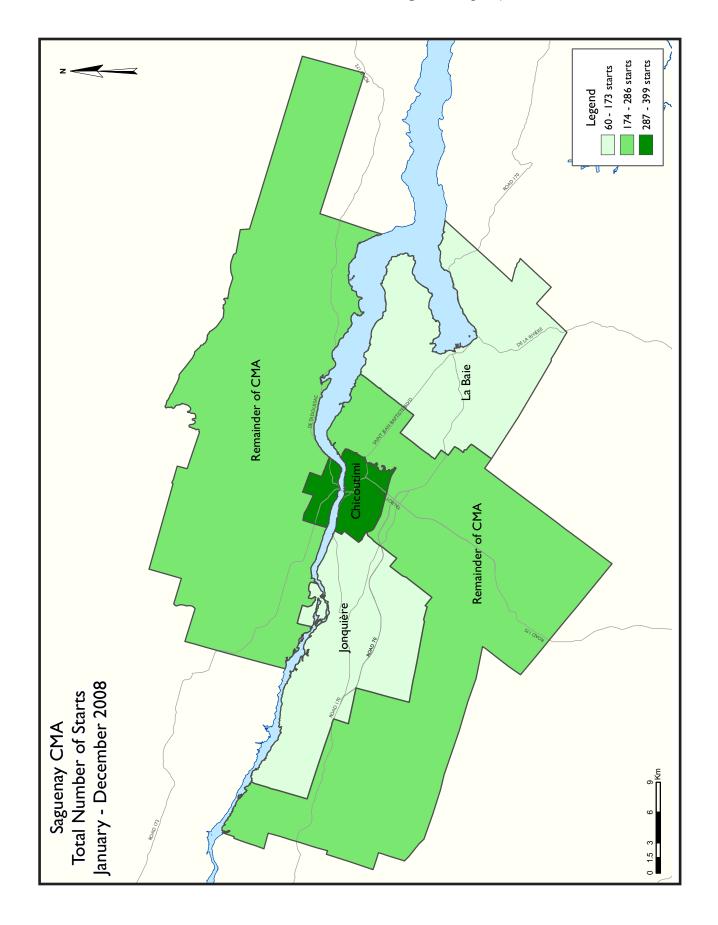

December 2008, compared to 231 during the same period in 2007. This was the fourth decline in as many quarters since the beginning of 2008, bringing the yearly total for the CMA to 1,212 sales in 2008, down by 9 per cent from 2007 (1,325 sales). This annual result was still the fourth highest since the year 2000. The significant increase in single-family property prices in recent years and the job losses that accumulated throughout the past year accounted for the more moderate activity in 2008. On the other hand, the reduction in the migration deficit, the formation of young households and the low mortgage rates all supported the resale market.

Sellers clearly retained the edge throughout 2008. The seller-tobuyer ratio3, which indicates the power relationship between sellers and buyers, reached 5.5 to 1 in the fourth quarter, the highest level recorded in 2008. The decrease in sales combined with a small increase in homes for sale certainly pushed up the seller-to-buyer ratio from January to December 2008, but not sufficiently for the market to become balanced again. It should be noted that active listings went from 494 properties on average in 2007 up to 555 in 2008, thanks to a rise in new listings. Since the imbalance between supply and demand remained, the average selling price of existing single-family properties reached \$149,992 at the end of 2008, or 10 per cent more than in

2007. This increase followed hikes of 14 per cent in 2007 and 10 per cent in 2006. It should be recalled that, in 2004, single-family homes were selling for an average of \$100,000.

Market conditions were particularly tight in two of the four large sectors of the Saguenay CMA (Jonquière and La Baie, with seller-to-buyer ratios below 5 to 1). This had a major impact on average property prices in Jonquière, where a 17-per-cent increase was registered in 2008, and, to a lesser extent, in La Baie (+9 per cent). Chicoutimi-Sud continued to benefit from its central location and. despite a seller-to-buyer of 6.1 to 1, the average price of single-family homes there climbed by 10 per cent in 2008, to \$177,825, the highest level in the CMA.

³ The resale market is considered to be balanced when the seller-to-buyer ratio is between 8 and 10 to 1.A ratio below 8 to 1 signifies a seller's market, while a ratio above 10 to 1 indicates a buyer's market.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, dubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "**start**", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "**completion**", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada's 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
