New Home Market

Alberta drags down
Prairie housing starts
in '08

Housing starts across the Prairies fell 31 per cent in 2008 to 41,529 units, the lowest level in seven years. A sharp pullback in single-detached construction in Alberta led to last year's decline. The 22,924 single-detached housing units started last

year were 36 per cent off the pace set one year prior. Work started on 18,605 multi-family units, a 23 per cent drop from a year earlier.

While Prairie housing starts recorded a decline in 2008, Saskatchewan home builders enjoyed the strongest performance in 25 years. Last year, a total of 6,828 housing units began construction, a 14 per cent gain over 2007. Fuelled by Saskatchewan's strong economy and buoyant net migration, single-de-

Figure 2

tached starts reached 4,518 units, a 12.5 per cent gain over 2007 levels. Demand from first-time buyers and investors drove multiple starts to 2,310 units last year, a 16 per cent rise from 2007 and a 25-year high.

Saskatchewan's rural areas led the charge with a 78 per cent gain in housing starts last year, countering a three per cent drop within urban areas. A number of smaller markets recorded sharp increases in housing starts in 2008, the most notably being Moose Jaw and the Battlefords. Census Metropolitan Areas (CMAs) recorded slight declines. The 2,319 housing units started in Saskatoon were 2.6 per cent below the pace set in 2007. Saskatoon's weakness was due to a 13 per cent drop in single-detached starts. In Regina, a 26 per cent decrease in multi-family starts outpaced a 13 per cent gain in single-detached construction, pulling total starts to 1,375 units, 1.6 per cent lower than 2007.

Manitoba home builders enjoyed a consistent performance in 2008, with starts varying only a few hundred units from 2007's 20-year high.

Provincial housing starts totalled 5,537 units, the second best in 21 years and only four per cent below 2007 level. In Manitoba's multi-family sector, builders started work on 1,847 units last year, only 34 units shy of the two-decade high of 1,881 units in 2007. Despite the moderation, multi-family construction in 2008 was more than double the 10-year average of 912 units. Single-detached starts in Manitoba reached 3,690 units last year, 4.3 per cent behind 2007's pace but the third highest total since 1988.

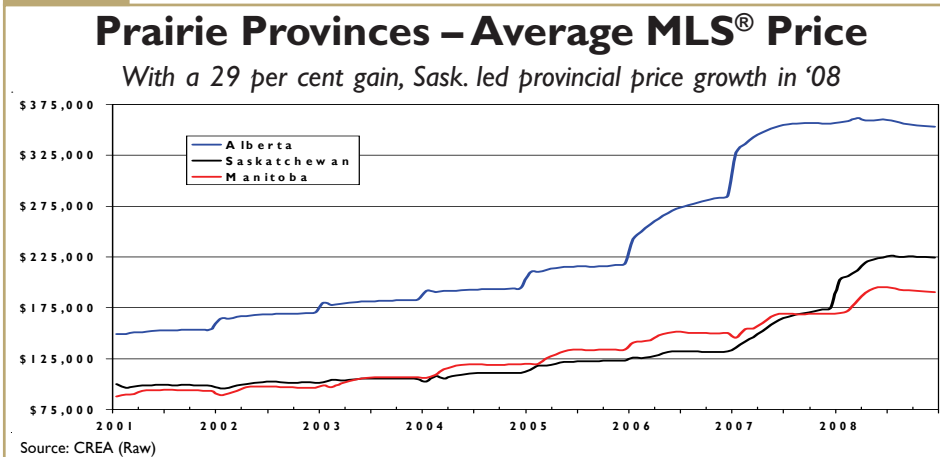

In the Winnipeg CMA, 3,009 housing units were started in 2008, the second best performance in 20 years but still 11 per cent below 2007 activity. At 1,930 units last year, single-detached starts established a 19-year high. This three per cent gain, however, did not counter the 28 per cent reduction in multi-family activity. Rather than boost new projects, builders focused more on completing multiple units and selling their inventory following 2007's heightened activity. The 1,079 multiple units started in 2008 were still the second best level since 1988.

In 2008, construction improved in a number of centres across the province. Overall, 14 per cent of Manitoba's starts in 2008 took place in census agglomerations (CAs) outside of Winnipeg, much higher than the eight per cent share in 2007. Brandon was among the most notable contributors, with a 77 per cent surge in housing starts last year.

While housing starts moved higher in Saskatchewan and stayed relatively consistent in Manitoba, Alberta's starts slipped to an 8-year low in 2008. Housing starts in Alberta moved from 48,336 units in 2007 to 29,164 units in 2008, a 40 per cent decline. Provincial single-detached starts fell by 48 per cent last year to 14,716 units, the sharpest decline on record. Prospective homebuyers became more cautious in 2008 due to the hefty price growth of previous years and equity erosion resulting from falling stock and existing home prices. Builders also cut production in response to excess inventories and heightened listings in the competing resale market. Though multi-family starts in Alberta dropped by 28.6 per cent last year to 14,448 units, they were only slightly below the five-year average.

Among Alberta's larger urban centres, the Red Deer CA experienced the sharpest decline in housing starts in 2008, falling 63 per cent below 2007 activity. Edmonton reported a 56 per cent drop in total starts last year, the second biggest decline in the province. Edmonton's 66 per cent decrease in single-detached starts overshadowed a 44 per cent dip in multi-family units. In 2008, multi-family construction in Calgary reached a 27-year high. However,

Figure 3

Calgary's 23 per cent advance in multi-family units failed to offset the 44 per cent drop in single-detached starts. At 11,438 units in 2008, total starts in Calgary were 15 per cent below 2007's level, the shallowest decline in the province. Starts weakened across all urban centres in the province last year.

Resale Market

Resale transactions cooled in '08

The escalation in prices over the previous two years and deterioration of economic conditions hampered MLS® sales across the Prairies in 2008. Last year, residential sales across the Prairies slid 18 per cent to 80,127 units, the weakest performance since 2004. The decrease mostly occurred in Alberta and Saskatchewan. In Alberta, lower demand coupled with excess supply pushed MLS® sales to 56,399 units last year, well under the 71,430 transactions seen in 2007. Calgary's 28 per cent drop in transactions was the sharpest among urban areas.

After a booming start to 2008, it appeared that MLS® sales in Saskatchewan would set a new record in 2008. However, as the months progressed, it became evident that buyers were resisting the price escalation that began in 2007. Sales by the end of 2008 slipped to 10,203 units, down from the record of 12,054 units in 2007. Despite Saskatchewan's decline, 2008 was the second best year on record for sales. In Manitoba, 13,525 resale homes changed hands last year, three per cent lower than 2007 levels.

In Saskatchewan, the average MLS® price jumped 29 per cent to \$224,586 in 2008, thanks to strong gains during the first half of the year. This comes after a record 32 per cent gain in 2007. Last year, Manitoba recorded its sixth consecutive year of double-digit price gains, mainly the result of listings shortages seen in early 2008. Last year, the average resale price in Manitoba reached \$190,296, up 12.5 per cent from 2007. Due to elevated listings and weaker sales, Alberta's average resale price slipped one per cent to \$352,856 in 2008, the first drop in 13 years.

Economy

Employment and net migration still strong in '08

Across the Prairie Provinces, employment growth helped to buffer the region from the economic slowdown impacting much of North America. While exceptional in the previous two years, employment growth in Alberta fell back to 2.8 per

Figure 4

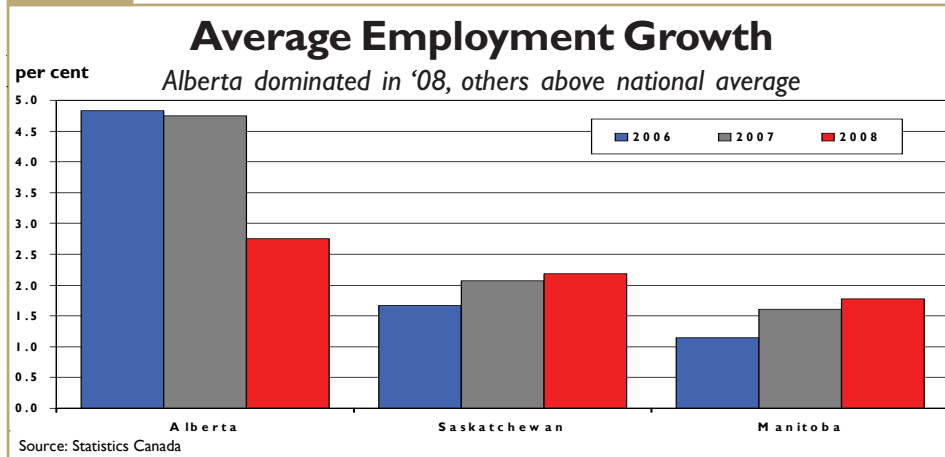

Figure 5

cent in 2008. This was still highest among all provinces and represented more than 50,000 new jobs. In Saskatchewan, the flood of people moving in from other provinces and abroad boosted employment. More than 10,000 new jobs were created last year, a 2.2 per cent rise and the second strongest gain since 1986. At 1.7 per cent, Manitoba's job growth was the lowest in the Prairies but strongest in six years.

In most parts of the Prairies, net migration remained on the rise in 2008 thanks to employment opportunities. In net terms, nearly 49,000 people moved to Alberta during the first three quarters of last year, a 36 per cent surge over the previous year. International immigrants and non-permanent residents were the main contributors. To the end of September 2008, nearly 9,200 more people moved to Saskatchewan than

left, a two per cent gain over the previous year. Half of the gains came from inter-provincial migrants. Net migration moderated in Manitoba. To the end of September 2008, a bit more than 6,100 people moved to Manitoba, an 8.6 per cent drop from 2007. Losses to other provinces and weaker gains from international source were the main contributors.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses, and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A **“dwelling unit”**, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A **“start”**, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units **“under construction”** as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A **“completion”**, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term **“absorbed”** means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
