

RENTAL MARKET REPORT

British Columbia Highlights

Canada Mortgage and Housing Corporation

Date Released: Spring 2009

BC Highlights

- Rental market conditions eased in the spring compared to a year ago. Vacancy rates increased compared to last spring, however rents were higher.
- Two-bedroom average rents in existing structures rose 3.4 per cent from one year ago. The average rent for a two-bedroom

apartment in new and existing structures was \$1,003 in April 2009.

- The availability rate was 3.3 per cent, up from 1.8 per cent last spring.

Vacancy Rates Move Higher

The average apartment vacancy rate in urban British Columbia centres

was 2.3 per cent in April 2009, compared to 1.1 per cent in April 2008. Vacancy rates in British Columbia were among the lowest in Canada.

Vacancy rates increased in most centres. The apartment vacancy rate in the Victoria Census Metropolitan Area (CMA) and the Vancouver CMA increased by 0.9 and 1.0 percentage points, to 1.2 and 1.9 per cent, respectively. Despite the increases, vacancy rates in the two largest urban centres were below the provincial average.

The lowest vacancy rates in British Columbia were recorded in Salmon Arm (0.3 per cent) and Parksville (0.8 per cent). These areas tend to have higher population growth fuelling demand for rental housing and less new supply from purpose-built rental or secondary rental.

Squamish was one of only three centres to report a decline in the apartment vacancy rate, from 4.2 per cent to 1.3 per cent in April 2009. Demand for rental accommodation in this centre reflects, in part, the spill-over of rental demand from the surrounding area, including Whistler.

Figure 1

Figure 2

Factors Behind Increased Vacancy Rates

An increase in rental supply and a decrease in rental demand pushed vacancy rates higher. The secondary market continues to be the main source of new rental accommodation. Purpose built rental buildings added less than 1,400 units to the rental supply.

Growing competition from investor-owned condominiums and other types of secondary rental units contributed to the increase in the purpose-built rental vacancy rate. In the Vancouver CMA, investor-owned condominiums make up about one-quarter of condominiums, with an estimated 90 per cent of those rented out. More than half of renters in Vancouver live in secondary rental units, including investor condominiums which occupy the higher end of the rental apartment market. In the Victoria CMA, the proportion of investor-owned condominiums is also about one-quarter, although not all of these are available for rent.

The movement of first-time homebuyers from rental into homeownership freed up purpose-built rental units. The number of condominium apartment units under construction in the province's larger urban centres (with more than 50,000 people) has been relatively high. As these homes were finished, people were able to move from rental to their newly completed condominium, increasing rental vacancies. As well, lower home prices and low mortgage rates have reduced the gap between the cost of homeownership and the cost of renting, encouraging first-time buyers into the ownership market.

In addition, completed units entered the rental market as investor-owned condominiums, providing more choice for renters, but often at higher rents than purpose-built rental apartments.

On the demand side, a slowdown in the British Columbia economy and job markets is contributing to the increase in the rental vacancy rate. The slowdown in the job market may have encouraged young people, who

tend to be renters, to stay in their parental home or to share accommodation with friends, reducing rental demand. The unemployment rate for persons aged 15 to 24 years rose to 13.5 per cent in March 2009 compared to 6.9 per cent in March 2008.

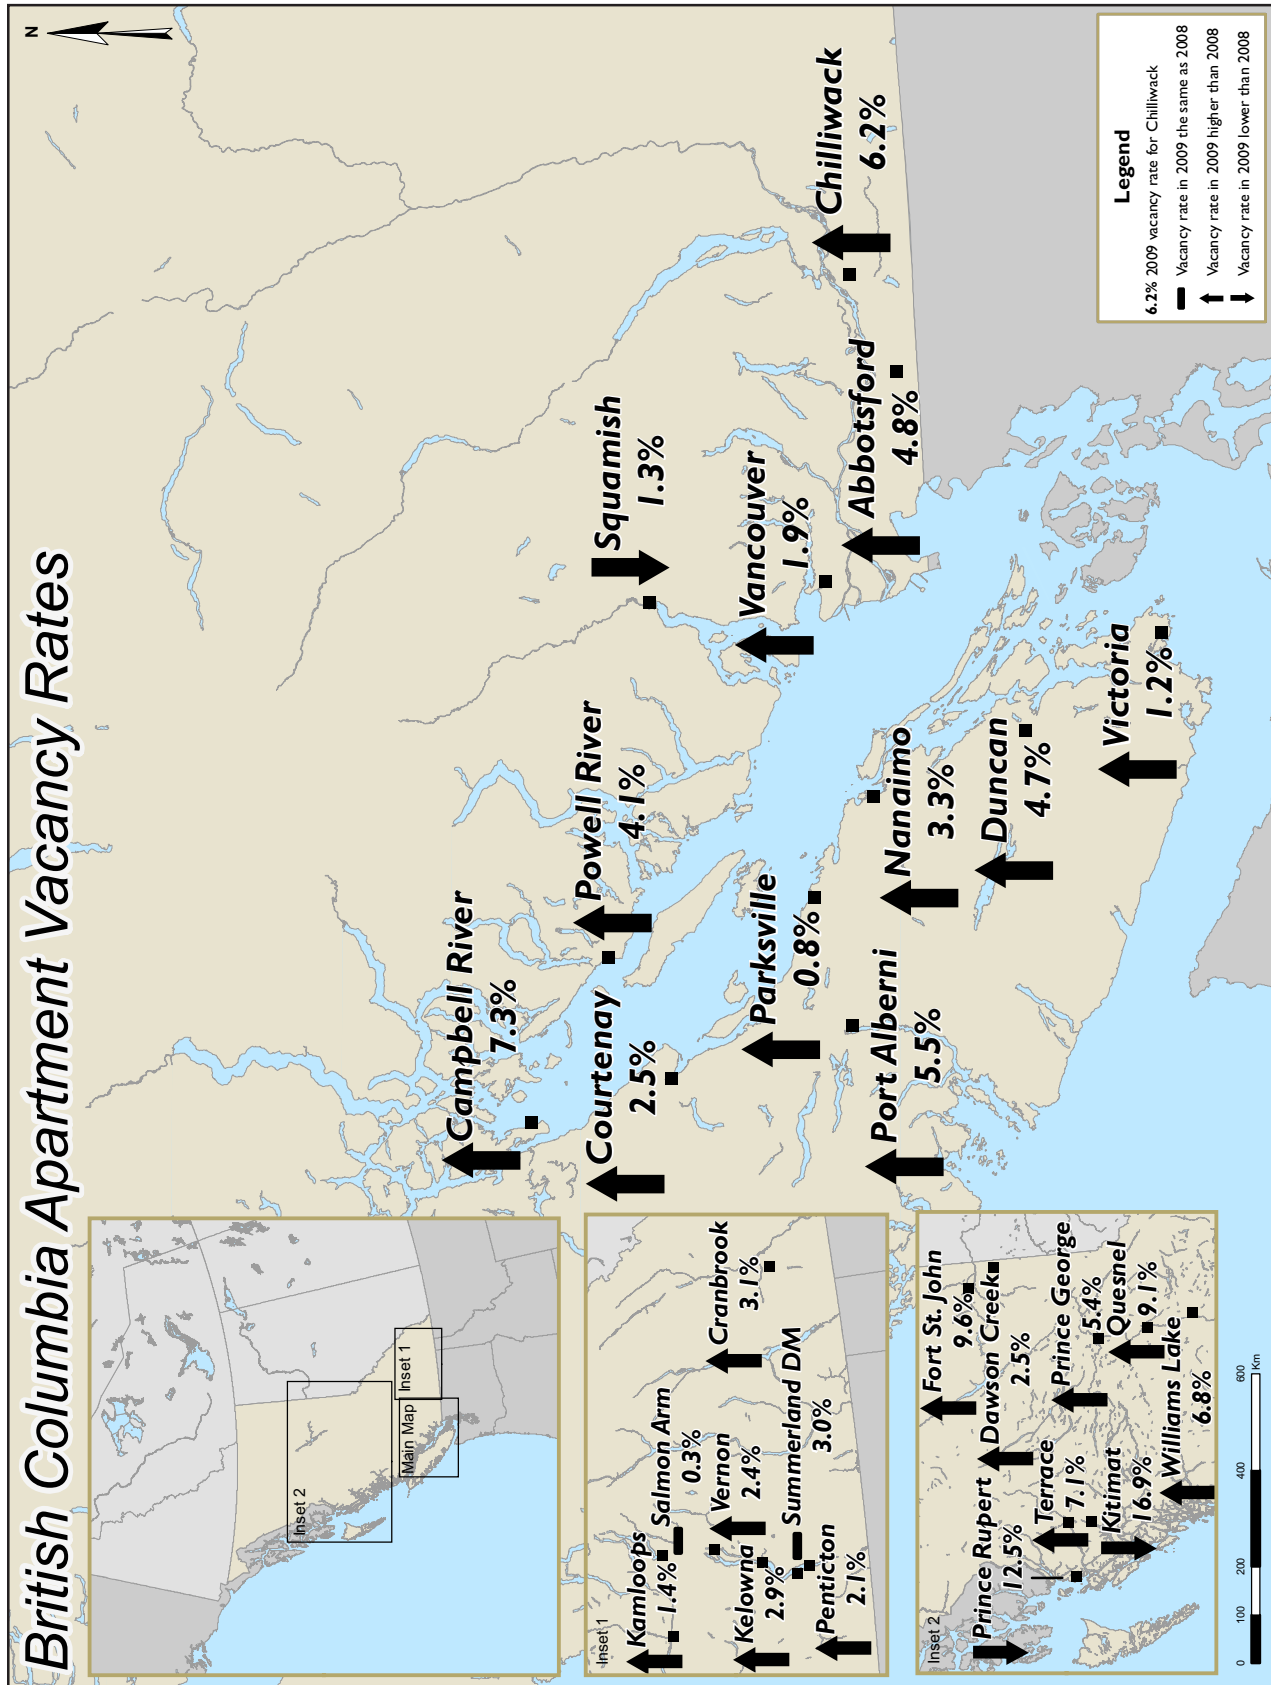

Population-driven rental demand has slowed. Migration is the main source of population growth in British Columbia. Fewer people moving to the province from the rest of Canada, lowered rental demand. However, international migration remained strong fuelling rental demand in the larger urban centres.

Average Rents Increased

Average rents moved higher. For a two-bedroom apartment, the pace of increase in structures common to this April's and last April's survey slowed to 3.4 per cent compared to 5.5 per cent the previous year. Apartments with three or more bedrooms reported the largest increase in average rents, up 4.2 per cent compared to April 2008, despite an increase in the vacancy rate (from 1.3 per cent to 3.0 per cent). The average rent for a one-bedroom apartment increased the least.

More Rental Homes Available

The Spring Rental Market survey reported an increase in the availability rate for rental units. A rental unit is available if the unit is vacant, or the existing tenant has given or received official notice to move out and a new tenant has not signed a lease. In April 2009, the availability rate was 3.3 per cent, compared to 1.8 per cent last April.

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a – Excellent, b – Very good, c – Good, d – Fair (Use with Caution)

** Data suppressed to protect confidentiality or data is not statistically reliable

++ change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0)

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a – Excellent, b – Very good, c – Good, d – Fair (Use with Caution)

** Data suppressed to protect confidentiality or data is not statistically reliable

++ change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0)

n/u: No units exist in universe for this category n/s: No units exist in the sample for this category n/a: Not applicable

Please click [Methodology](#) or [Data Reliability Tables Appendix links](#) for more details

TECHNICAL NOTE:

Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in 2008 vs. \$550 in 2009 represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the 2008 and 2009 Spring Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The data collected for a structure depends on whether it is an apartment or a row structure. The survey collects market rent, available and vacant unit data for all sampled structures. Most RMS data contained in this publication refer to privately initiated apartment structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. There also exists a measure for the change in rent that is calculated based on existing structures only. The estimate is based on structures that were common to the survey sample for both the April 2008 and April 2009 Rental Market Surveys. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in all Canada and Provincial Highlights publications, and also in the CMA reports (fall survey only). The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

Acknowledgement

The Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, and building superintendents throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
