Canada Mortgage and Housing Corporation

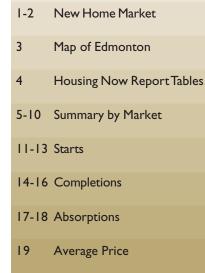

Date Released: March 2009

### **New Home Market**

# Lower Housing Starts in February across Greater Edmonton

Housing starts in the Edmonton Census Metropolitan Area (CMA) totalled 213 units in February, down from 692 units recorded in February 2008. So far this year, total new housing activity has reached 626 units across Metro, down from the 1,837 starts reported in the first two months of 2008.

Edmonton's builders poured foundations for 149 single-detached homes in February, for a decrease of 39 per cent from the 243 units started in the second month of 2008. To the end of February, 296 single-detached homes were started compared with 452 during the same time last year. CMHC expects single starts to remain slow throughout

much of 2009. Year-over-year increases in monthly activity are not anticipated until after mid-year, provided new house inventories head lower. Notable year-over-year increases in single-detached starts will not likely occur until 2010.

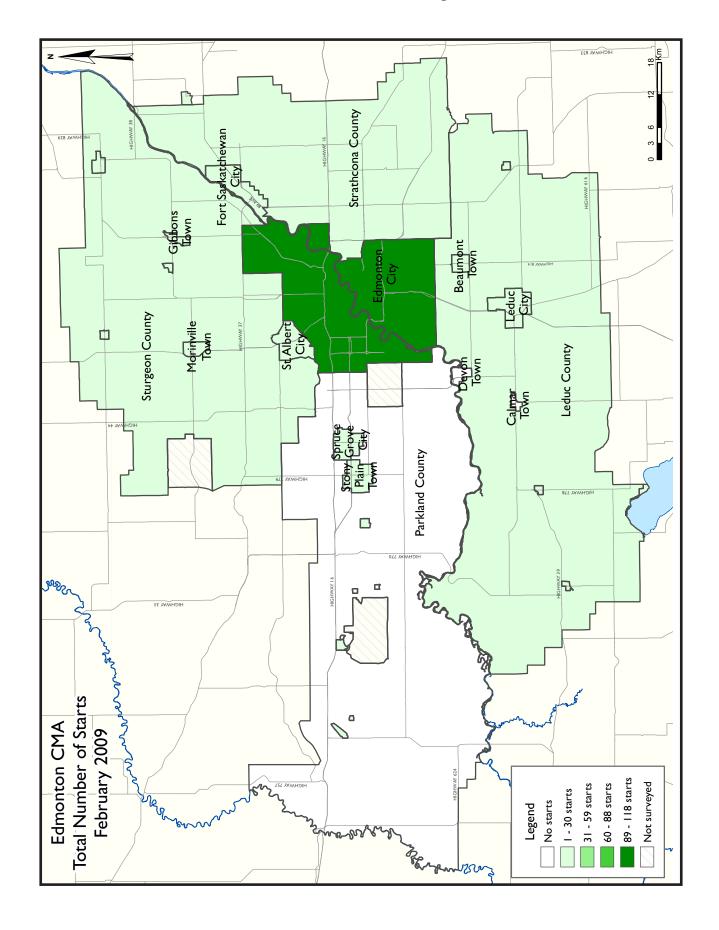

Single-detached completions decreased by nearly 51 per cent year-over-year in February to 317 units. On a year-to-date basis, completions have declined by 43 per cent and readers should expect this trend to continue in the months ahead. The slowdown in starts over the past year has reduced the number of singles under construction to 1,921 units, the lowest level since February 2002.

Despite the large reduction in completions, absorptions failed to keep pace and the unabsorbed inventory, including show homes, increased on a month-over-month basis for the first time since last August. There were 982 completed and unoccupied units across the region at the end of February, up by 16 per cent from the 849 units on hand this time last year. The average price of the 285 singles absorbed in February stood at \$574,041, up nearly 22 per cent year-over-year.

Multiple-unit starts across the Capital region totalled 64 units in February compared with 449 units started in the same month of 2008. Semidetached starts, at 46 units, were 11.5 per cent below the number started in February of last year. Row and apartment starts amounted to only 18 units, down substantially from the 397 units started in the second month of 2008.

So far this year, the number of semidetached, row, and apartment units which began construction totalled 330 units, down 76 per cent from the 1,385 multiple units tallied during January and February of last year. Developer unease over rising condominium apartment inventories will cause multi-unit starts to be lower this year than last. Provided the necessary adjustment is made this year, a gain in multi-family starts should occur in 2010.

Multiple unit completions amounted to 545 units in February, up from 389 units a year earlier. As reported in January, absorptions in February realized strong gains over February 2008, but again the number of units taken off the market was well short of completions. As such, the inventory of completed and unoccupied multiples experienced another large increase on a month-over-month basis. The total number of unabsorbed multiples stood at 766 units in February, up from 311 units this time last year and the highest level since June 2006.

### HOUSING NOW REPORT TABLES

### METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses, and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, dubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

# STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

### **DWELLING TYPES:**

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

### **INTENDED MARKET:**

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

### **GEOGRAPHICAL TERMS:**

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada's 2001 Census area definitions.

### CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
