Canada Mortgage and Housing Corporation

Date Released: Spring 2009

New Homes Market

Market Continues to Ease

Total starts will decrease from the approximately 1,400 total starts last year. This year total starts will come in at just over 1,000, and remain unchanged next year.

Housing starts are expected to decrease not only given the weaker economic landscape, but also due to of decreased household formation.

Single-detached homes will continue to represent a majority of total new construction this year and next, but other housing types such as apartments will take up a bigger portion of the total new construction pie. This year approximately 640 new single-detached homes will be started, making up just over 60 per cent of all new construction with a similar figure and percentage ex-

pected in 2010. New construction other than single-detached homes will see gradual increases this year and next each year, moving closer to 40 per cent of all new construction. In terms of total numbers, apartments will make up the majority of construction other than singles with just over 300 units this year and virtually the same number next year.

The shift towards apartments away from traditional single-detached houses can be explained as follows: demographics, the economy, and, to some extent, legislation.

With a young population, first time buyers are a significant part of the new market in Barrie. Condominiums, both apartments and row-houses, are an affordable entry point into homeownership and given the slowing economy and rising uncertainty, these new homebuyers with limited equity are increasing the trend towards new housing that is not single-detached homes. Also, with legislation in place that stipulates increased new construction in a metropolitan region's urban core, the decision to develop higher density housing becomes a frequently preferred option.

Finally, another reason for decreased new single-detached construction is the relatively high inventories of newly constructed but unsold single-detached homes. Some new single-detached homes which have not sold are being rented, raising the proportion of singles in the rental market above what it is in many other cities. However, the number

of new single-detached homes available for sale remains relatively high and is decreasing only at a gradual rate.

With a weaker economy and overall less demand for new housing, especially at the pricier end of the market, the average price of a new single-detached home will begin to decline. This year, the average new single-detached home price is expected to come in at just over \$319,000, a decrease of about three per cent from 2008. A similar decrease is expected next year.

Existing Homes Market

Resale Market Feeling the Crunch

Existing home sales are expected to continue their double-digit contrac-

tion from last year and settle at just above 3,400 sales this year. Next year, with an improving economy, sales will still remain under 4,000 but increase slightly from this year's final tally. The robust sales for a number of recent years was driven by strong economic fundamentals and has given way to slower sales activity as the economy has begun to lose some of this strength. More people that otherwise would be looking to purchase are choosing to wait. As the economy begins to improve, especially after 2010, existing home sales will begin to gradually increase as people take advantage of improved affordability due to low mortgage rates and lower prices.

As Figure 3 shows, the gap between the actual average household income¹ in Barrie and the income required² for home ownership had been shrinking for several years. With better fundamentals in 2009 and 2010 (i.e., lower

Figure 3

Average prices are expected to decrease over the next two years by three to five per cent. This year prices will decrease at a rate which is close to the Ontario average and will settle at just over \$250,000. Next year the slowdown in prices should continue but prices should settle closer to current year levels.

Economy

Economy Downshifts

The Barrie labour force is expected to decrease by just under four per cent this year, but will show a gradual recovery next year. Domestic and international forces will cause the local labour market to continue to lose some steam, but next year a slight pick-up is expected as government stimulus begins to take hold.

mortgage rates, lower home prices) the gap between actual and required income will widen, making homeownership once again an attractive option for some families.

New listings will decrease from the record set last year. Some potential sellers have taken their homes off the market since the current economic adjustment is making it more difficult to sell at preferred prices. New listings will decrease by 12 per cent this year and are expected to move up slightly by about two per cent next year.

The sales-to-new-listings ratio (SNLR) reached 63 per cent in 2007, indicating the market clearly favoured sellers. Since then, the SNLR has begun to descend and indicate that the market balance. With sales dropping off more than new listings, the SNLR will come in this year at just over 47 per cent. Next year, despite the pick-up to both variables given an improving

economy, the SNLR will remain very close to this year's ratio. With the SNLR entrenched firmly in balanced market territory, average existing home prices will continue to lose some of the previously gained momentum over this year and next.

Figure 4

Employment is expected to decrease by about six per cent from 2008, with a slight recovery next year. Despite the creation of some part-time jobs, the larger losses to full-time employment will keep the employed sector at subdued levels relative to recent history. Employment is down in both the goods-producing sector and the services-sector. Employment was down initially in the goods-producing sector due to the impact on exports of the strong Canadian dollar as well as lower external demand. This led to lower consumer spending generally, which in turn affected demand for services negatively. However, greater public spending on infrastructure will result in employment gains in the non-residential construction sector.

Both employment and the labour force will be losing some strength, but employment will feel more of the pinch. Consequently, unemployment will see an increase this year and end the year at 8.5 per cent. Next year, unemployment will stay elevated as the labour force begins to rebound much quicker than employment.

With more people looking for fewer jobs, employers are able to attract workers without offering higher

wages. Average weekly earnings across all industries were down about one per cent in 2008. They are expected to see more deflation in 2009, but turn up slightly next year.

Net migration to the region will see a pronounced decline this year with another smaller decline expected in 2010. Given the weakness in the labour market, the region's appeal has declined to some extent and migration is unlikely to pick up before the economy begins to improve.

Mortgage Rates

Mortgage rates are expected to be relatively stable throughout 2009, remaining within 25-75 basis points of their current levels. Posted mortgage rates will increase very gradually during the course of 2010, reflecting a rise in government of Canada bond yields. For 2010, the one year posted mortgage rate will be in the 4.75-6.00 per cent range, while three and five year posted mortgage rates are forecast to be in the 5.00-6.75 per cent range.
