## Edmonton CMA

Canada Mortgage and Housing Corporation

Date Released: January 2009

### New Home Market

#### Lower Housing Starts in 2008

Housing starts in the Edmonton Census Metropolitan Area (CMA) totalled 324 units in December, representing a 44 per cent decline from the 578 total units reported in December 2007. For all of 2008, total housing starts reached 6,615

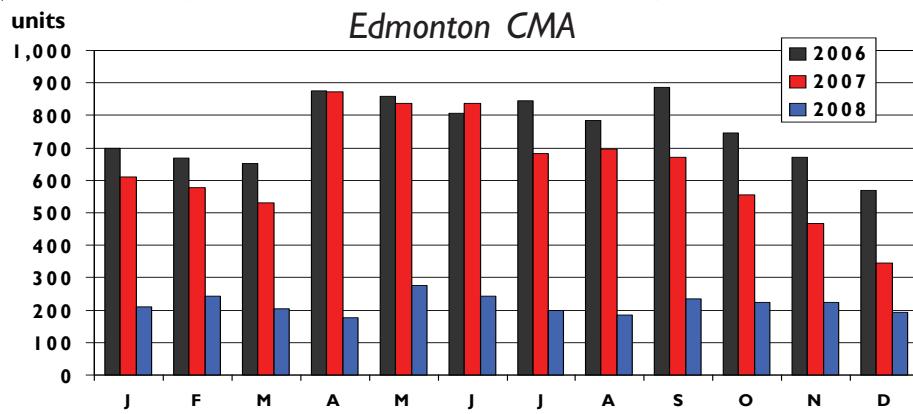

units down 55.6 per cent from the 14,888 total starts recorded in 2007.

Single-detached starts across the Capital region amounted to 194 units in December, representing a decrease of 44 per cent from the 345 units started in December 2007. Single starts in all of 2008 dropped by two-thirds to 2,613 units compared with 7,682 units started from January to December of 2007. Production in 2008 represented the slowest year for the region's builders

Figure 2

since 1995 when 2,159 basements were poured for single-detached units.

The slowdown in starts in 2008 has resulted in a significant decline in the number of homes under construction at year-end. At the end of December, CMHC tallied 2,261 single-detached homes in progress across the region, representing the lowest level since April 2002. This will impact both the number of completions and absorption rates in the coming year. For example, single-detached completions in December were down by 58 per cent year-over-year to 309 units. At 333 units, absorptions were half the amount recorded in December 2007.

One bright spot for builders in December was the continued decline in the unsold inventory of new single-detached homes. After peaking at 1,090 units in August, inventories have declined steadily in the past four months. While the total number of completed and unoccupied singles, including show homes, was still 18

per cent higher year-over-year at the end of December, the 986 units on hand represented the lowest level since May. A continued erosion of inventory in the months ahead should encourage a modest up-tick in single-detached starts during the second half of 2009.

The price of single-detached homes absorbed across the region averaged \$530,270 in December, up 9.5 per cent from December 2007. Readers should note that the absorbed prices of many of these units were negotiated before construction began. For the year, the average price for absorbed singles rose by 17 per cent over 2007 to \$511,989. This trend should soften in the months ahead as Statistics Canada's New House Price Index (NHPI) was down on a year-over-year basis for five consecutive months ending November 2008.

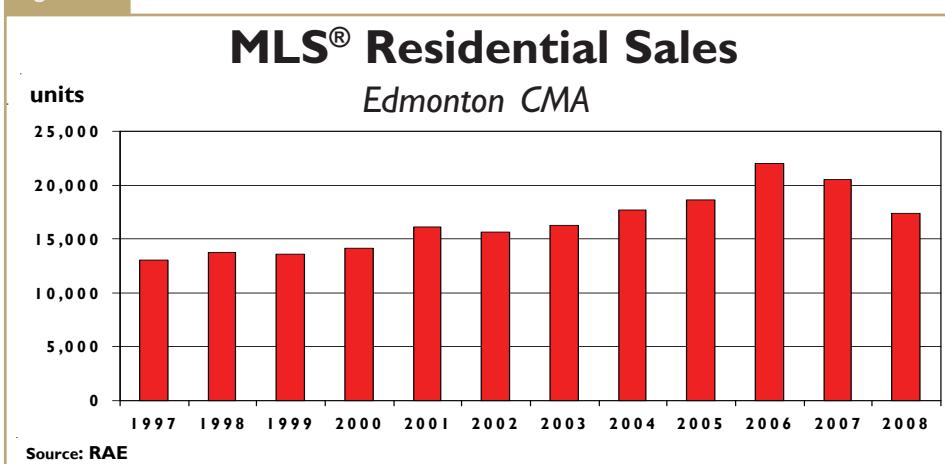

Multiple unit starts throughout Greater Edmonton totalled 130 units in December, down 44 per cent from the 233 multiples started in same month a year earlier. Row and

apartment starts combined were 67 per cent lower than December 2007 numbers, although semi-detached starts improved to 76 units compared with 70 starts a year earlier.

For the year, multi-family starts totalled 4,002 units, down 44 per cent from the 7,206 units tallied in 2007, representing the lowest level since 2001 when 2,896 foundations were poured for multi-family units. Activity in 2007 reached a 25 year high and set the stage for the reduction observed across the region last year. Despite the decline in production, 2008 was the seventh consecutive year that annual multi-family starts eclipsed the 4,000 unit mark across Metro, a feat not seen since the early 1980's.

Multi-family completions dropped substantially to 143 units in December compared with 277 completions during the last month of 2007. This contributed to a big reduction in absorptions which nonetheless managed to outpace completions and reverse the recent upturn in multi-unit inventories. Regardless, unabsorbed inventories were still 43 per cent above the 358 units reported in December 2007. With 9,148 multiple units under construction across the region at year end, down only 11 per cent from December 2007, CMHC expects completions to rise in the coming months. Without a concurrent increase in absorptions, inventories will also head upward this year causing further reductions in multi-unit starts across Metro.

Figure 3

## Resale Market

### Market Slows in 4th Quarter

On the heels of a 29 per cent year-over-year improvement during the third quarter, total MLS® residential sales in the Edmonton region fell by 18 per cent in the fourth quarter to 2,750 units. For the year, sales reported by the Realtors® Association of Edmonton fell by 15 per cent to 17,371 units. Last year's activity was on par with the sales levels reported in 2004 but well below the 20,000+ units sold on average during the period 2005-2007.

While supply levels on the MLS® also retreated during the fourth quarter, the overall market balance continued to favour buyers. New listings entering the market dropped by over 17 per cent year-over-year during the fourth quarter and 2.1 per cent for the year compared with all of 2007. At year end, total active listings stood at 6,316 units, down 11 per cent from the end of the previous year.

On an historic basis, however, inventories remained high with sales-to-active listings ratios averaging well below 20 per cent on a seasonally adjusted basis during the last three months of the year.

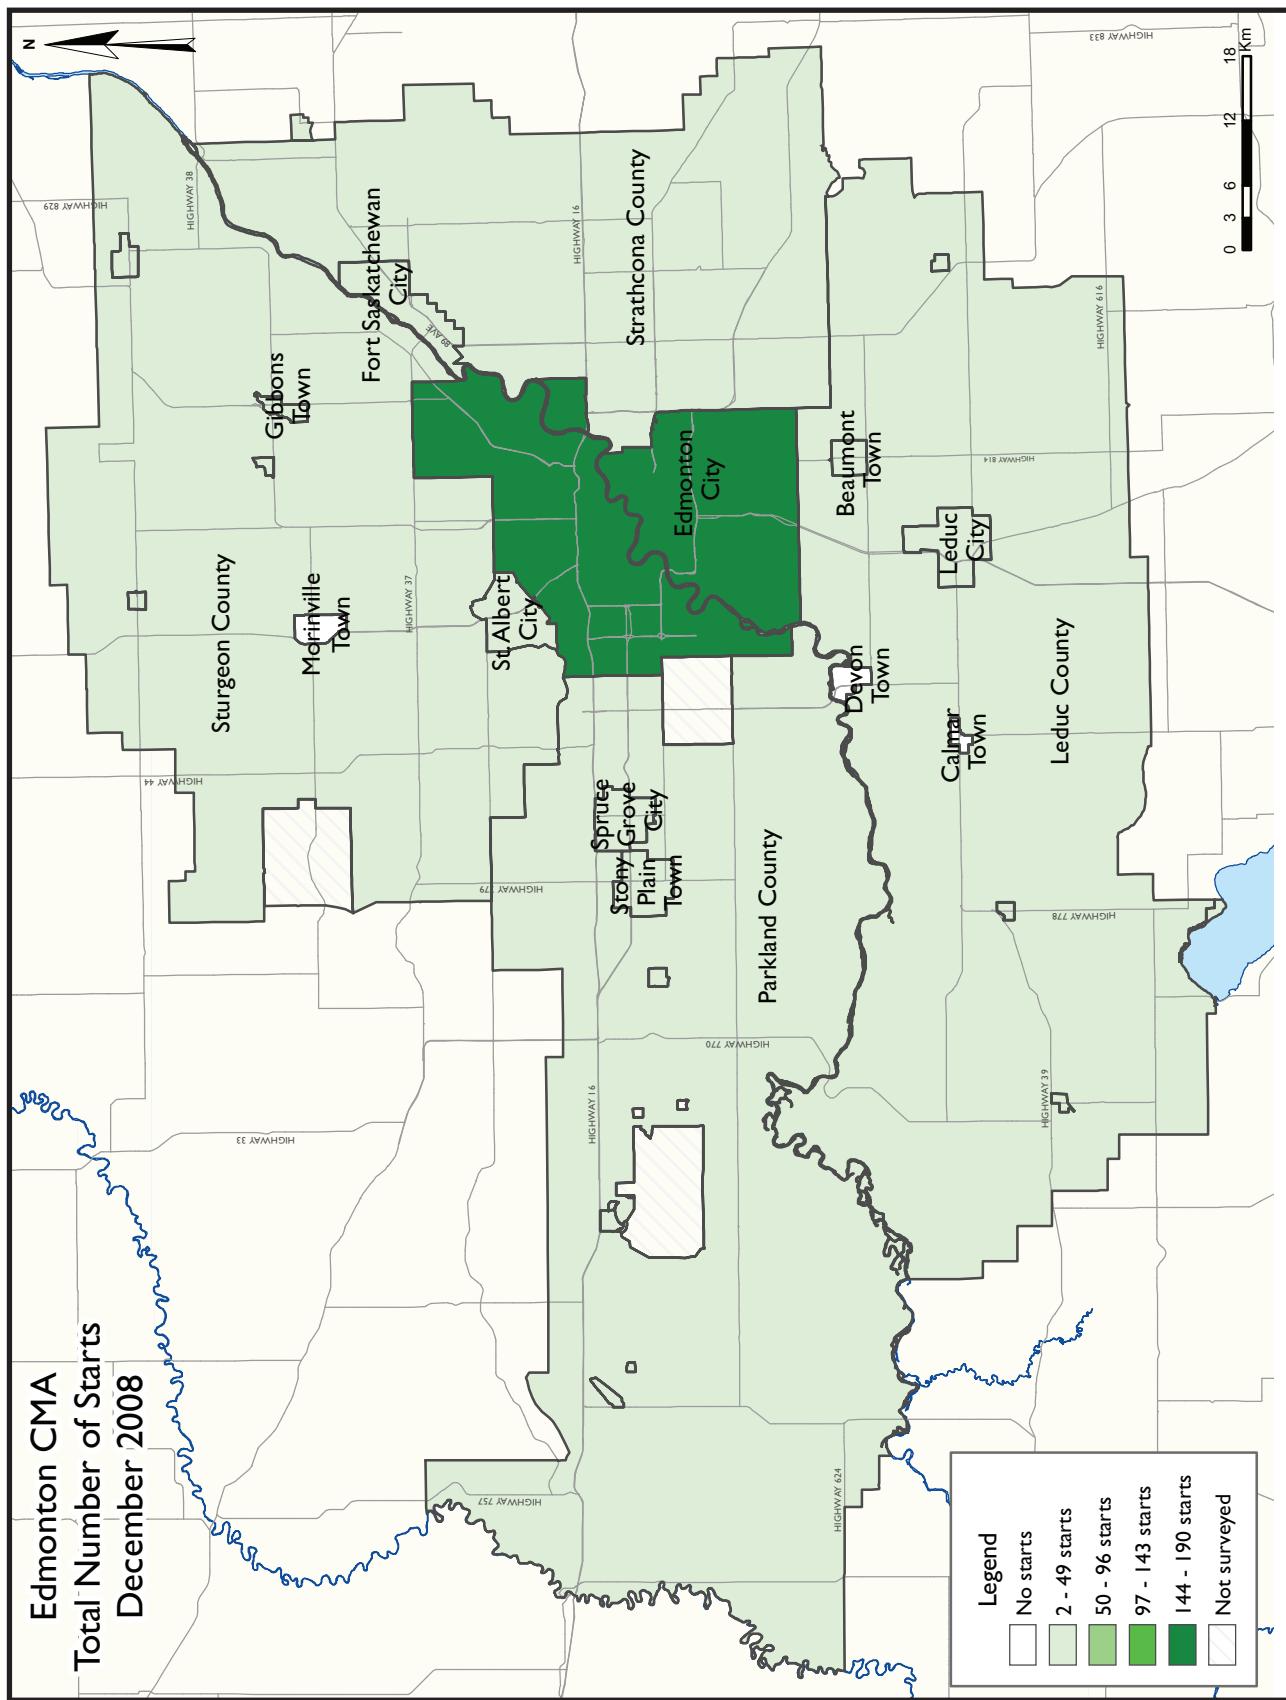

With less than one in five homes selling each month on average during the final quarter of 2008, resale prices have been trending downward. The average residential resale price in December stood at \$310,974, representing a six per cent decline year-over-year and the lowest level since January 2007. On an annual basis, the MLS® resale price dropped by 1.5 per cent to \$332,853, representing the first yearly decline since 1996. The single-detached average price experienced a larger decline in 2008, decreasing by just over six per cent to \$375,952 compared with an annual average of \$400,304 in 2007. Part of the difference in the rate of price decline between singles and the overall residential resale average can be explained by a shift in the sales mix. Fewer condos sold last year relative to single-detached units which tended to sell at a higher price on average.

## Economy

### Labour Market Shows Resilience

Despite evidence of a slowing labour market across North America, job creation remained strong across Greater Edmonton last year. Employment growth averaged close to 22,030 jobs during 2008 and the unemployment rate remained amongst the lowest of all major Canadian cities. Average weekly earnings increased by over six per cent on a year-to-date basis to the end of December. However, a slowdown is on the horizon due, in part, to weakness in the construction industry and a cooler energy sector. In December, the seasonally-adjusted unemployment rate in Alberta increased to 4.1 per cent from 3.4 per cent in November. During the same time frame, employment fell by 15,800 people largely due to job losses in construction.

Meanwhile, population estimates released by Statistics Canada show that Alberta's population had the highest third quarter year-over-year growth rate among all provinces. Record levels of net non-permanent residents accompanied strong gains from international sources and the largest inter-provincial migration gains in Canada. The higher inter-provincial numbers in the third quarter came largely from higher net inflows from Ontario and Quebec although the province continued to experience net losses to Saskatchewan and British Columbia.

## HOUSING NOW REPORT TABLES

## METHODOLOGY

### **Starts & Completions Survey Methodology**

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### **Market Absorption Survey Methodology**

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
