Canada Mortgage and Housing Corporation

Date Released: Second Quarter 2009

New Home Market

Home Construction Started Low

As in most other centres across the province, home starts in the St. Catharines-Niagara CMA (hereinafter Niagara) have also dropped in the first quarter of 2009. The decline from the same quarter of 2008, at 52 per cent, was primarily attributable to a lower

number of starts of single-detached homes. New construction of apartments, which can vary substantially from quarter to quarter, was down significantly. Townhouse starts, on the other hand, trended up fairly strongly – 16 per cent. As the economic slowdown takes hold, buyers tend to opt for affordable homes such as townhouses instead of detached homes.

In 2009, starts of single-detached homes were down in all municipalities across Niagara. This decline pulled down the level of total new home construction in most of the municipalities. However, starts in Lincoln and Niagara-on-the-Lake were propped up by strong townhouse starts. Welland was the other municipality where builders started more townhouses that they had at the same time last year. First quarter 2009 new townhouse construction was mostly targeted to senior households. Builders offer spacious one-storey two-bedroom units conveniently located close to amenities, such as golf courses, hospitals, or the canal, and with some located in historic districts. Some of the townhouse projects are luxury homes sitting on large lots, whereas others started as part of brownfield redevelopment projects taking advantage of government tax incentives. The latter makes more intensive use of residential building sites, which is particularly essential in built-up communities, such as the City of St. Catharines.

In line with the contraction in the starts of single-detached homes, their average price in the first quarter of 2009 tapered off. The average price of a new detached home in Niagara declined by less than one per cent to \$385,000. Conversely, the median price for single-detached homes, which shows the price above the price of one half of all new detached homes sold in the market, edged up pointing to a fewer sales of very expensive homes in the region. Almost 30 per cent of new single-detached homes were sold at a price above \$400,000 which will be

subject to Harmonized Sales Tax effective mid-2010.

The price gap between new and resale single-detached homes observed since 2006 continues to widen. As resale homes show signs of moderation, the builders are able to compete with existing homes by offering to potential buyers more incentives in the form of free upgrades to new homes. This enabled the builders to avoid the pile-up of the inventory of completed and unsold single-detached as well as other types of homes. Their level remained about the same from the same quarter of last year.

Resale Market

Market Favours Buyers

Niagara's resale housing market activity in the first quarter of 2009 continued to moderate with the number of transactions registered through the MLS® system down about a quarter

when compared to the same period of last year. As the economy continues to cope with declining consumer and investment spending as well as a contraction in export volumes, the rising unemployment rate in Niagara adds to the uncertainty for potential buyers, deterring their entrance into the market.

Sales dropped in all submarkets of Niagara except in Thorold. Sales of existing homes in traditionally the most expensive market in the region, Niagara-on-the-Lake, slumped the largest, by more than a half, as buyers curb their spending more on luxury type of homes. Home sales in this submarket however represent only three per cent of total sales transactions. Sales in the two biggest markets, St. Catharines and Niagara Falls, which combined accounted for 55 per cent of all home resale activity in Niagara, came off at about 20 per cent, a slower rate of decline than the average for the region.

Figure 2

The number of homes listed on the market in the first quarter of 2009 plateaued from the same period of last year. The change in new listings across submarkets was quite diverse. The number of new listings picked up in the relatively more expensive markets such as Niagara-on-the-Lake and Pelham/Fonthill and declined in St. Catharines and Thorold. As prices peaked in the current business cycle in September 2008, many homeowners were enticed to list their properties on the market. The softening of the market and decline in listings since then implies some sellers are unwilling to accept a lower price.

The sales-to-new-listings ratio (SNLR), which is a good indicator of price growth and a measure of the state of the resale home market, moved lower as a result of weaker sales with near flat level of new listings. The average SNLR for the first quarter of 2009 sat right at the boundary of what is considered a buyers' market and a balanced market at 35 per cent. As a rule, a buyers' market is associated with the moderation of existing home price.

The average MLS resale home price in Niagara retreated to just below \$190,000, down seven per cent from the first quarter of 2008. In percentage terms, the price for homes sold in the two relatively high-price submarkets of Niagara-on-the-Lake and Lincoln/West Lincoln declined by double digits. Above-average price drops were also registered in the relatively inexpen-

sive markets of Fort Erie and Port Colborne/Wainfleet. There were two submarkets where average resale home prices advanced – Pelham/Fonthill and Thorold. The softening market conditions also show in the decline of sale to listing price, which roughly represents the price discount to the final sale price from the initial listing price, with Niagara Falls and St. Catharines being relatively tighter markets selling at a lower discount from the listing price in the first quarter of 2009.

Economic Factors

Labour Market Softens

After a strong 2008, in which employment increased two per cent, Niagara's labour market reflected the weakening economy in the first quarter of 2009 with widespread lay-offs. More than five per cent or close to 11 thousand jobs disappeared from the market in the quarter compared to the same period of 2008. Most of the job cuts occurred in the automotive and related industries, induced by the downsizing at General Motors St. Catharines plant, as well as a falling world demand for steel and other products. The softening of the demand for new homes affected employment in the construction industry. Several service sectors – finance, trade, tourism and business services – were not immune from the economic downturn either.

All the local job losses were full-time positions, with only a few part-time jobs mitigating the impact. Employment of relatively younger workers, those aged 15-24, and relatively senior workers, those aged 45 and above, shrank by over 14 and 11 per cent respectively. Low employment of the former group, which represents a potential for first-time buying, is consistent with the fact that in Niagara a relatively high proportion of adult children, age 20 to 29, live at home with their parents. According to most recent census statistics, only in Toronto, Oshawa and Hamilton is this ratio higher than in Niagara.

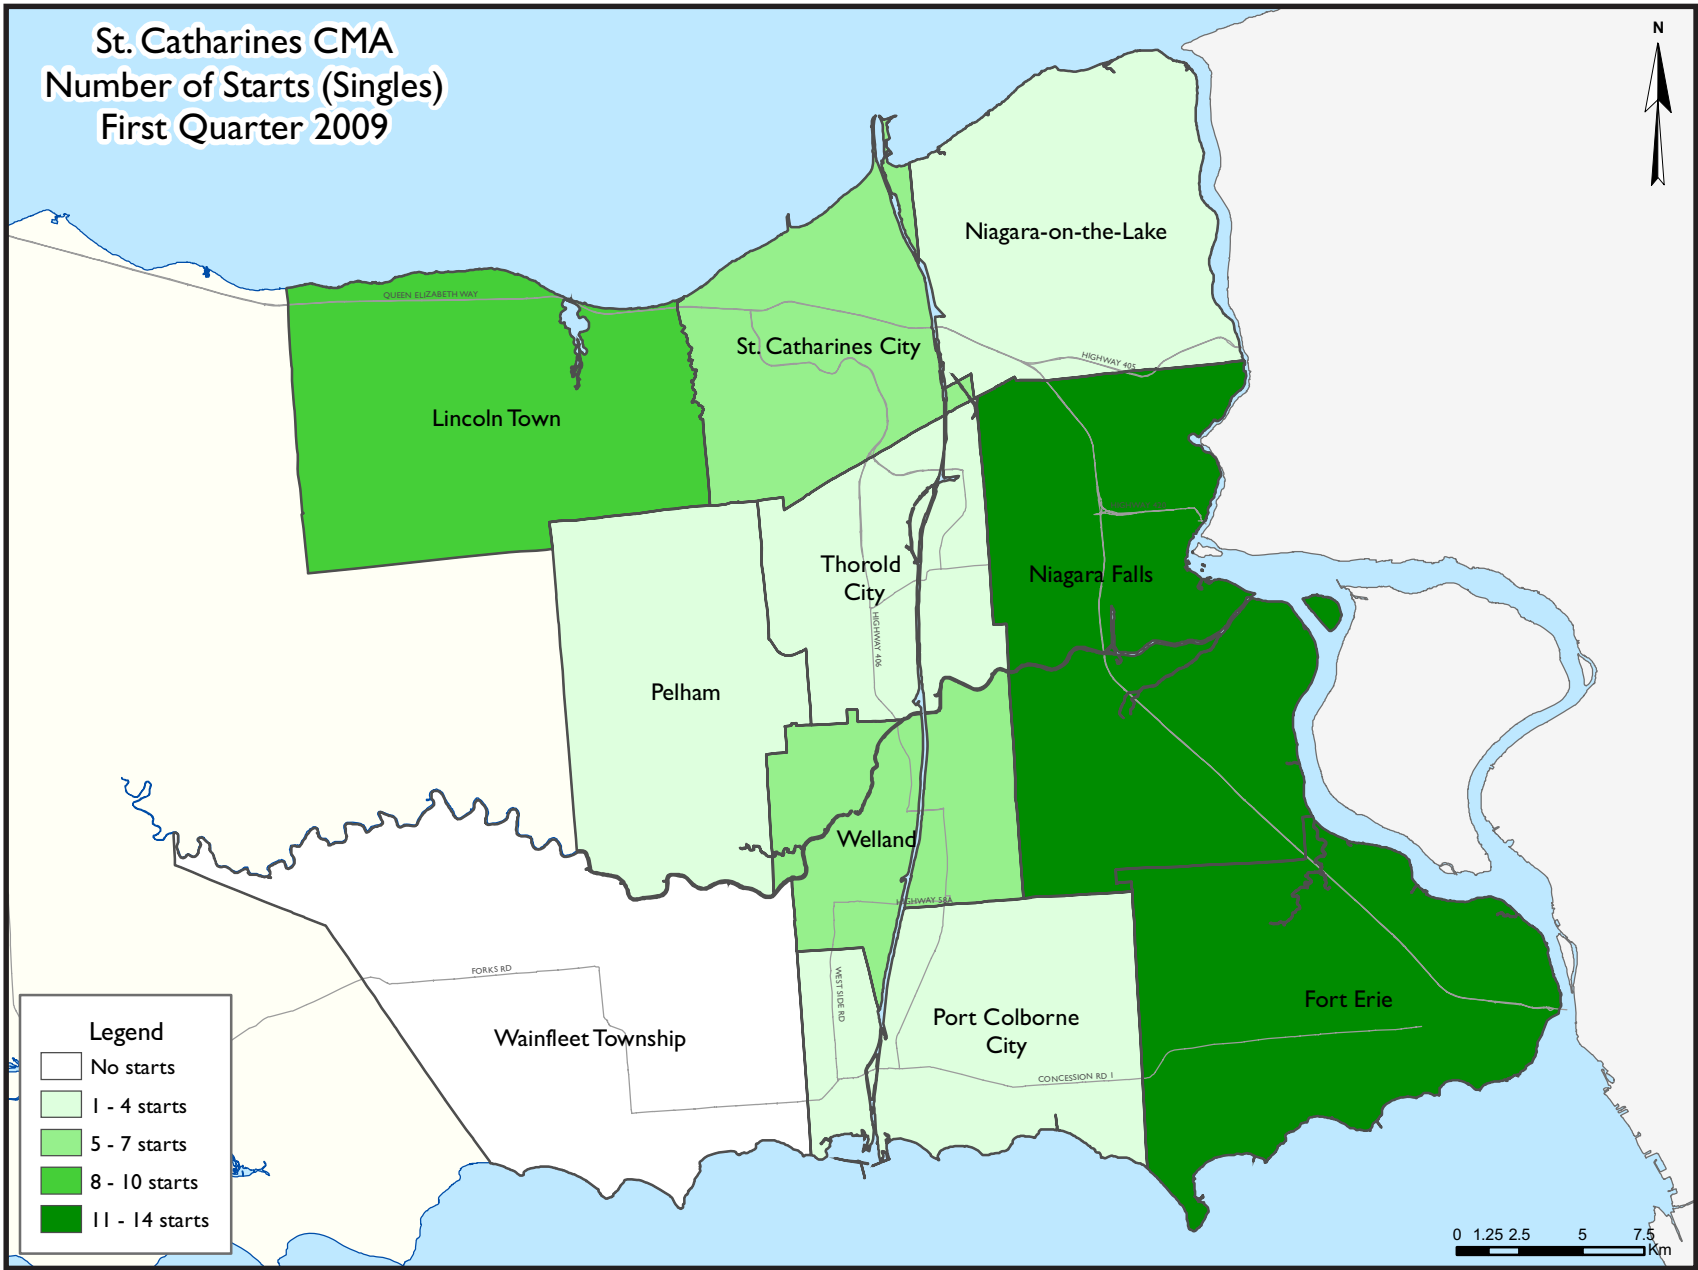

The seasonally adjusted unemployment rate in Niagara trended further up reaching 9.6 per cent in the first quarter of 2009. The decline in employment surpassed the number of people who quit the labour force leading to a proportionally higher percentage of those out of jobs this quarter.

The recent announcement of the extension of the GO bus service to St. Catharines and Niagara Falls will positively reflect on the transportation link of the region with the GTA encouraging more people to consider becoming homeowners in Niagara. Despite residential property value gains in the region of about 60 per cent since the beginning of the century, the price of homes vis-à-vis other areas in the Golden Horseshoe Area continues to make Niagara an affordable home buying destination.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.

For more information, visit our website at www.cmhc.ca

You can also reach us by phone at 1-800-668-2642 or by fax at 1-800-245-9274.
Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is available for free on CMHC's website.
