

RENTAL MARKET REPORT

Ontario Highlights*

Canada Mortgage and Housing Corporation

Release Date: Fall 2008

Figure 1

Highlights

- Ontario vacancy rates moderate to 2.7 per cent in October 2008, down from 3.3 per cent in 2007.
- Vacancy rates decline for all bedroom types particularly 2-bed and 3-bed units.
- Rental demand increased and vacancy rates moved lower, particularly in more expensive ownership markets.
- Centres tied to business prospects in the US saw local economies and rental demand slow given moderating US economic growth.
- Fixed sample 2-bed apartment rents increased above provincial rent review guideline amount but failed to match increases in the cost of living index.
- Notable factors adding to rental demand include: the rising cost gap between owning and renting, greater economic uncertainty, fewer purpose built rental completions and rising immigration.
- Notable factors weighing on rental demand include: competitive pressures from the condominium apartment segment and slowing job prospects for youth.

Figure 2

*Only centres with a population of 10,000 + are included in the survey. Detailed reports are available for CMAAs.

Ontario Vacancy Rate Edges Lower

For a fourth consecutive year, Ontario rental apartment vacancy rates edged lower, moving to a level not seen since 2002. Ontario vacancy rates dropped to 2.7 per cent this year, down from 3.3 per cent in the fall of 2007. While vacancy rates dropped across all bedroom types, the drop was more pronounced for two and three bedroom apartment units. Despite recent declines in Ontario vacancy rates, provincial vacancy rates still remain above averages posted in the past couple of decades.

Movements in vacancy rates varied across the province. More expensive ownership markets such as Toronto, Ottawa and Hamilton saw a pick-up in rental demand and vacancy rates moved lower. Northern Ontario vacancy rates also tightened with Thunder Bay vacancies dropping while Sudbury vacancy rates remained at historically low levels. While more metropolitan centres registered vacancy rates at or below last year's levels, there were some notable exceptions. A moderating US consumer sector continued to weigh on Windsor, Oshawa and St. Catharines-Niagara economies dampening the demand for rental accommodation. Consequently, vacancy rates moved higher and above provincial averages in these centres.

Above average Ontario vacancy rates kept the growth in 2-bedroom apartment fixed sample rents below October's increase in the cost of living index (all items CPI). Fixed sample apartment rents for 2-

bedroom units rose by 2 per cent in October 2008, lower than the 2.6 per cent increase in the inflation rate. Nevertheless, fixed sample apartment rents increased by more than the provincial rent review guideline amount for 2008.

While general economic conditions highlighted above influence rental markets, the balance between rental demand and supply determines the level of vacancy rates. A number of factors have increased rental demand and put downward pressure on provincial vacancy rates. Firstly, according to CMHC's *Home Purchase and Renovation Survey*, fewer renter households have been in the market planning a home purchase in recent years and this story was supported by lower ownership sales through 2008. Instead, more renter households opted to remain in rental accommodation.

A second factor helping boost rental demand is Ontario's immigration story. While Ontario's share of immigration into Canada has slowed in recent years, immigration into Ontario has risen since the fall of 2007. Immigrants typically lack the savings and work experience to qualify for homeownership. Approximately 75 per cent of immigrants opt for rental accommodation upon first arriving into Canada.

On the supply side, fewer purpose-built rental apartments reached the completion stage in 2008. This helped sustain demand for existing purpose-built rental accommodation and limited any competitive headwinds for the existing rental stock.

While vacancy rates moved lower, other factors weighed on conventional apartment rental demand. A notable factor was an increase in condominium ownership and rental completions. On the ownership front, more apartments reached the completion stage since last fall. First time buyers find condominium apartment dwellings as an affordable entry point into the ownership market. With more renter households taking occupancy of their new apartments, some vacated their existing rental units – putting upward pressure on vacancies. Meanwhile, some condominiums that reached the completion stage were bought by investors. Condominiums represent a source of rental accommodation for prospective renter households. Condominiums, have in recent years, been a competing form of rental accommodation as evidenced by lower and declining rental vacancy rates.

A second factor weighing on rental demand was softer labour market experiences of core renter households. After a string of years of solid employment gains among 15-24 year aged Ontario households, employment stalled for this group in the past 12 months. Some younger households typically leave the parental home and opt for rental accommodation when jobs are plentiful.

Consequently, a decline in job growth among youth across the province combined with increasing competition from the condominium sector was not enough to offset rising rental demand arising from a rising cost gap between owning and renting and higher immigration

CMHC's October Rental Market Survey, which covers private row and apartment structures with three or more units, is being expanded to include information on the secondary rental market. More specifically, CMHC will now provide information on apartment condominiums offered for rent in the following centres: Vancouver, Calgary, Edmonton, Toronto, Ottawa, Montréal and Québec. The additional information

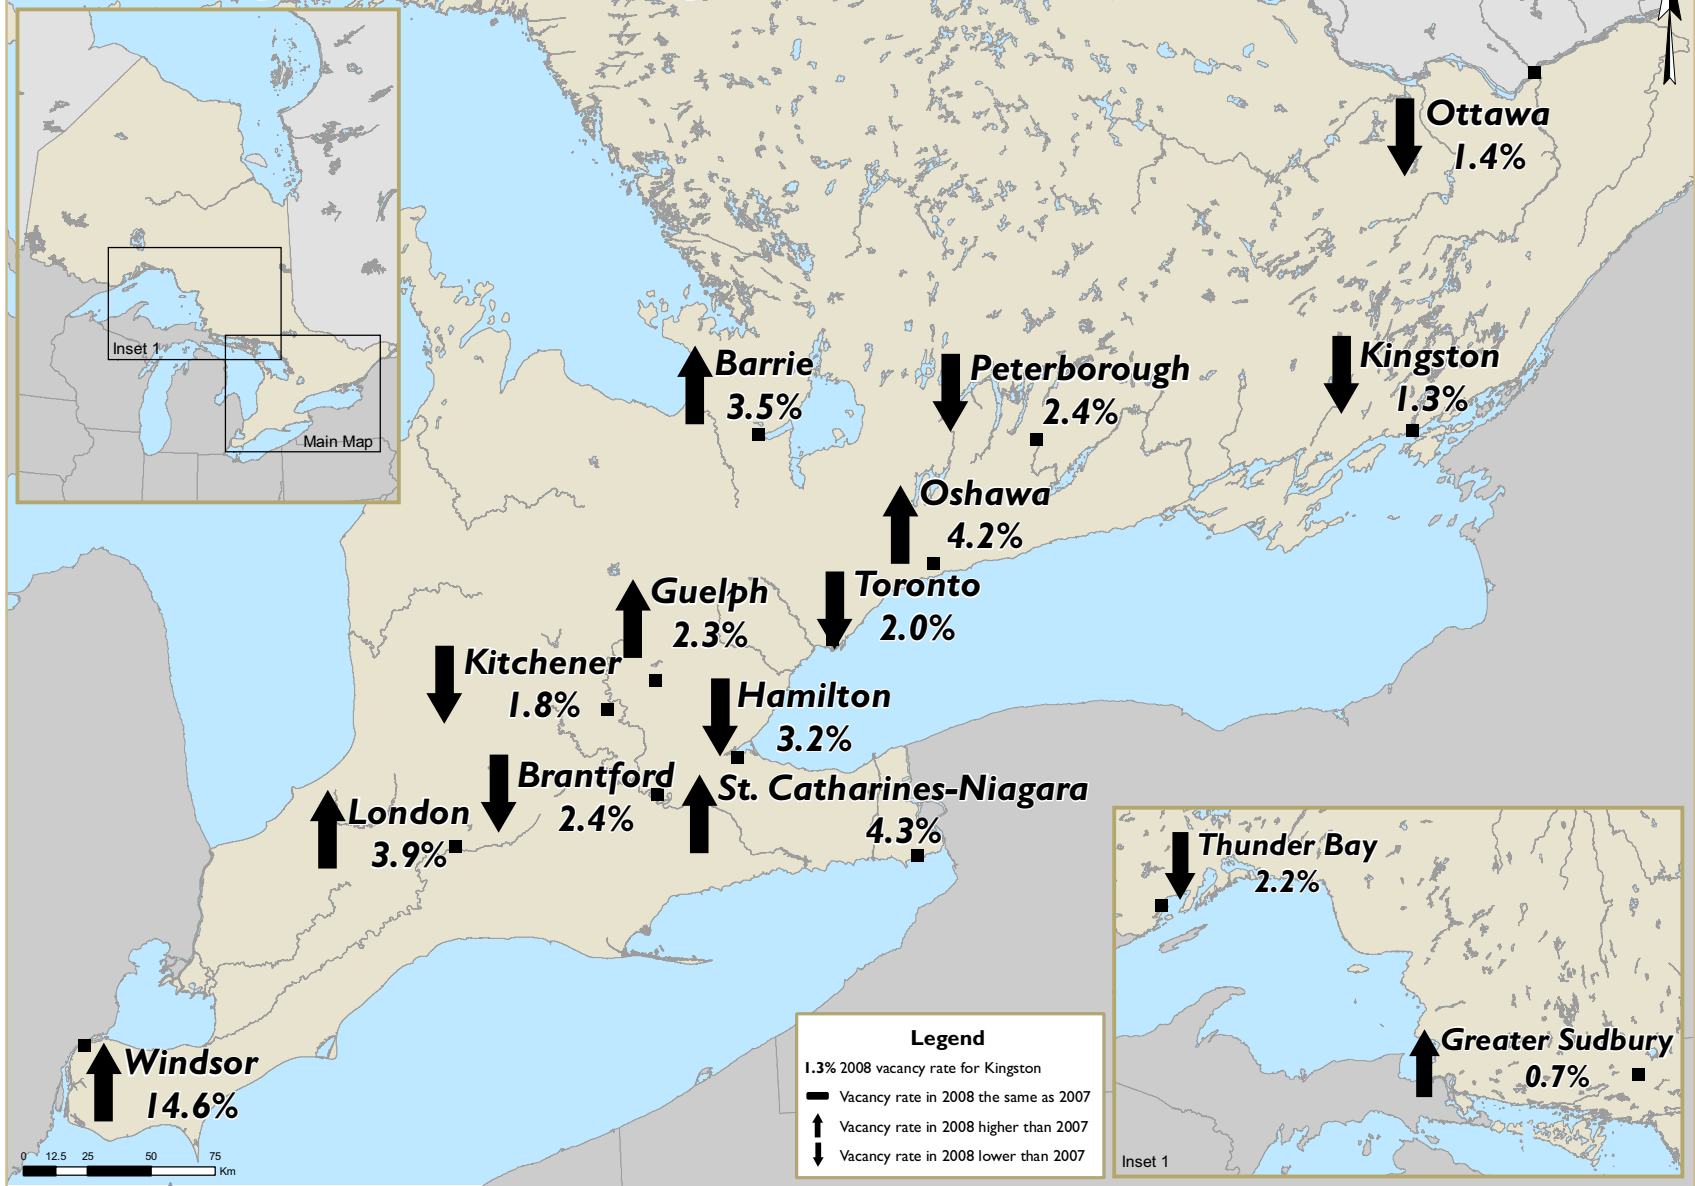

should help to provide a more complete overview of the rental markets in those centres. Also, for the Vancouver, Toronto and Montréal CMAs, the following types of units are now surveyed:

- rented single-detached houses;
- rented double (semi-detached) houses;
- rented freehold row/town houses;

- rented duplex apartments;
- rented accessory apartments;
- rented apartments which are part of a commercial or other type of structure containing one or two dwelling units.

The methodology section at the end of this report provides more detailed information on the Secondary Rental Market Survey.

¹The Estimate of Percentage Change is a measure of the market movement, and is based on those structures that were common to the survey for both years.

The following letter codes are used to indicate the reliability of the estimates:

a – Excellent, b – Very good, c – Good, d – Fair (Use with Caution)

** Data suppressed to protect confidentiality or data is not statistically reliable

++ change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0)

¹The Estimate of Percentage Change is a measure of the market movement, and is based on those structures that were common to the survey for both years.

The following letter codes are used to indicate the reliability of the estimates:

a – Excellent, b – Very good, c – Good, d – Fair (Use with Caution)

** Data suppressed to protect confidentiality or data is not statistically reliable

++ change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0)

¹The Estimate of Percentage Change is a measure of the market movement, and is based on those structures that were common to the survey for both years.

The following letter codes are used to indicate the reliability of the estimates:

a – Excellent, b – Very good, c – Good, d – Fair (Use with Caution)

** Data suppressed to protect confidentiality or data is not statistically reliable

++ change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0)

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data from sampled structures. Most RMS data contained in this publication refer to privately initiated apartment structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. In October 2006, CMHC has introduced a new measure for the change in rent that is calculated based on existing structures only. This estimate is based on structures that were common to the survey sample the previous year and the current year of the Rental Market Survey. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in the Rental Market Report – Canada Highlights, Provincial Highlights, and the local Rental Market Reports. The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market (SRMS)** in September and October to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS. CMHC has identified the following dwelling components to be included in SRMS:

- Rented single-detached houses.
- Rented double (semi-detached) houses (i.e.. Two units of approximate equal size and under one roof that are situated either side-by-side or front-to-back).
- Rented freehold row/town homes.
- Rented duplex apartments (i.e.. one-above-other).
- Rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type).
- Rented condominiums (can be any dwelling type but are primarily apartments).
- One or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents.
- A Condominium Apartment Vacancy Survey of condominium apartment owners to collect vacancy information.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the owner, manager, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in September and October, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates for the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability. In 2008, rented condominium apartments were surveyed in the following CMAs: Vancouver, Victoria, Calgary, Edmonton, Regina, Saskatoon, Toronto, Ottawa, Montréal and Québec (NOTE: condo rent data was not collected for Regina and Saskatoon). Other secondary rental market units were surveyed in Abbotsford, Barrie, Calgary, Edmonton, Halifax, Montreal, Ottawa, Quebec, St. John's, Toronto, Regina, Saskatoon, Kelowna, Vancouver and Victoria.

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

All data presented in this publication is based on Statistics Canada's 2001 and 2006 Census area definitions.

Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

Rental Affordability Indicator

Canada Mortgage and Housing Corporation has developed a new rental affordability indicator to gauge how affordable a rental market is for those households which rent within that market. The level of income required for a household to rent a median priced two-bedroom apartment, using 30 per cent of its income, is calculated. The three-year moving average of median income of households in a centre is then divided by this required income. The resulting number is then multiplied by 100 to form the indicator. A value above 100 indicates that less than 30 per cent of the median income is required to rent a two-bedroom apartment, conversely, a value below 100 indicates that more than 30 per cent of the median income is required to rent the same unit. In general, as the indicator increases, the market becomes more affordable; as the indicator declines, the market becomes less affordable.

Median renter household income estimates used in the calculation of the rental affordability indicator are based on results of Statistics Canada's Survey of Labour and Income Dynamics. Results for this survey are available from 1994 to 2005. CMHC has developed forecasts of median renter household income for 2006, 2007 and 2008.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
