New Home Market

Regina housing starts slow in first three quarters of 2009

Builders have cut back on starts this year in order to reduce inventory. Regina's builders started 411 single-detached homes to the end of September, down 45 per cent from

2008 at that time. The level of single-detached units under construction was down by 26 per cent compared to September 2008.

Completions are rising and there were 43 completed new single-detached homes remaining unsold this September. This was 19 per cent more than one year prior and the highest September inventory of unsold units since 2001.

At an average current absorption rate for 2009 of 72 units per month, it would take the market approximately 10 months to deplete the single-detached homes in supply at the end of September. One year earlier, the 908 single-detached homes that were in supply could sustain 15 months of demand, as the market was absorbing an average of approximately 60 single-detached units per month.

Share of single starts in surrounding area climbs

To the end of September, there were 118 single-detached homes started in Regina's surrounding area, down 49 per cent from 2008 at this time. These captured 28.7 per cent of the Census Metropolitan Area's total single starts over this period, compared with a share of 31.4 per cent by this time last year. This suggests that buyers' preference for purchase in developments surrounding the city of Regina is down from last year. With major new land projects coming on stream within the city limits, we expect the city's share to increase going forward.

Average price of new homes up 8.6 per cent

The average price of single-detached units absorbed to the end of September reached \$378,241, an increase of 8.6 per cent over the 2008 figure (after nine months) and five per cent above the 2008 year-end figure of \$359,795. These increases are far below the double-digit increases of 2005 to 2008 and result from the abundant supply of new singles. Resale housing is also at historically high levels leading to increased competition between these two markets.

Figure 2

Source: CMHC

Notwithstanding a slower increase in the average price, absorptions of homes priced in excess of \$350,000 have gained market share while all price ranges less than this amount have seen declines in share. This compositional effect has helped to drive average price upward, although at a slower pace than previous years.

Increase in New House Price Index slows

To the end of August, Statistics Canada's New House Price Index (NHPI) in Regina advanced by eight per cent year-over-year, compared with a 28 per cent gain in 2008 during this time. Lower pressures on both components of this index, house and land, have led to a slowdown in overall year-over-year growth. Price pressures on the house component of the NHPI have decreased due to lower demand for labour and building materials. The land component of the NHPI has also dropped recently, with the introduction of new sub-divisions leading to more supply.

Multiple starts down 29 per cent

By the end of September, the capital recorded 252 multiple starts, down 29 per cent from that time in 2008. As has been seen in the single-detached housing market, builders are limiting new housing starts in order to market their current inventories.

In September 2009, there was a supply of 670 multiple units, 18 per cent higher than one year earlier. The September supply of multiples was a record high due largely to the 630 units that were underway during that month. The under construction count was up 16 per cent year-over-year. Before August, this level of under construction was the highest since January 1984.

Inventory of multis shows signs of decline

The September 2009 inventory of multiple units that were completed but not absorbed is showing signs of decline. There were 40 multiple units in inventory this September, up 74

per cent from last year at that time. However, September was the second consecutive month the inventory of multi units had declined on a month-over-month basis.

Most of the units that were completed and unoccupied at the time of our survey were apartment style condominiums with 25 units complete and ready for occupancy. However, the number of row units completed and awaiting sale is starting to increase. This housing type had 14 units in inventory in September, compared to five in September 2008.

Resale Market

Slower price growth and low mortgage rates leading to more resales

Sales of existing homes in Regina through the first nine months of the year totalled 2,940 units, representing an increase of seven per cent compared to this time last year. Seasonally adjusted sales have been trending up at a rate of 3.3 per cent monthly since January. Slower price growth and low mortgage rates have encouraged potential homebuyers to re-enter the market.

New listings activity has seen year-over-year declines since May and has been trending down at a seasonally adjusted average rate of 2.7 per cent monthly this year. Escalating sales and a lower pace of new listings have helped reduce active listings from the June peak of 1,776 units to a current level of 1,364 listings. At the current rate of monthly sales, the inventory of active MLS® listings is sufficient to last 3.5 months, a measure in decline since March 2009.

The sales-to-active listings ratio in September 2009 was 25.1 per cent compared to the September 2008 figure of 16.6 per cent. The seasonally adjusted sales-to-listings ratio has been on the rise since March and, at 28.4 per cent, is the highest since June 2008.

Average resale price up six per cent but growth slowing

Average resale price growth is slowing in Regina. The year-to-date average price for September was \$243,868, representing a six per cent increase over the comparable figure in 2008. The seasonally adjusted average price flattened out with a 0.2 per cent decline from August to September. This marks the sixth straight month of declines in seasonally adjusted average price.

A number of factors have contributed to weaker price growth this year. A withdrawal of investor dollars and an elevated inventory of active listings due to a surge in new listings were the initial factors that slowed the rise in average price. Additionally, consumers began to resist the extraordinary price increases in the ownership market, adding to the decline in sales.

Compositional effects have also contributed to a slowdown in price gains compared to 2007 and 2008. In 2009, there has been a shift to a higher proportion of sales in the mid ranges. The proportion of home sales in the \$400,000+ price range has fallen off this year while the \$200,000 to \$275,000 price range has seen an increase. New and existing condominiums are entering the market and these lower-priced units are helping to contain average price growth.

However, other factors are supporting average price gains. Listings are falling off and sales have shown an uptick, leading to a recent rise in the sales-to-listing ratio. The industry is also reporting that there is more competition for homes in affordable price ranges.

Current days on the market now stand at 44 days compared to 25 last September. Seasonally adjusted trend figures are stable at 51 for both August and September. As older listings become a smaller proportion of sales and newer listings gain a larger share, this variable will decline.

Economy

Employment sees 4.7 per cent increase by end of third quarter

Regina's seasonally adjusted employment has grown by 5,300 jobs so far in 2009, a gain of 4.7 per cent to reach almost 119,000 positions. Seasonally adjusted unemployment is up 30.6 per cent to 5,600 unemployed. The seasonally adjusted unemployment rate now stands at 4.6 per cent, up one percentage point from the end of the third quarter in 2008.

Industry specific data from Statistics Canada suggest both the goods and service producing sectors have seen an increase in employment this year with the biggest gains in the service sector. Nearly all of the service sector gains originated in accommodation and food services industries although the management, administrative and other support sector has also contributed. In the goods sector, construction continues to provide the lion's share of job growth.

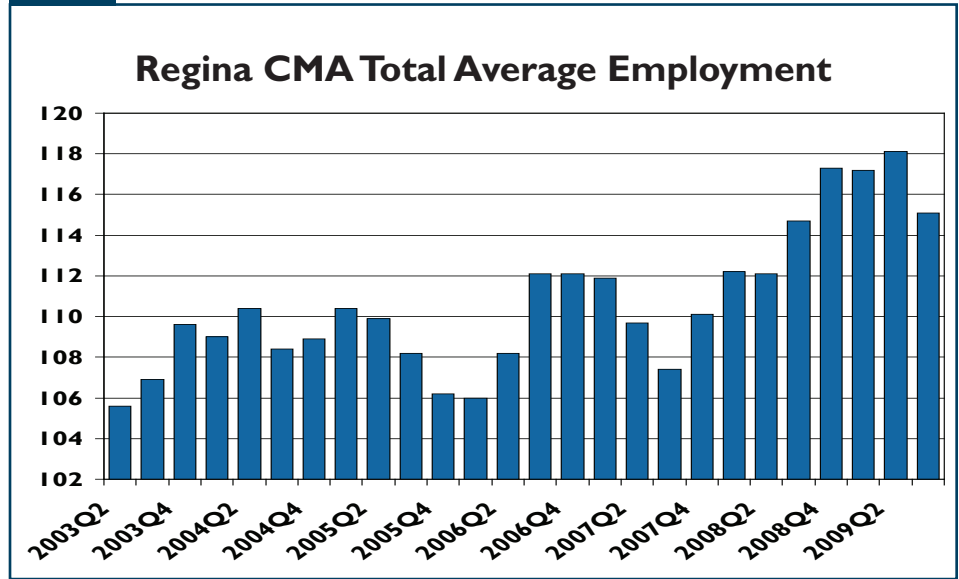

According to Statistics Canada industry specific information, year-to-date average weekly earnings have increased 5.5 per cent. The goods sector has seen gains of 1.7 per cent while the service sector has recorded a 6.3 per cent increase so far in 2009. The construction industry has seen a year-to-date increase in average weekly earnings of 10.5 per cent.

Residential permits down 32 per cent

There were 683 residential permits issued in the first eight months of the year, down 32 per cent from the 2008 January to August figure of 1,002 permits. Single-detached permits declined 44 per cent from the 2008 year-to-date number of 666 permits. Multiple year-to-date permits were down three per cent to 306 units.

The year-to-date combined value of residential and non-residential

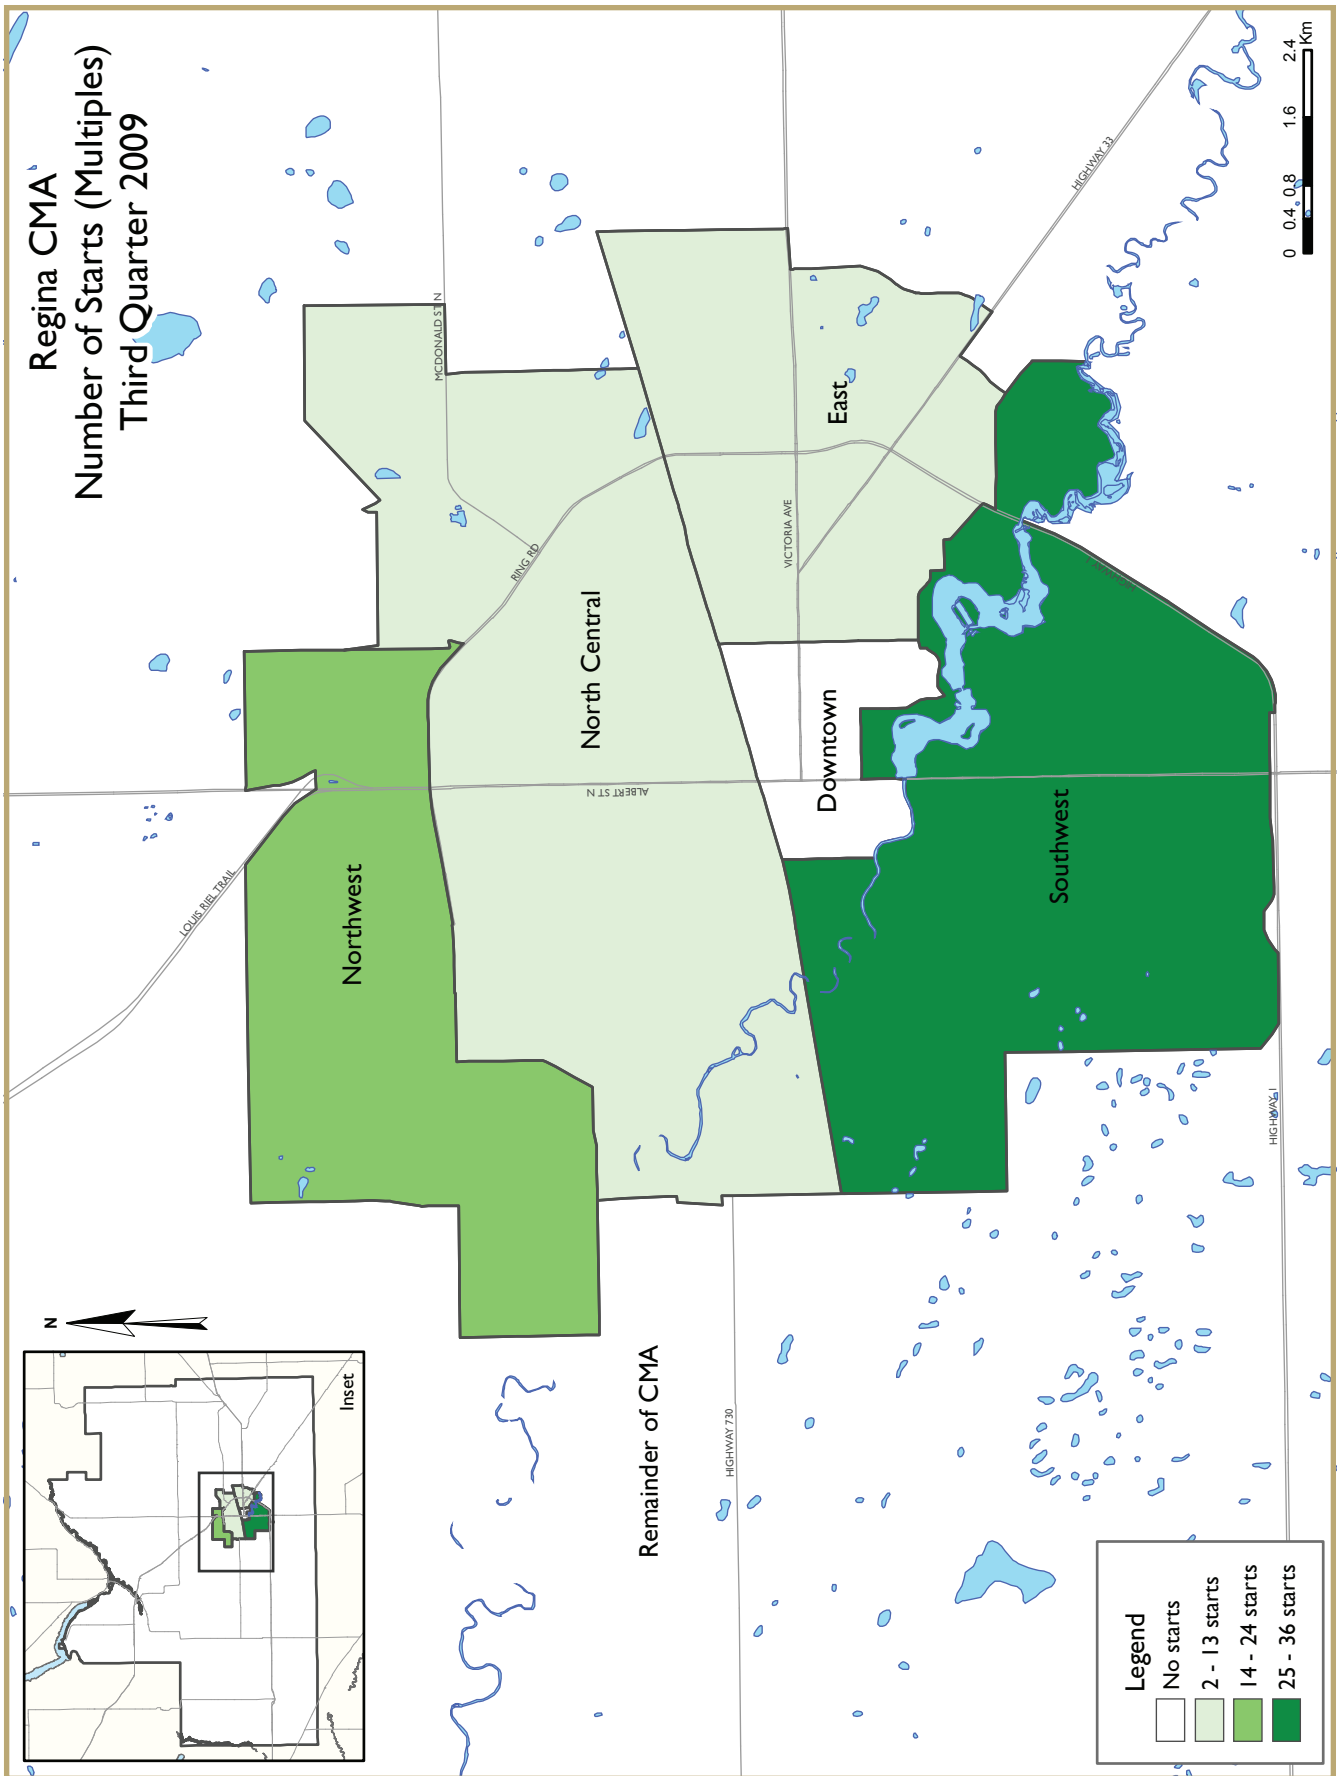

Figure 3

Source: Statistics Canada

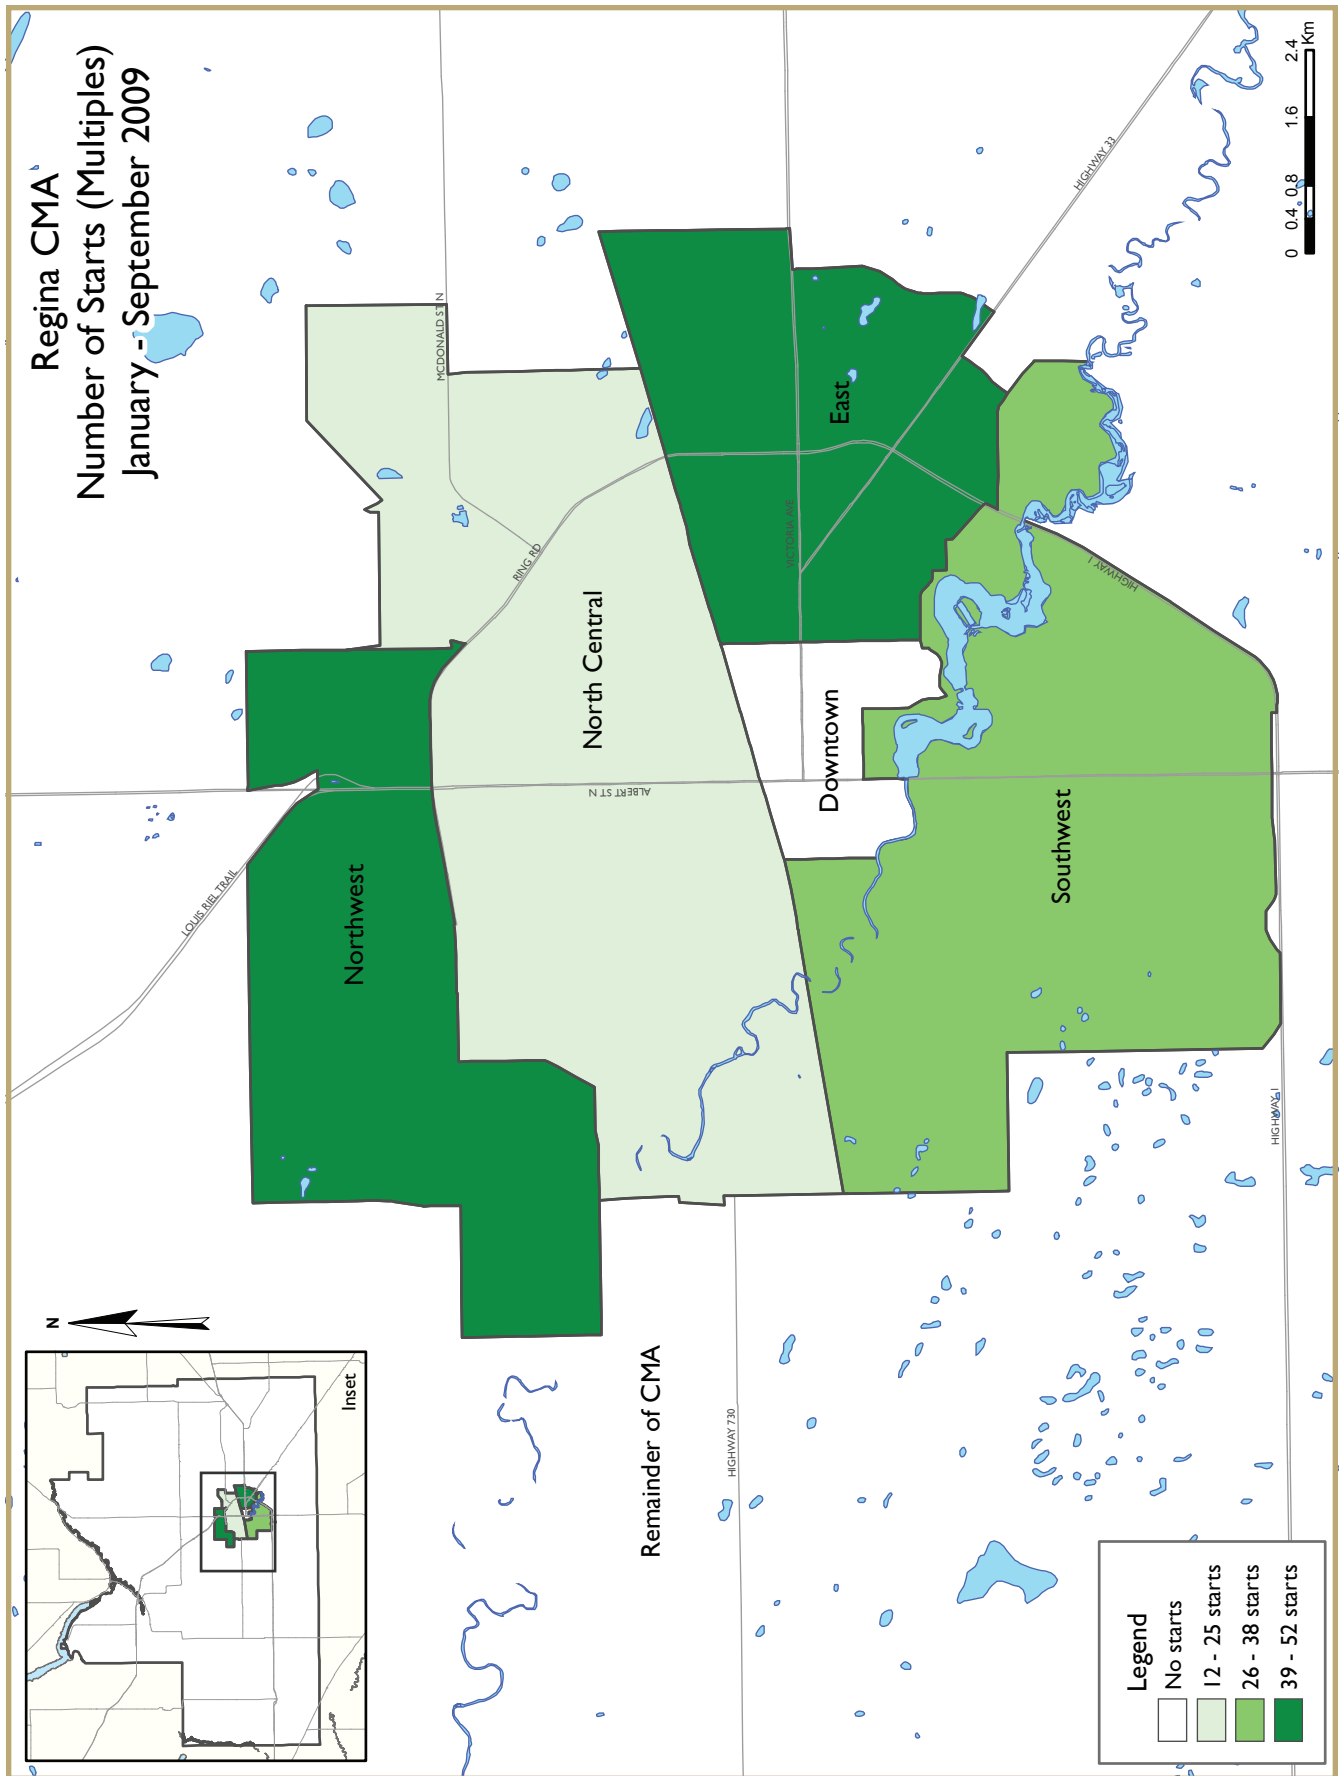

permits was up 12.8 per cent to the end of August. The dollar value of the permits issued in January to August this year exceeded last year's level in non-residential sectors but saw a decrease of just over 30 percent on the residential side. Institutional

and governmental permits saw dollar value declines compared to January to August 2008 figures. Industrial and commercial dollar permits issued have each more than doubled last year's performance at this time.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
