Date Released: Second Quarter 2009

Housing Market Posts Good First Quarter Results

Despite continued global economic uncertainty, a stable local economy, in-migration and a healthy labour market helped the St. John's area housing market post good first quarter results and marked a strong start to 2009. These factors sustained the demand for both new and existing homes in most submarkets within the region during

the January to March period. Although sales moderated, price growth continued, compared to the same period last year, while growth in residential construction activity was led by a surge in starts in both the single-detached and multiple housing segments. As expected, positive trends in demographic and economic fundamentals, paired with on-going momentum spurred by recent major project announcements, produced favourable first quarter housing market results.

Solid New Home Construction Activity

New home construction activity was solid during the January to March period, driven in large part by contracts carried over from 2008. In fact, both prices and housing starts experienced double-digit growth relative to the first quarter of 2008. From an industry perspective, builder capacity normalized during the first quarter, as the once tight labour market for skilled workers loosened. Recent layoffs in the Alberta oil patch alleviated much of the local labour issues, particularly during the last two months of the quarter. Both current and pent-up demand bolstered residential construction activity throughout the St. John's area during the threemonth period, creating unexpected double-digit growth for housing starts. Total housing starts increased 24 per cent to 214 units compared to 172 in the first quarter of 2008. Single-detached starts rose 18 per cent, with 166 units recorded versus 141 in the previous year's first quarter. The multiple starts segment jumped 55 per cent to 48 starts during the quarter compared to 31 a year ago. Three of the six submarkets experienced sizeable growth in housing starts during the January to March period. Torbay led the way, up 133 per cent, followed closely by St. John's City with a 96 per cent gain in starts and Mount Pearl with 42 per cent growth. On the downside, the remainder of the CMA submarket declined 33 per cent, followed by Conception Bay South (CBS), down 15 per cent and Paradise off by 8.5 per cent compared to a year ago.

New single-detached house prices

increased across all six submarkets. The average new single-detached house price for the St. John's CMA increased 21 per cent to a record \$259,990 compared to \$215,191 during the first quarter of 2008. Prices were highest in the submarket of St. John's City, where the average price of all new single-detached homes absorbed or sold was \$285,003, up 30 per cent over the first three months of 2008. CBS continued to post the lowest average new house price, with an average price of \$206,643 during the quarter, but was still up 11 per cent over 2008's first quarter price. Throughout the St. John's area, approximately 53 per cent of all newly constructed homes fell within the \$250,000+ range during the January to March period. The largest growth in market share occurred within this segment, which had only a 25 per cent share of the market a year ago. Overall, new home construction activity remained brisk during the first quarter of 2009.

Existing Homes Market Remained Cool

The resale market remained cool, but improved slightly as the first quarter

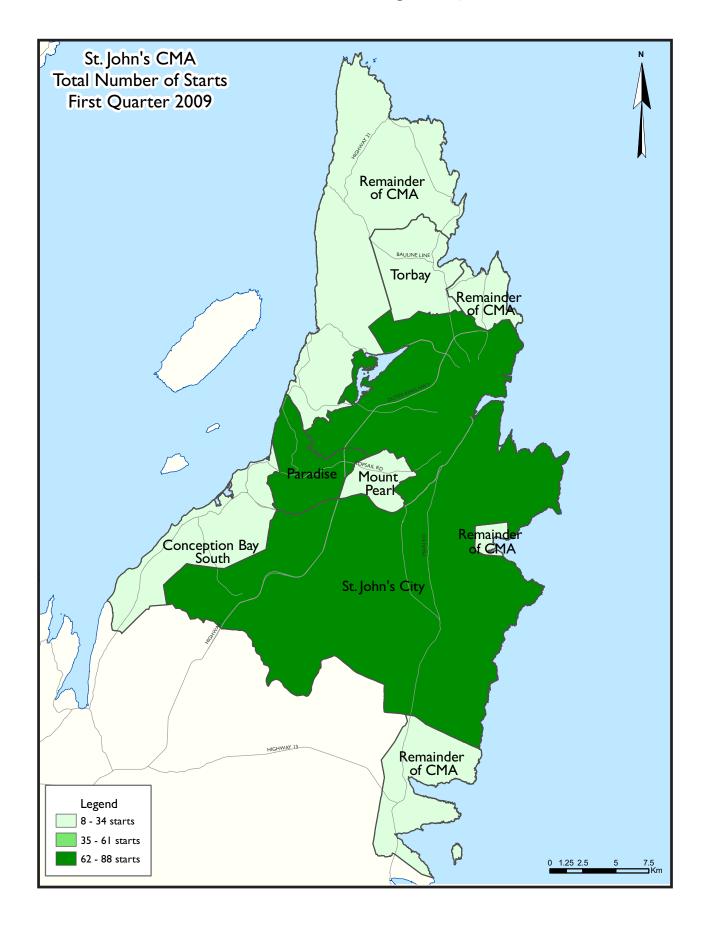

progressed. With seller's market conditions having weakened since the peak in the third quarter of 2008, the market rapidly tracked into balanced territory by the end of last year and continued to favour buyers throughout the first three months of 2009. Key market indicators positioned the market as seller's a little more than a year ago. That continued throughout most of 2008 until the fourth quarter - with softness occurring in the last two months of 2008. Much of last year's strong existing home market activity was driven by optimism created by the NL Government budget surplus, the Hebron oilfield announcement and formal agreement, and other major projects, such as the Vale Inco Hydromet in Long Harbour. In light of this, buyers speculated on property values rising significantly and they did - to the tune of about 20 per cent. Tight resale market conditions brought about by unprecedented demand and a significant reduction in inventory posed a challenge for buyers, but sellers were rewarded during this period. However, in terms of unit sales, the market cooled after the third quarter peak in 2008 and remained cool during the first quarter of 2009. There were very

few multiple offers or offers at or above asking price, inventory increased approximately 30 per cent and listings took longer to sell or never sold during the January to March period. Prices, however, remained quite stable. There were 1,519 new residential listings during the first quarter versus 1,568 during the same period last year. With market conditions cooling, active listings began to increase and averaged 1,500 versus 1,150 during the first quarter of 2008, when sales were higher. Having peaked at 34 per cent in 2008 during the height of the seller's market, the unadjusted sales-to-active listings ratio dropped to 12.8 per cent in January of this year, then improved to 13.0 and 15.6 per cent in February and March, respectively. During the first quarter, the sales-to-active listings ratio averaged 13.8 per cent compared to 20 per cent during the same period in 2008, signalling that the recent seller's market had certainly come to an end.

period, the average MLS® residential price remained quite stable at \$195,517 compared to \$156,953 during the first quarter of 2008, a difference of more than \$38,500. The relative strength in the average MLS® residential price was driven by both new home and existing home closings from the third and fourth quarters of 2008, as well as positive economic and demographic fundamentals within the St. John's region throughout the January to March period.

MLS® Residential Sales Down; Prices Up in First Quarter

Despite a cooling of sales within the existing homes market during the first quarter, the average price reached another record level on a quarterly basis. The number of MLS® sales decreased 12.6 per cent over last year's first quarter, with 623 sales compared to 2008's record first quarter sales of 713 units. However, the average MLS® residential house price was 25 per cent higher than it was a year ago, maintaining a growth trend that began in mid-2007. With increased inventory levels and fewer buyers during the January to March

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "**start**", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "**completion**", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada's 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
