Date Released: April 2009

Slow First Quarter for Victoria's Construction Industry

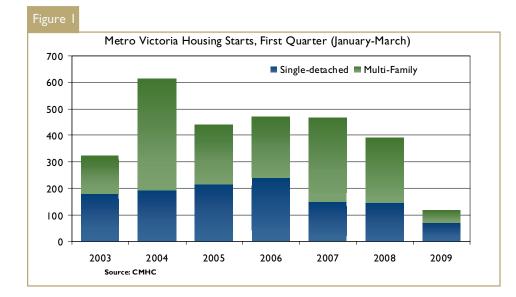

First quarter housing starts in Metro Victoria were 70 per cent below the level recorded in the first quarter of 2008. The downtrend in new construction activity has been felt across dwelling types, as both single-detached and multifamily starts moved lower.

Economic uncertainty and a slowing labour market have had a

negative impact on homeownership demand. Easing demand has translated into less spillover of demand from the resale market to the new home market. Weaker resale demand and a well-supplied market (both new homes and resale listings) have signaled to local builders and developers to slow residential

construction until economic and job conditions improve and demand is more in line with supply.

With Metro Victoria housing starts moderating in 2008, the number of units under construction has steadily edged down since July of last year. With a number of multifamily projects expected to wrap up construction this spring and a continued lull in residential construction projected, this number will continue to fall. At the end of March, there were 2,611 units under construction in Metro Victoria, with apartment condominiums accounting for 72 per cent.

Completions were down 22 per cent in the first quarter of 2009 (relative to the first quarter of 2008), but are expected to increase in the second quarter as construction on these apartment condominium projects concludes. The first quarter of 2009 marked the seventh consecutive quarter in which the number of absorbed new homes was surpassed by the number of completions (i.e. supply outpaced demand).

As first quarter completions outpaced absorptions, this added to the inventory of unsold new homes in Metro Victoria. In the span of a year, the inventory of completed but unsold new homes (471 units) increased 78 per cent. With the previously specified multi-family projects nearing completion, and demand for condominiums projected to continue trending down, the supply of new apartment condominiums will continue to rise through 2009.

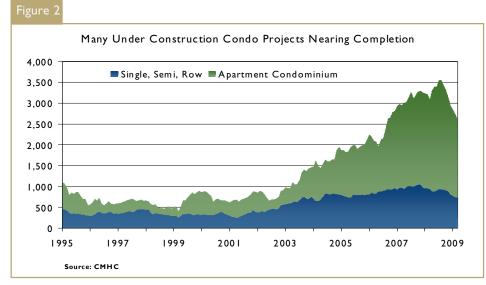

The inventory of unsold singledetached new homes was 120 units at the end of March, more than double the level last March. With added supply and fewer absorptions, the average price of a new house in Metro Victoria has started to adjust. Compared to the first quarter of 2008, the average price has fallen five per cent. Single family home prices range between \$444,000 in Sooke and \$1,475,000 in Oak Bay. The average price across all municipalities was \$655,000. This reflects the fact that nearly three quarters of all singledetached home sales occurred in West Shore markets, where prices are more modest compared to the Core and Peninsula markets.

Buyers' Market Presents Opportunities for First-Time Homebuyers

Resale activity continued to moderate as demand has been tempered by a weakened local labour market. During the first quarter of 2009, there were 1,207 resale transactions and 2,934 new MLS® listings in Greater Victoria – both well below the levels attained over the same period last year. However the number of homes for sale remained high, providing plenty of choice for homebuyers.

For each of the three major market segments (single-detached, attached, and apartment condominiums), first quarter sales and new listings fell below last year's levels. Also noteworthy is that demand declined in excess of supply across all market segments.

The sales-to-new listings ratio, a good barometer of market conditions, indicates that the local resale market is still firmly in buyers' territory. The average resale price continued to adjust to these market conditions, falling 12 per cent in the first quarter (relative to the first quarter of 2008).

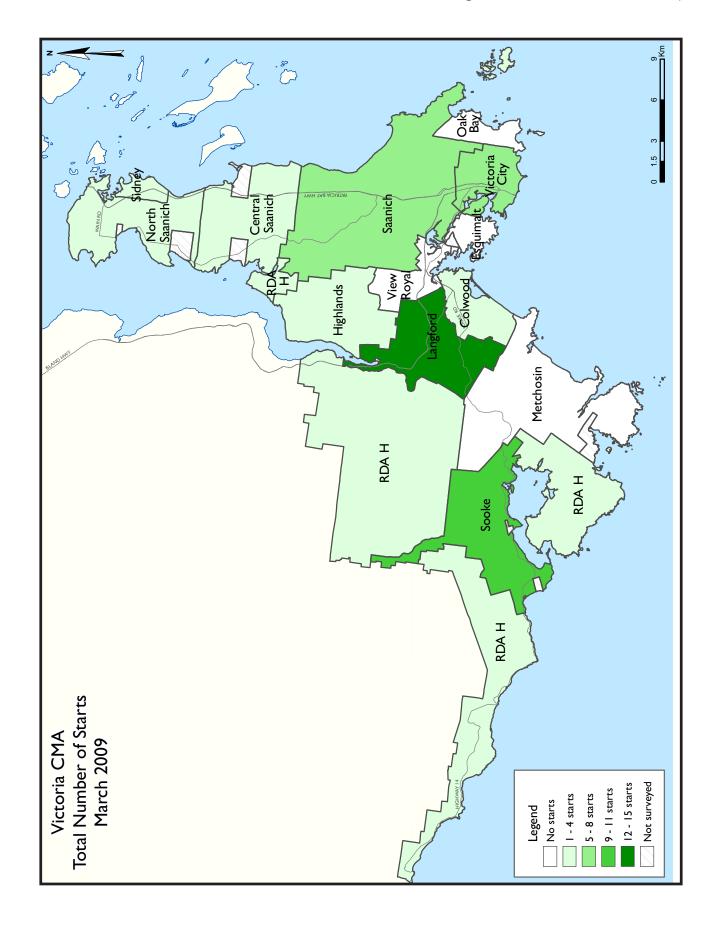

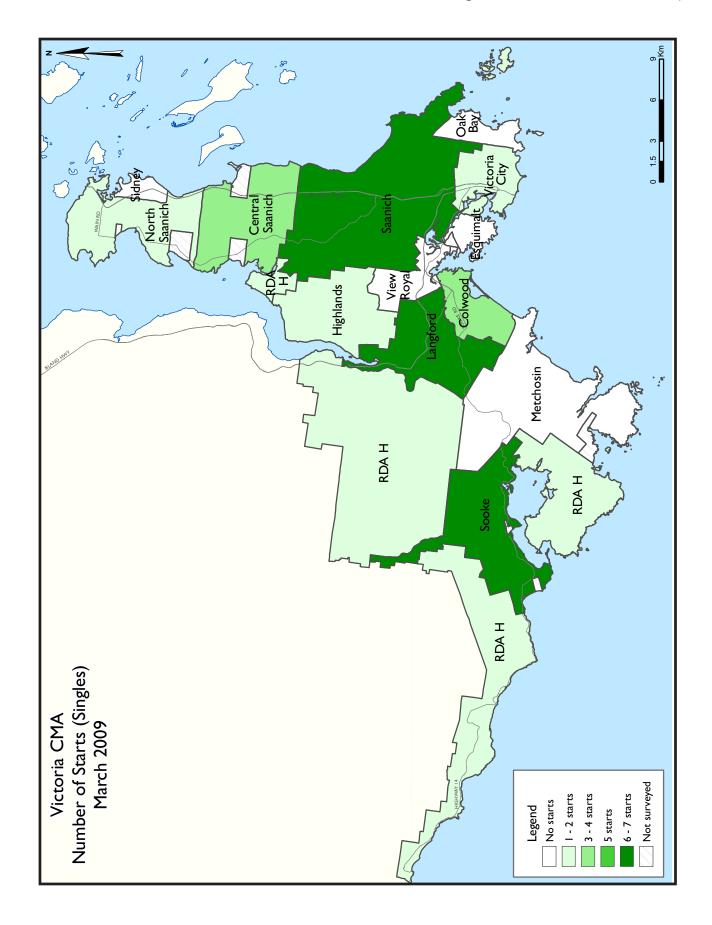

The amount of price adjustment varied across markets, with singledetached prices falling eight per cent, compared to 15 per cent for apartment condominiums. The larger adjustment in apartment condominium prices suggests that the added supply which will enter the market this spring has already started to influence prices. There are currently nearly 200 active MLS® listings of apartment condominiums with completion dates of 2009 or later, and this figure is likely to increase in the coming months.

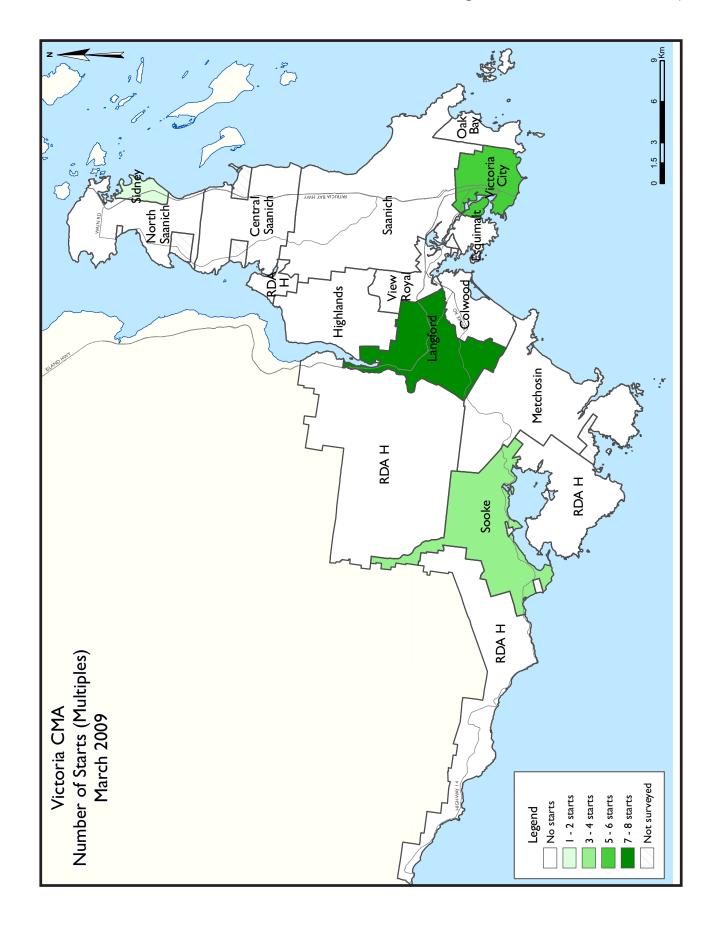

Declining prices, an ample supply and selection of homes, and record-low mortgage rates have combined to provide first-time homebuyers with an opportune time to enter the local housing market.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "**completion**", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada's 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.

For more information, visit our website at www.cmhc.ca

You can also reach us by phone at 1-800-668-2642 or by fax at 1-800-245-9274. Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is available for free on CMHC's website. You can view, print, download or subscribe to future editions and get market information e-mailed automatically to you the same day it is released. It's quick and convenient! Go to www.cmhc.ca/housingmarketinformation
