Date Released: First Quarter 2009

New Home Market

Persistent decline in Residential Construction

New home construction in the Windsor Census Metropolitan Area¹ (CMA) fell to its lowest level since 1984. Total starts dropped 26 per cent to 453 units in 2008 compared to the 614 units started in 2007. In 2008, foundations for 417 single-detached homes, the most popular

home type in the Windsor CMA, were laid.

Consumer sentiment is the major cause for this persistent decline in Windsor's housing starts. High energy costs and a strong Canadian dollar during the first eight months of 2008 combined with slumping sales of vehicles made by the US-based automakers negatively affected consumer sentiment and their willingness to buy new homes. Adequate choice in the lower-priced

resale market also lured buyers away to purchase resale rather than new.

Single-detached home starts moved lower in most of the municipalities in the Windsor CMA. The only exception was in Lakeshore, where the number of single-detached home starts remained the same.

At \$311,852 the average price of new homes jumped by 9.1 per cent. LaSalle and Lakeshore had the largest increases. New homes in the Windsor CMA area continued to be nearly twice as expensive as the average resale home.

High end homes became very popular in Windsor CMA in 2008. Priced above \$350,000, these homes accounted for 27.1 per cent of homes started in the year 2008, a large increase in share when compared to the 19.1 per cent recorded in 2007. Other higher end homes were also well accepted. Priced between \$250,000 and \$349,999, the percentage share of these homes to total starts was up to 15.1 per cent in 2008 from 10.6 per cent in 2007. As for lower end homes, the percentage share continued to decline for houses priced below 249,999.

Resale Market

Resale Home Sales Outperformed New Home Construction

Compared to the new homes, sales of resale homes through Multiple Listing Services (MLS®) fared better. While new home construction declined by 26 per cent, a total of

4,546 resale homes changed hands in 2008, down only 8.8 per cent from 2007.

Unemployment is the major cause for the softness in Windsor's resale market. With one of the highest unemployment rates in the country (10.1 per cent), consumers tend to be very cautious when considering homeownership. The high unemployment rate is also contributing to the net population outflows from the Windsor CMA. Many are leaving this area to look for employment elsewhere.

The number of new listings remains high. A total of 11,197 homes were listed in 2008, which is only slightly lower than the 11,718 listings recorded in 2007. Many owners are selling their homes with the objective of moving to other areas with more stable job conditions.

With high listings and low sales, the sales-to-new-listings ratio, a measure of market state, moved lower

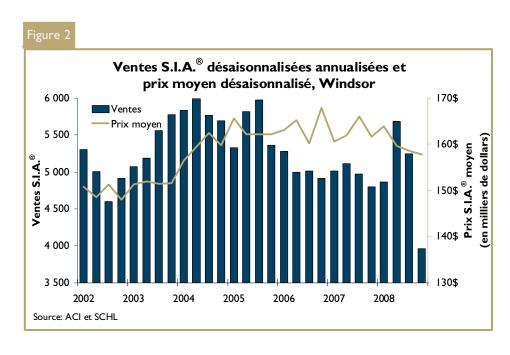

indicating the resale market continued to favour buyers. In a buyer's market, homes tend to take longer to sell and home prices tend to grow slower than the general rate of inflation.

With a buyer's market in Windsor, the average price of resale homes came in at \$159,700 in 2008, down by 2.1 per cent. Windsor's drop in resale home prices is a direct result of lower ownership demand.

Economic Factors

Local Economy

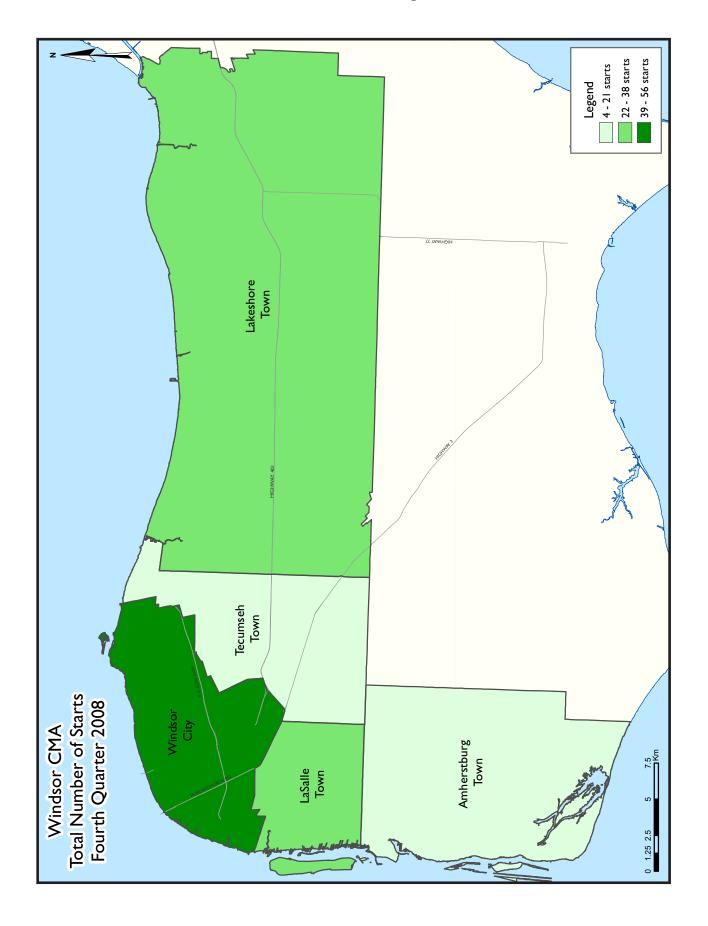

Although Windsor's labour market improved slightly during the first half of the year, the trend reversed in the third quarter of 2008 and the year ended with an unemployment rate of 10.1 per cent. Weak U.S. consumer confidence contributed to lay-offs in the automotive sector and soft service sector employment.

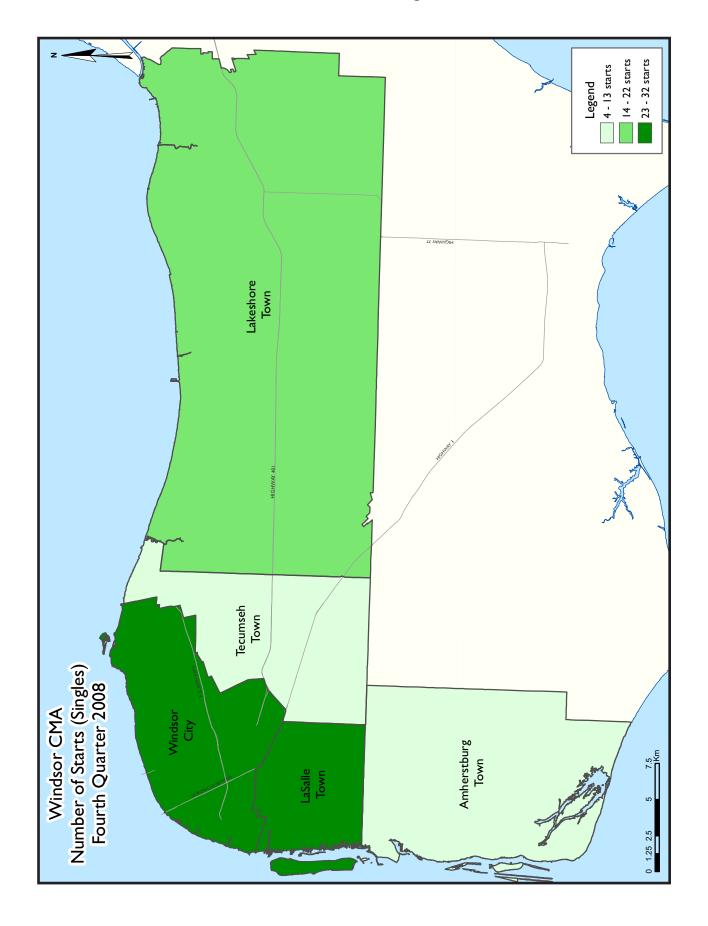

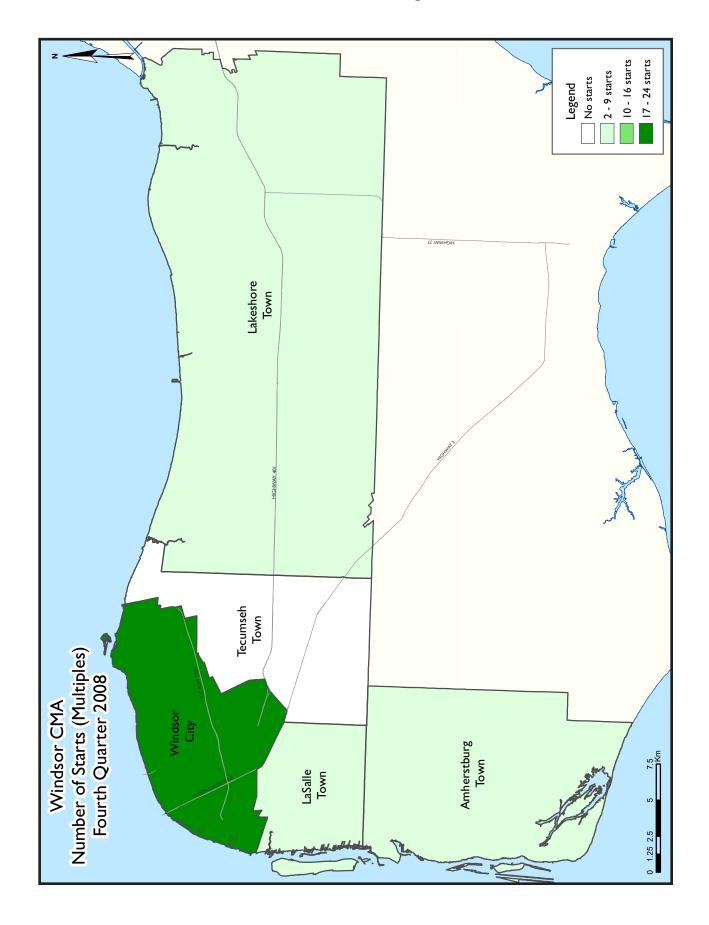

Earlier in 2008, Centroy Assembly, an auto parts manufacturer closed its plant in Thamesville. Other plant closures/layoffs have also been announced and will be carried out in 2009. These plant closures and layoffs include GM's transmission plant in Windsor, International Truck's plant in Chatham and Nemak's aluminum plant in Essex. Service sector employment remained flat since fewer tourists from the U.S. are visiting Windsor and area. A strong Canadian dollar and high energy prices in 2008 made it more expensive for Americans tourists to visit. Weak consumer confidence also limited Americans' willingness to spend on traveling.

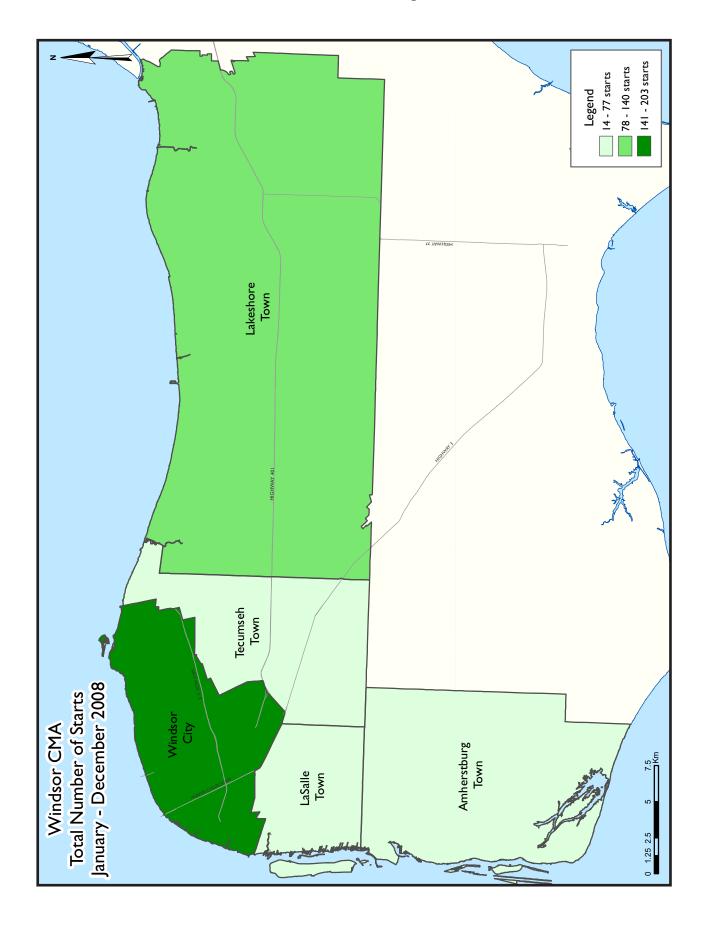

(Footnotes)

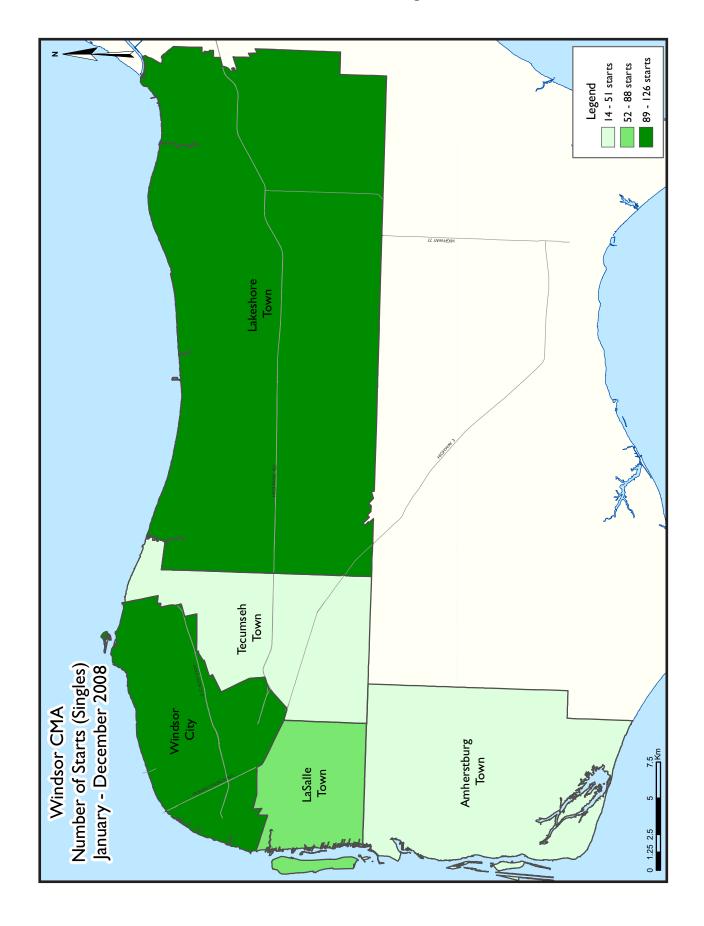

¹ Census Metropolitan Area. Statistics Canada defines a census metropolitan area (CMA) as one or more adjacent municipalities integrated with an urban core. A CMA must have a total population of at least 100,000 of which 50,000 or more must live in the urban core.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi-categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, dubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "**start**", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada's 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.

For more information, visit our website at www.cmhc.ca

You can also reach us by phone at 1-800-668-2642 or by fax at 1-800-245-9274. Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.
