Canada Mortgage and Housing Corporation

Date Released: First Quarter 2009

New Housing Market

In the fourth quarter of 2008, new housing starts in the Peterborough Census Metropolitan Area (CMA) registered a decline in activity from the same quarter a year earlier. In fact, during the months of October to December of 2008, the total home starts reached 122 units in the fourth quarter of 2008 down

from 240 in the same period in 2007.

Single-detached homes, which dominate new construction in the Peterborough CMA, fell by 13 per cent while row and apartment starts combined recorded a hefty drop of 73 per cent. Row and apartment starts in Peterborough can vary sharply during the year and even from year to year.

Total residential starts in Peterborough CMA ended the year at 428 units, down 21 per cent from 540 units registered last year.

The City of Peterborough registered a major drop in last quarter of 2008 when compared to the same period of 2007; Starts declined by 59 per cent year from the fourth quarter of 2007. The same trend was observed in Smith-Ennismore Lakefield Township where total starts decreased from 23 units to 15. All were single-detached homes. The opposite occurred in Otonabee-South Monaghan Township, where home starts went up from 5 units to 11. For the year as a whole, all regions in Peterborough CMA showed a decline in 2008. New homes in the City of Peterborough, which represents more than 70 per cent of total construction, went down by 20 per cent.

Despite the decline in starts, completions showed only a slight decrease with 109 units completed in the fourth quarter of 2008 compared to 112 in the same period last year. Inventories of completed but unsold units fell to only 9 units at the end of 2008 compared to 32 units in the fourth quarter of 2007. Total absorbed units were 122 units in the fourth quarter in 2008, similar number recorded in the same period in 2007.

The average price for a new single-detached home increased by slightly less than one per cent. The share of new single-detached homes valued at more than \$ 300,000 in total new home construction increased from 20 per cent in 2007 to 36 per cent in 2008 while the share of those

valued at less than \$250,000 decreased.

Resale Market

Existing homes sales in Peterborough CMA decelerated in 2008. Sales declined by 13 per cent to 2,506 from the 2,880 units sold in 2007. At the same time, new listings increased by four per cent to 5,264. In last quarter of 2008, existing home sales showed a significant decline of 19 per cent. In all, 403 properties changed hands, compared to 499 during the same period of the previous year.

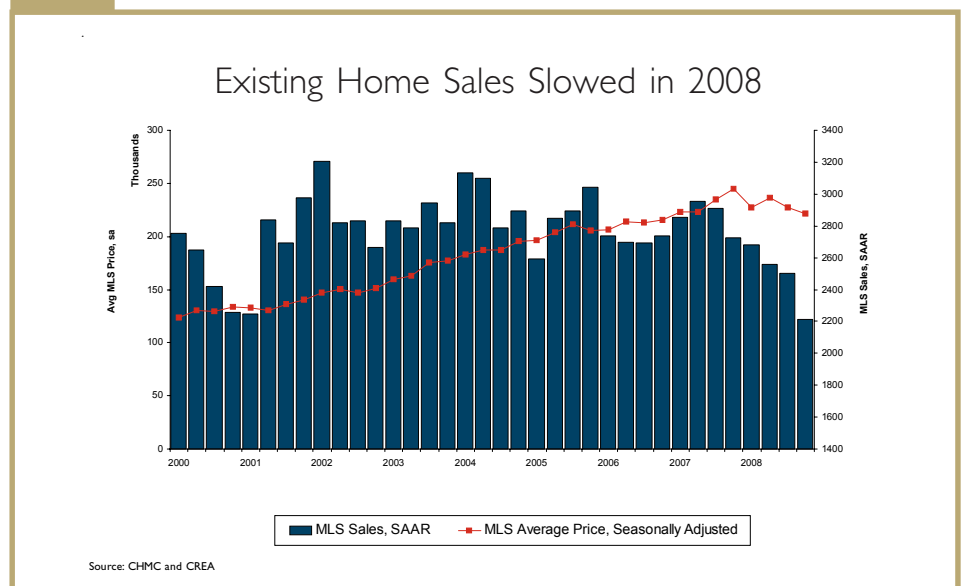

After many years in which market conditions favoured sellers, the resale market in Peterborough became more balanced in 2008. A balanced market indicates relatively equal bargaining power between buyers and sellers. The sales-to-new listings, an indicator of future price

growth, trended down throughout most of 2008 to about 44 per cent in the last quarter. Indeed, the average price of an existing home in Peterborough CMA was virtually flat, \$230,700 in 2008 compared with the \$231,600 recorded in 2007. The price for a resale home showed a relatively large drop in the fourth quarter of 2008, down by about nine per cent from the previous year.

Peterborough Employment

Stable and lucrative employment is a determining factor when deciding to purchase a home. Employment in Peterborough ended the year at approximately 56,580, a slight decrease from 2007. In the fourth quarter of 2008 employment reached approximately 55,500 employees, a decrease of about

Figure 2

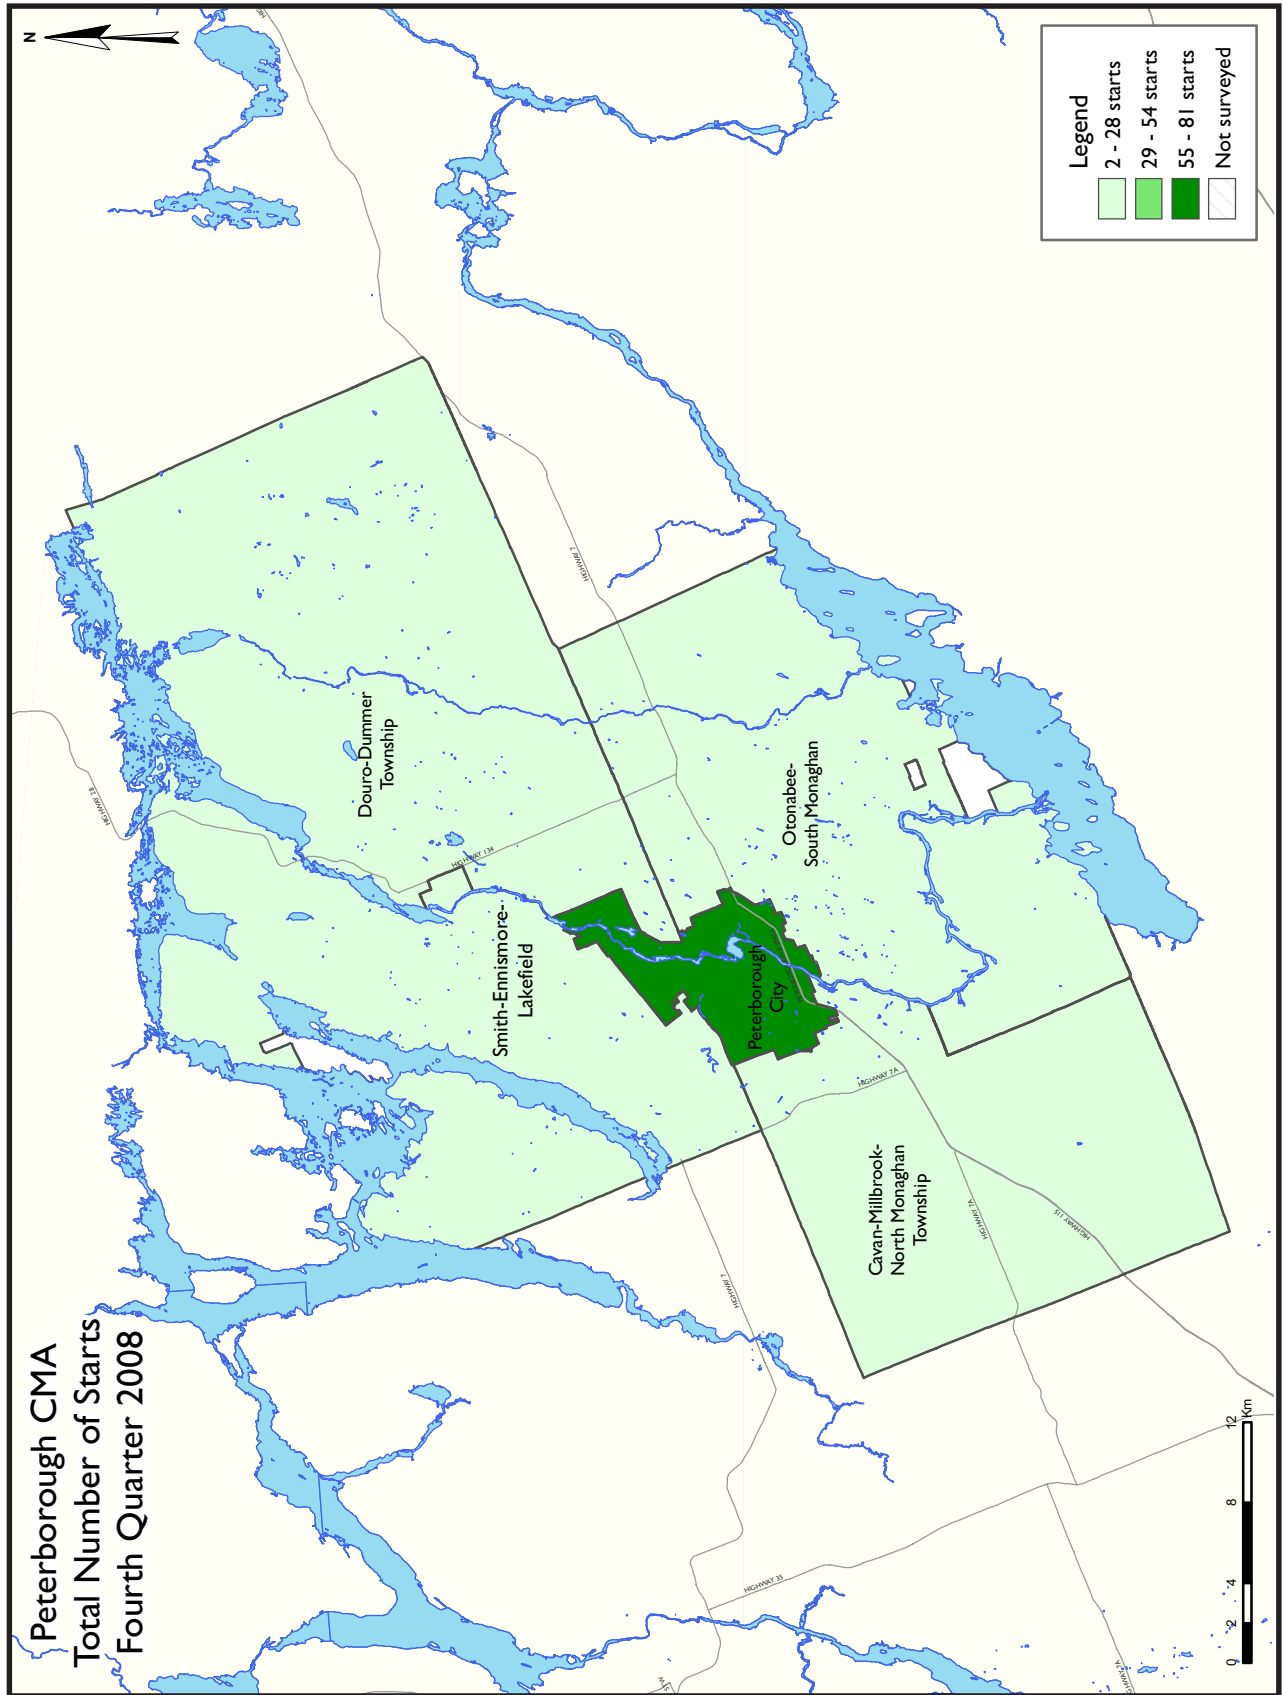

three per cent from the same period the previous year.

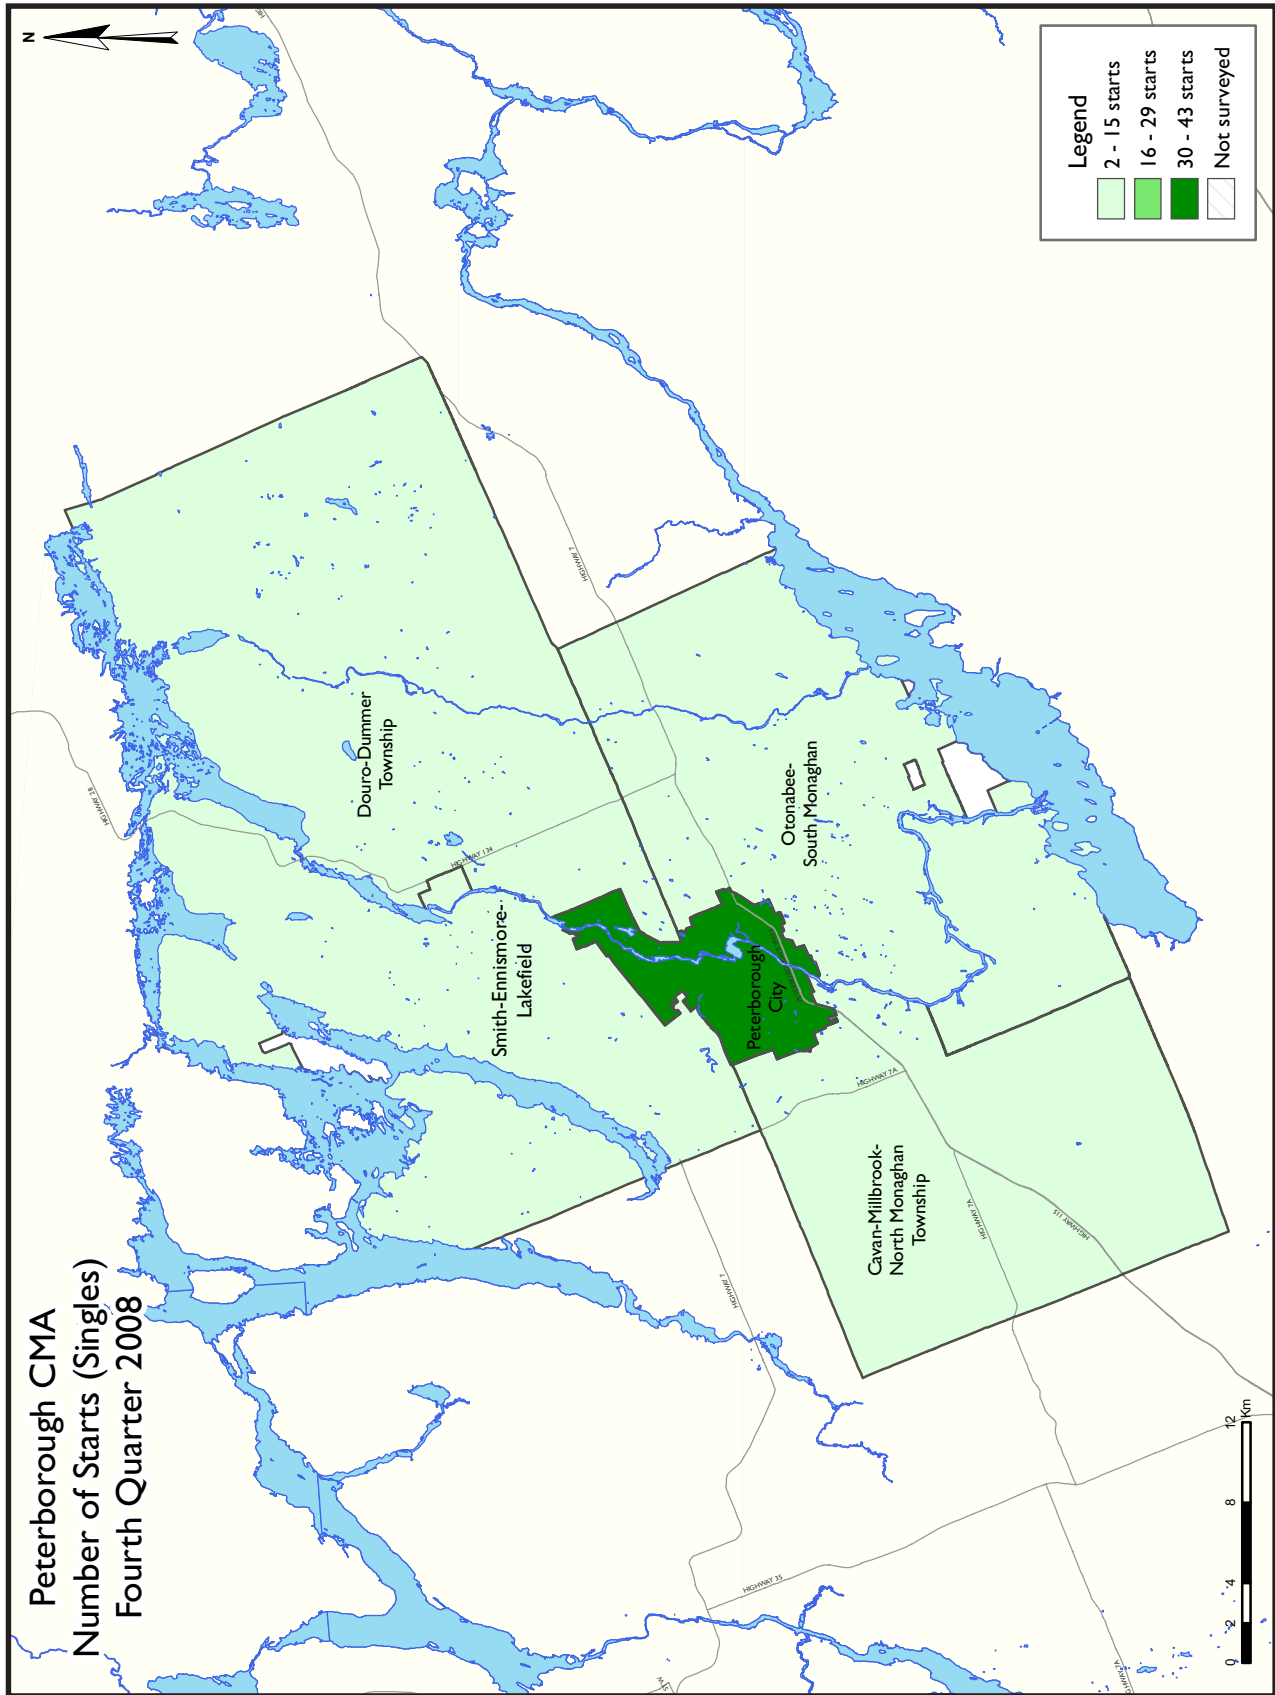

By sector share, trade and other services attracted more employees in 2008, offsetting the shedding of jobs in other sectors, such as transportation, manufacturing and financial services.

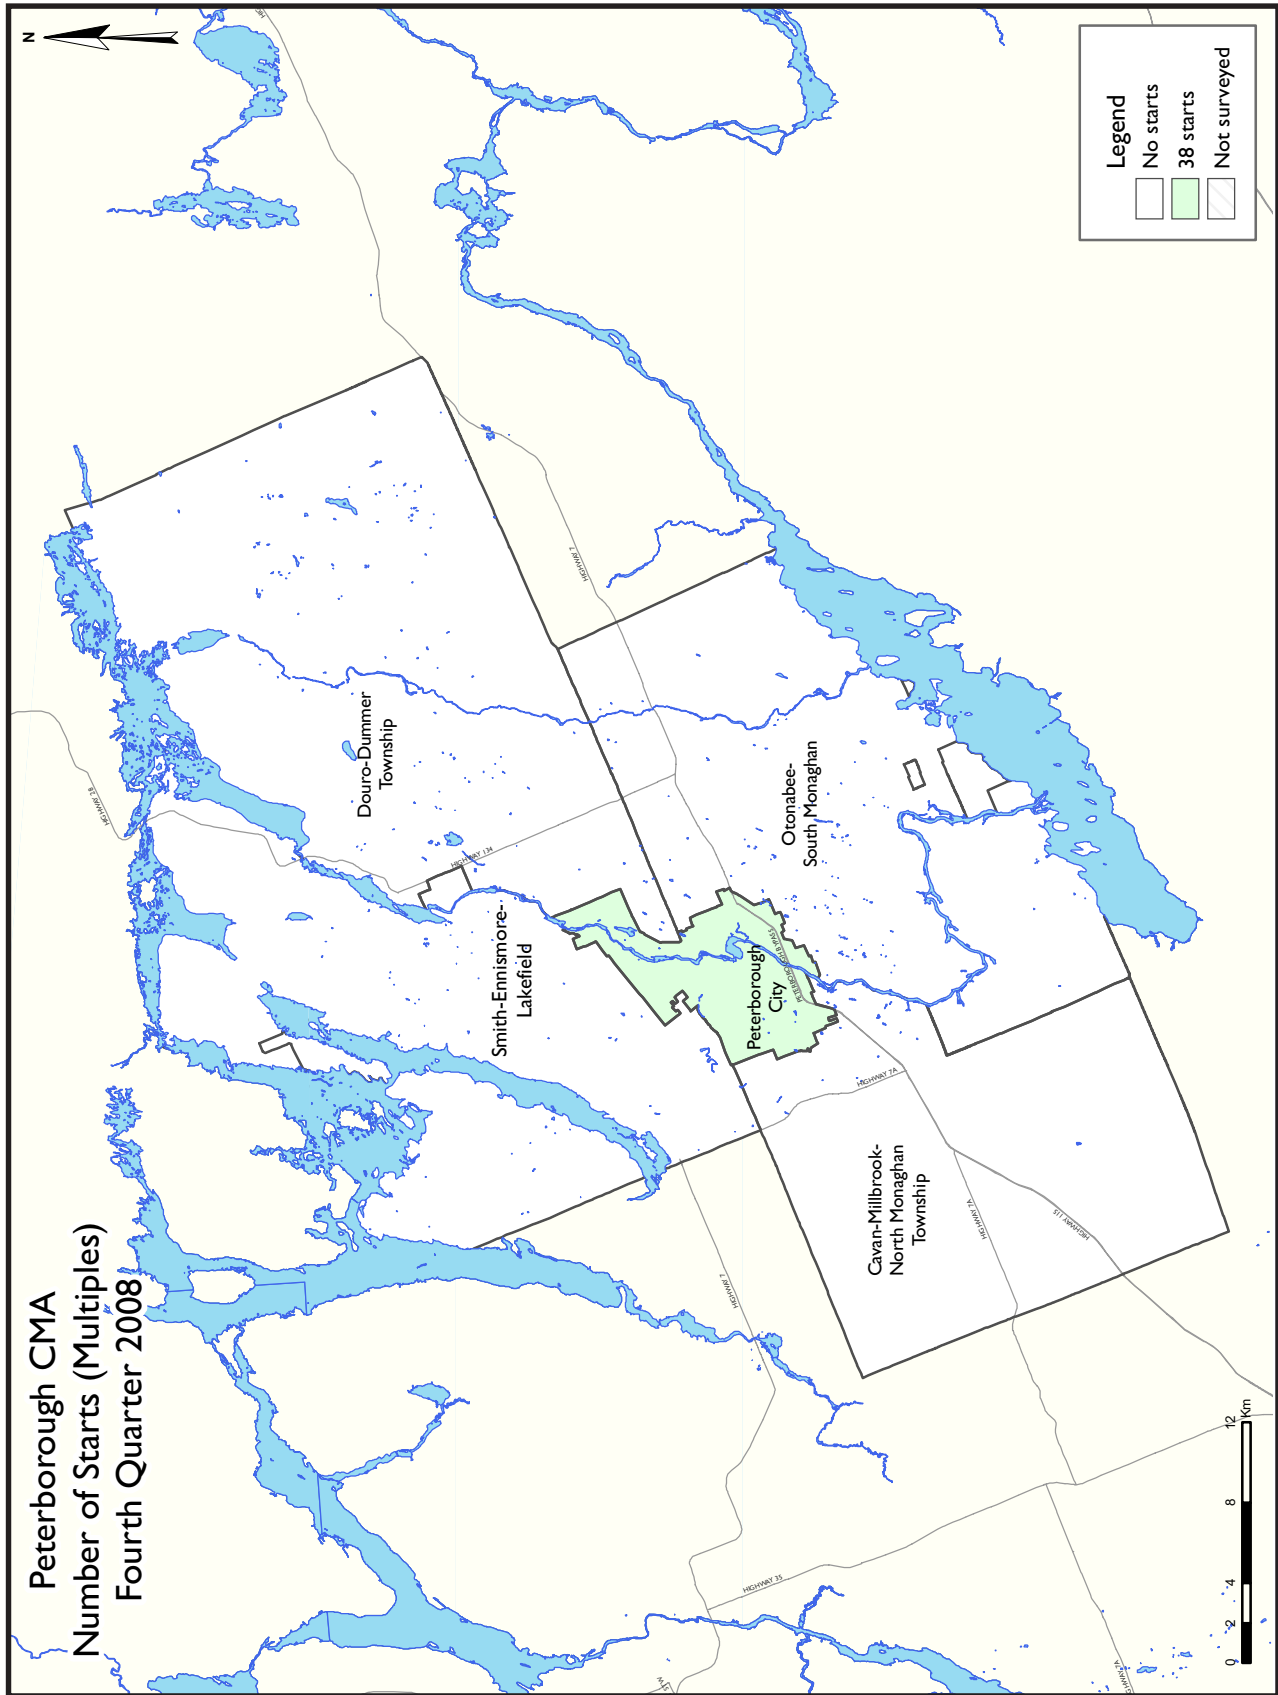

The number of middle-aged employees showed a decline of 12 per cent in 2008 from the previous year while employment of people in other age groups increased with different rates. Young employees gained 11 per cent more full time jobs in 2008 while employees between the ages of 25 and 44 years old lost 16 per cent of their full time positions. With respect to part time employment, employment of people in age groups 25-44 and 45-64 increased by 14 and 11 per cent respectively while employment in the younger age group decreased by six per cent. Overall in 2008, full time employment decreased by two percent while part time employment increased by six per cent.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.

For more information, visit our website at www.cmhc.ca

You can also reach us by phone at 1-800-668-2642 or by fax at 1-800-245-9274.
Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.
