Date Released: First Quarter 2009

New Home Market

Total Housing Starts Eased in Fourth Quarter

The pace of housing starts in the fourth quarter dropped 21 per cent to 189 units from 240 units recorded during the same period in 2007. Although this fourth quarter decline resulted in an annual decrease of 24 per cent, it was still historically high.

Nonetheless, the decrease in housing starts is consistent with long-term demographics of slower population growth and in line with our annual forecast.

Price and sales in the existing home market have historically been predictors for future trends in housing starts. That is, existing and new homes are close substitutes in terms of providing shelter for homeowners. As a result, declining

sales of existing homes mean less spill-over demand into the new homes market.

Loyalist Township Experienced the Biggest Decline

While the Frontenac Islands reported an increase in housing starts in the fourth quarter; Kingston City, South Frontenac and the Loyalist Township's overall numbers were held down by weakness in single-detached starts. In Kingston City, total starts declined by 15 per cent in the last three months of 2008 compared with the same period in 2007. This decrease was almost entirely due to a significant drop in new single-detached construction. Meanwhile, in the South Frontenac Township, zero semis, row and apartment construction activity caused total housing starts to retreat by 45 per cent from the numbers reported during the last three months of 2007. However, the biggest housing starts decline was observed in the Loyalist Township, with total starts down by 56 per cent in the fourth quarter of 2008.

Single-detached Home Starts Moderated

Following an increase in the third quarter, single-detached home starts declined by 43 per cent between October and

December of 2008. Despite this decline, the fourth quarter construction activity was 26 per cent higher than the 2006 level. On an annual basis, single starts ended 2008 with 546 units – a nine per cent decline from the 600 units posted in 2007. The combination of consumers' concern about the weak economy and tougher lending standards resulted in decreasing single-detached home construction.

On the positive side, however, semi-detached starts continued its strong performance well into the fourth quarter, bringing the total number for 2008 to 48 units or 32 units higher than the level reached in 2007. The surge in new semi-detached homes indicated a shift in first-time home buyers' demand away from expensive single-detached homes to modestly priced townhomes and semi-detached dwellings. Meanwhile, the low vacancy rate in October 2008 saw

apartment starts picking up in the fourth quarter. There were 37 apartment starts between October and December of 2008 compared with zero units during the same period in 2007.

Resale Market

MLS Sales in the Fourth Quarter Hit 10-year Low

Kingston's existing home market in the fourth quarter of 2008 recorded a decrease in sales compared to the same period in 2007 – entirely due to increased pessimism over the health of the economy. Despite strong job creation in the fourth quarter and low mortgage rates, total MLS sales between October and December declined by 18 per cent to 495 units. This decline represents the lowest quarterly sales volume since the fourth quarter of 1998,

Figure 2

Figure 3

when approximately 468 existing homes changed hands. Meanwhile, the number of new listings reached a record high in the fourth quarter. A total of 1,064 homes were listed between October and December of 2008, up 4.4 per cent from the same period last year. With new listings outpacing sales, conditions in the resale market remained in balanced territory.

Kingston's Average MLS Price Growth Remains Positive

An indicator of price growth in the existing home market is the sales-to-new listings ratio (SNLR), which combines new listings, a gauge of supply in the existing home market and MLS sales, used as a proxy for demand. The lower the ratio the cooler the resale market in the area, which in turn leads to a downward pressure on existing home price growth. However, the SNLR for Kingston was firmly in balanced

territory during the fourth quarter of 2008. As a result, the average MLS price across Kingston increased only by 3.4 per cent in the fourth quarter down from the 3.8 per cent gains registered in the third quarter, when the ratio was close to sellers' market territory.

Economy

Kingston's Employment Resilient Despite Economic Slowdown

The Kingston Census Metropolitan Area (CMA) employment growth remained positive between October and December 2008. Despite the global economic slowdown, Kingston's employment in the fourth quarter was up 4.3 per cent over the same three month period in 2007. The educational services sector has been the main contributor in the employment growth this fourth quarter, with

year-over-year growth rate of 28 per cent. In contrast, health care services and public administration sector employment experienced slight declines between October and December 2008 compared with the same period in 2007.

Although residential construction activity declined significantly during the last three months of 2008, the construction sector also contributed to Kingston's overall job growth by employing 5,000 workers this fourth quarter – an increase of 19 per cent from the same period in 2007. Similarly, manufacturing and accommodation services sectors posted quarterly employment gains of 22 and 15 per cent respectively, over the fourth quarter of 2007. This increase in employment was primarily due to the weak Canadian dollar in recent months – thus making Canadian products and services more affordable.

Kingston's Full-Time Employment Still Growing

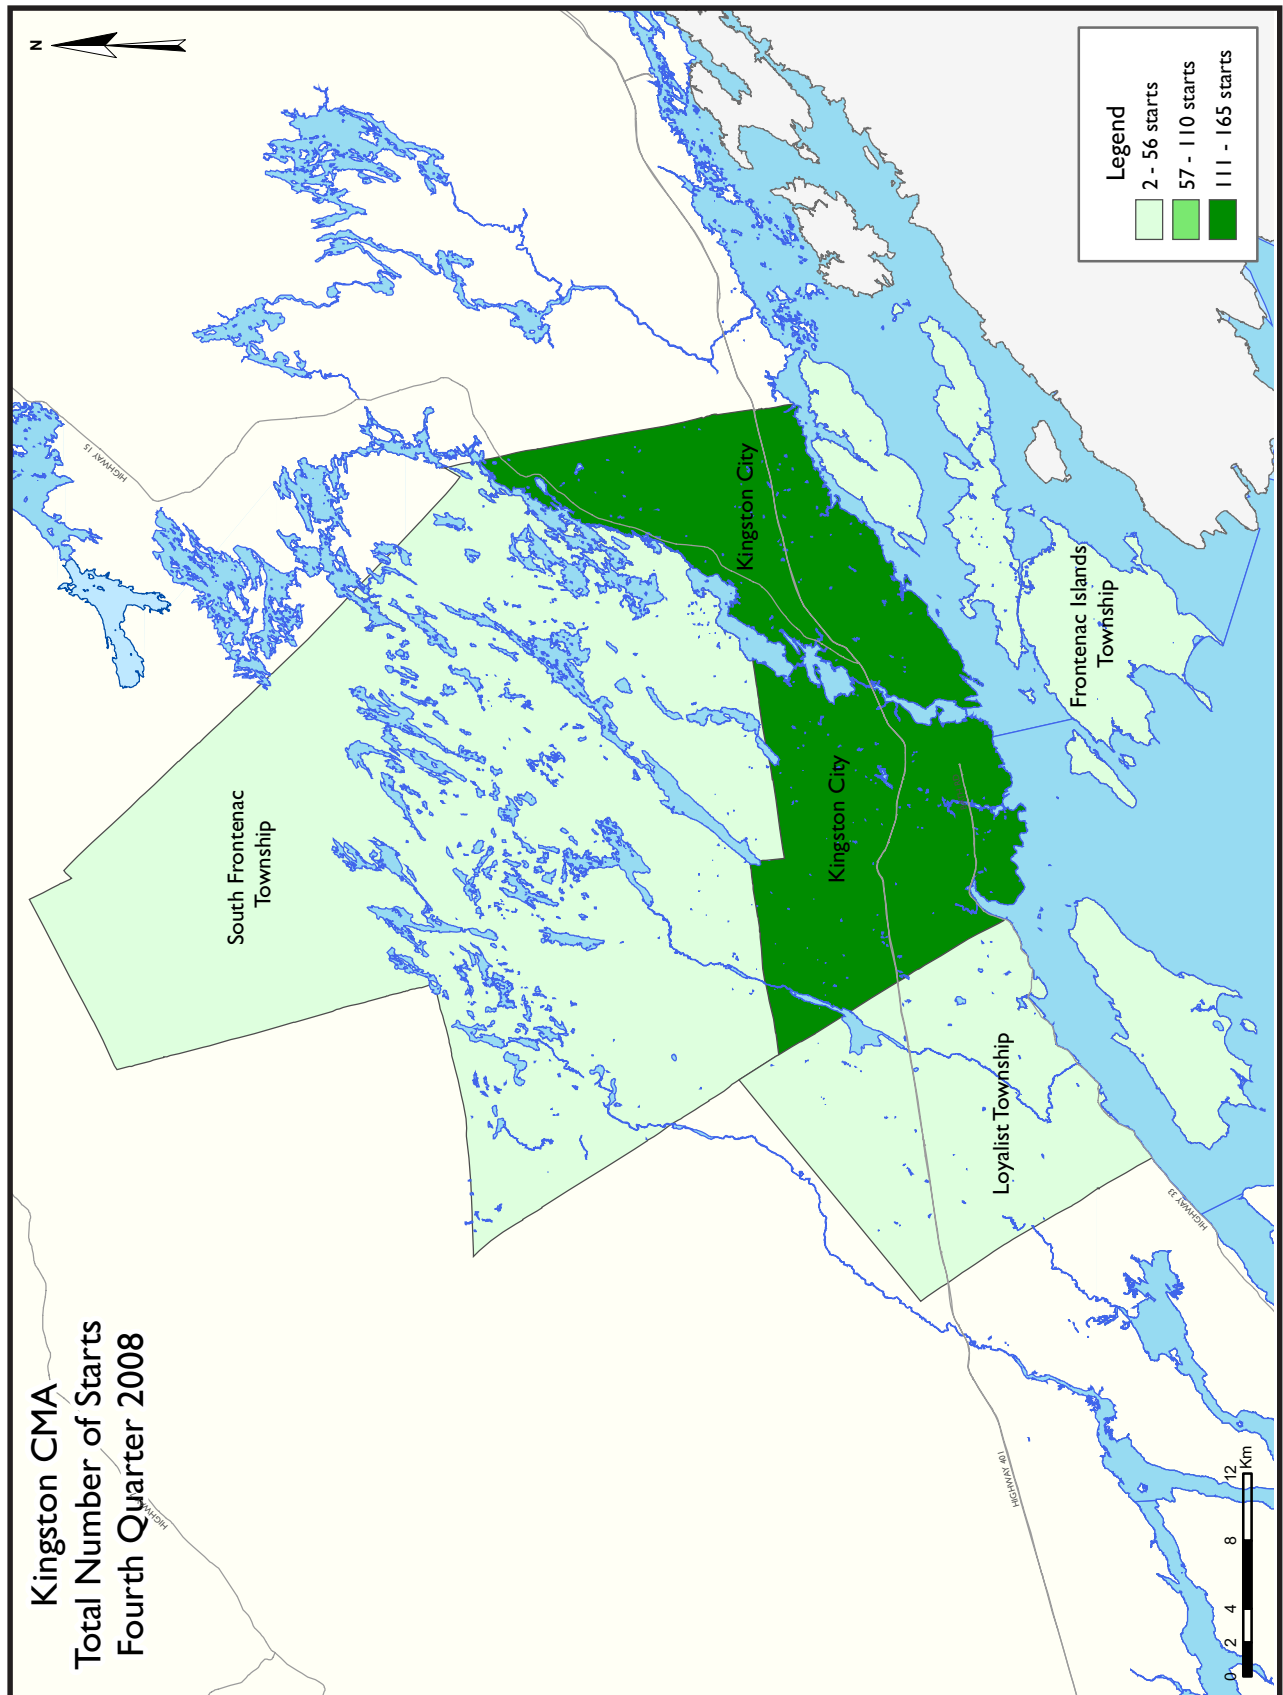

Between October and December 2008, Kingston's full-time employment grew by 6.1 per cent over the fourth quarter of 2007 – while part-time positions dropped 2.5 per cent during the same period. As the main vehicle for buying a new or existing home, strong full-time job gains combined with historically low mortgage rates should help reduce the impact of the economic slowdown on the housing market in 2009.

Despite December gains over the previous month, employment in the

Kingston's retail trade industry fell 21 per cent in the fourth quarter, as consumers are still cautious about opening up their pocketbooks in an unfavourable economic climate.

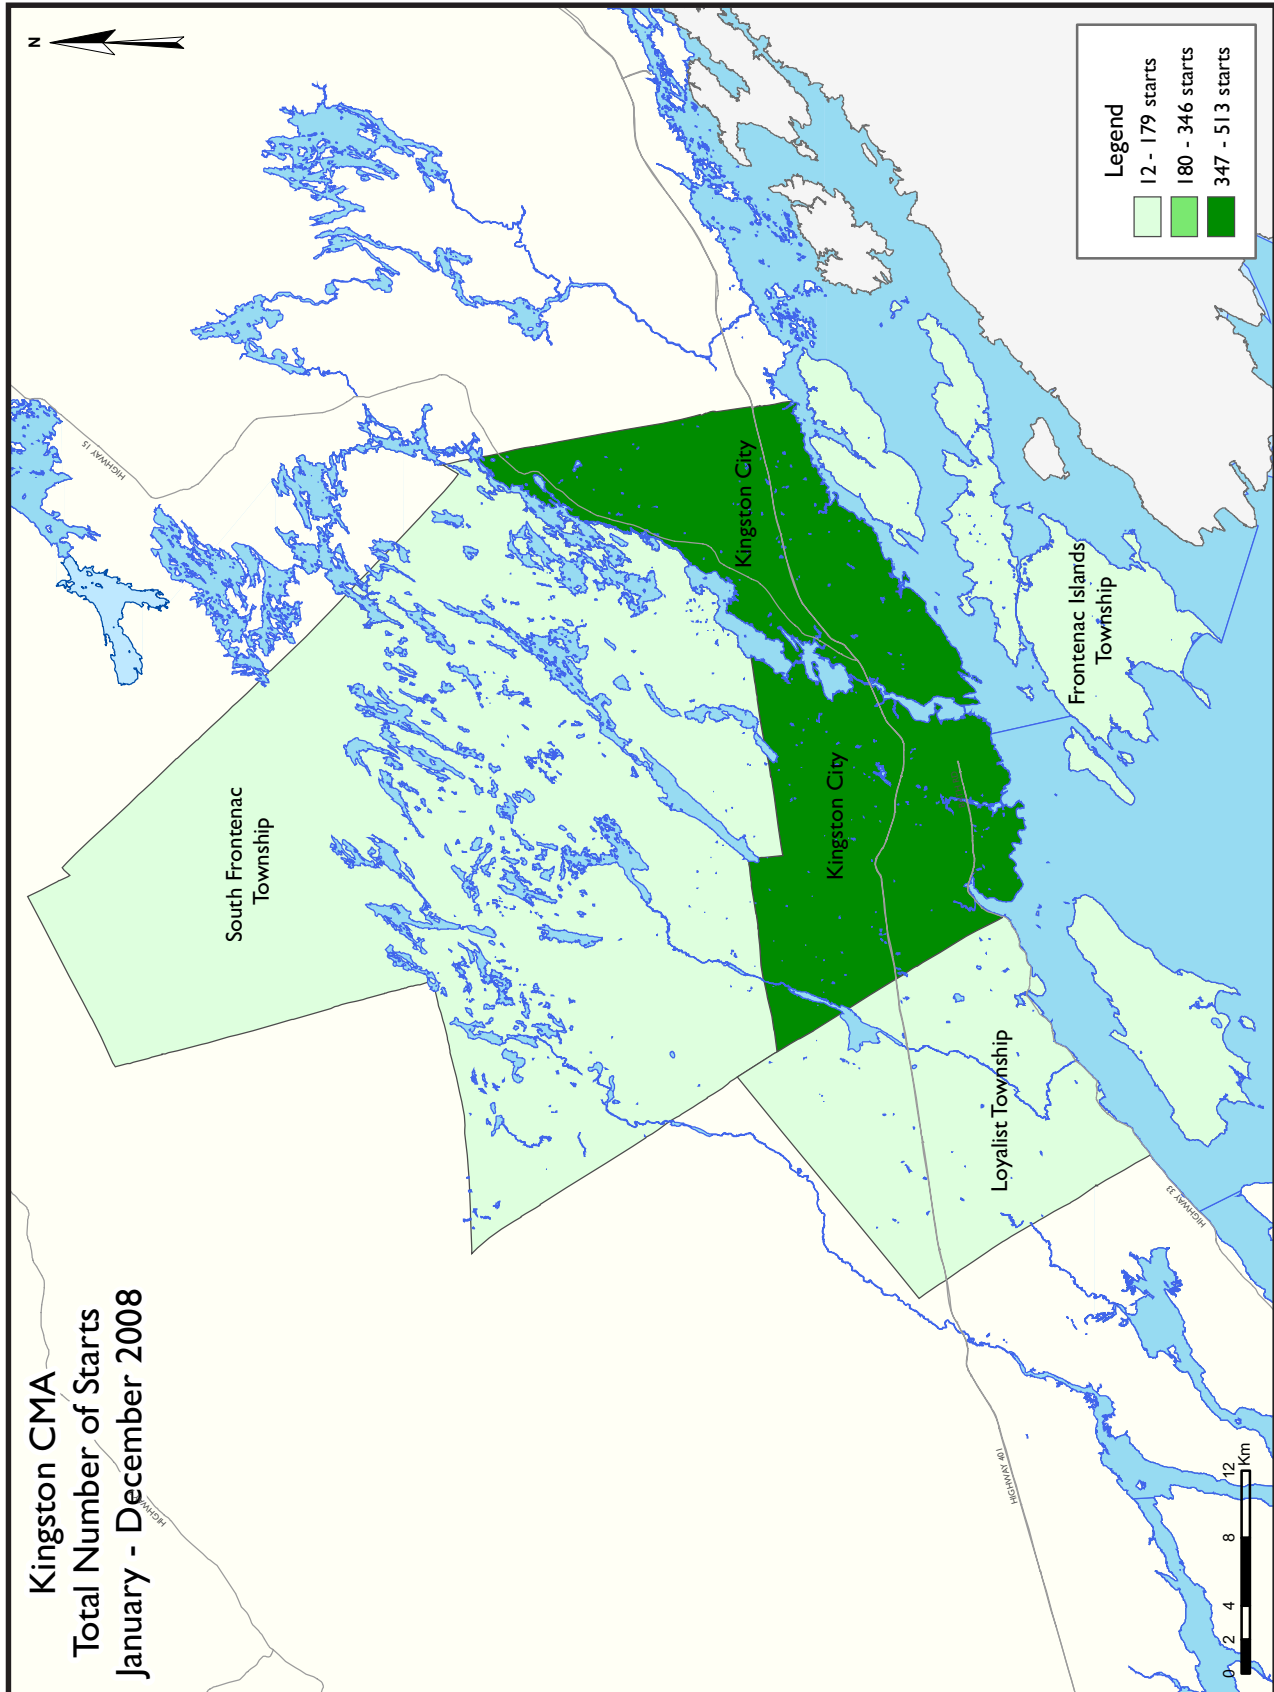

Nevertheless, the diversity of Kingston's economy has helped to maintain positive ground in a period of economic uncertainty. As a result, the CMA posted 1.4 per cent

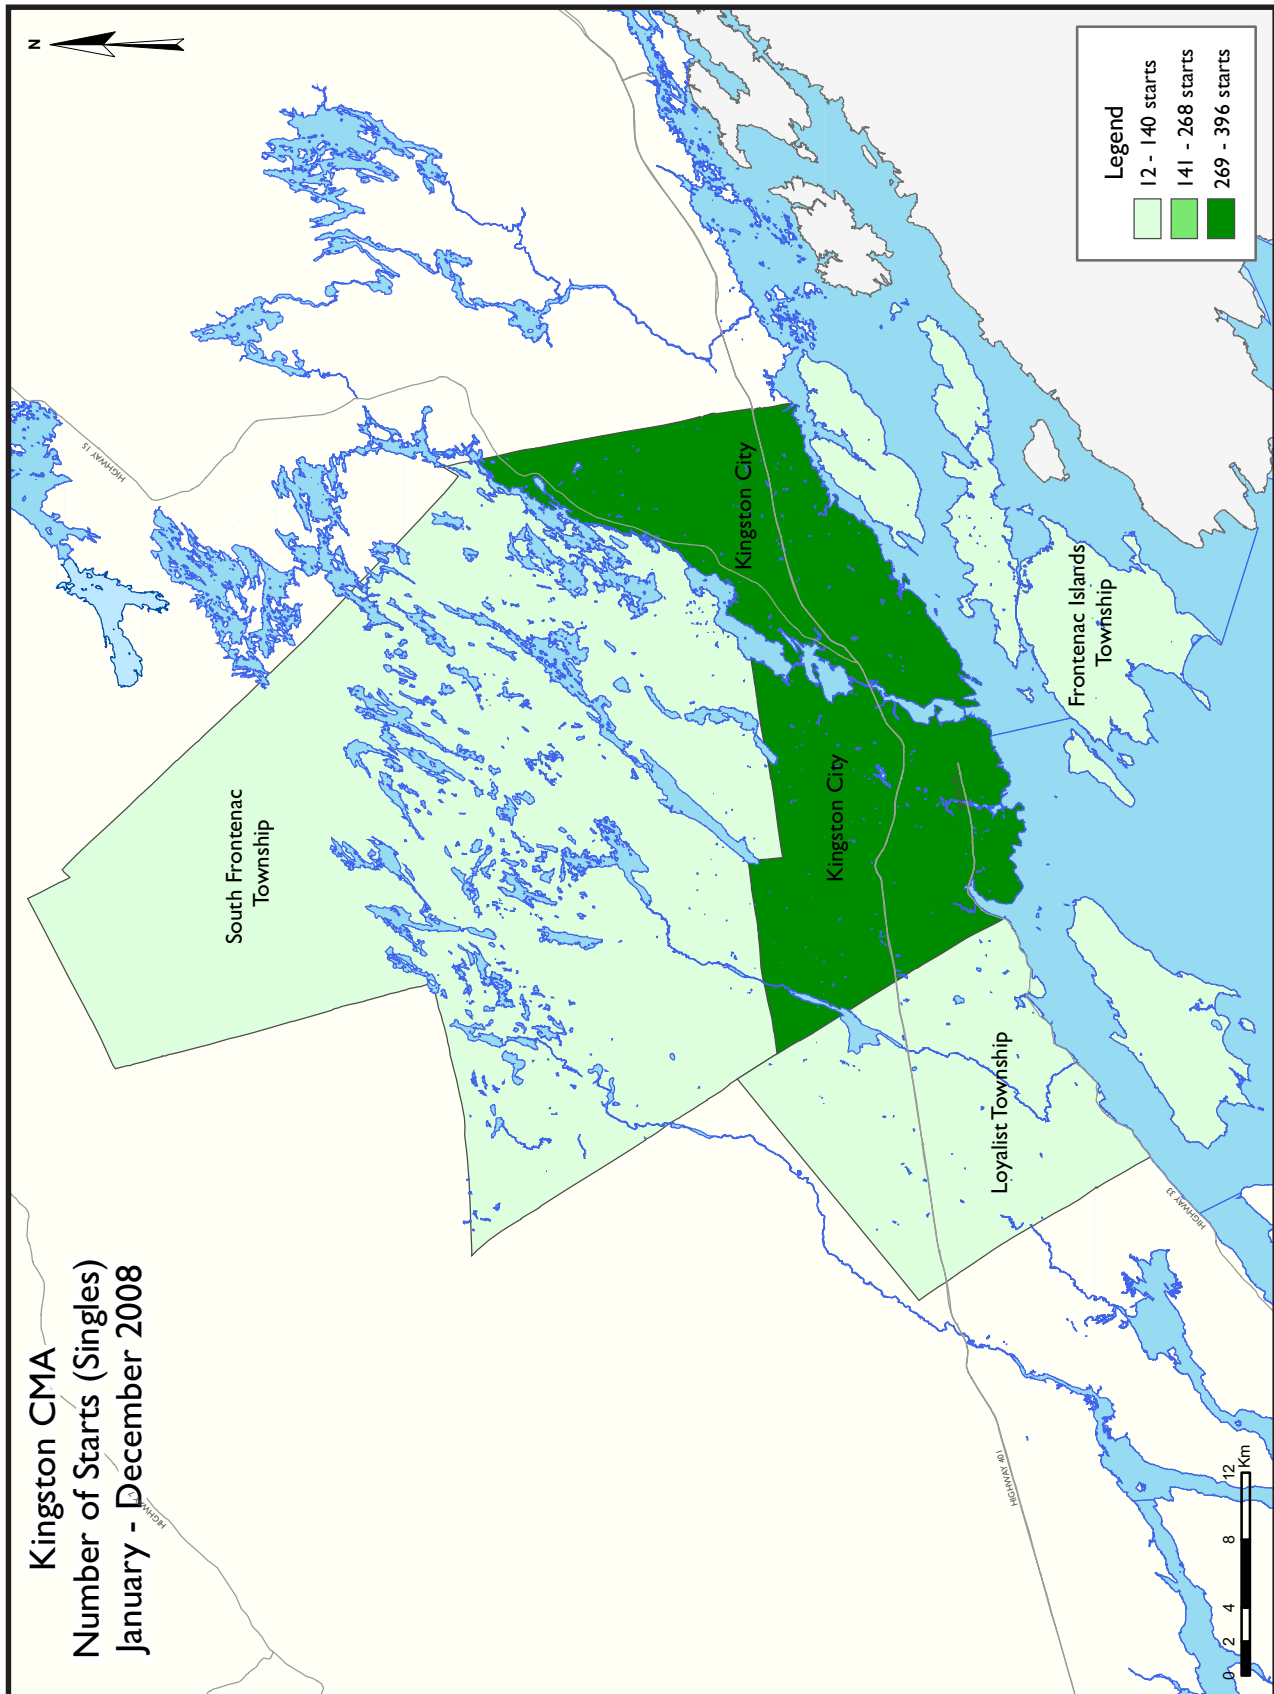

increase in total employment for 2008 – a total of approximately 1,100 net new jobs created this year over 2007.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.

For more information, visit our website at www.cmhc.ca

You can also reach us by phone at 1-800-668-2642 or by fax at 1-800-245-9274.
Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is now available for free on CMHC's website. You can now view, print, download or subscribe to future editions and get market information e-mailed automatically to you the same day it is released. It's quick and convenient!
