Date Released: April 2009

## New Home Market

Fewer Housing Starts  
across Edmonton Region  
in March

Housing starts in the Edmonton Census Metropolitan Area (CMA) totalled 135 units in March, down from 478 units recorded in March 2008. To the end of the first quarter, total housing starts have amounted to

761 units throughout the Capital region compared with 2,315 units tallied during January to March of 2008.

Builders started work on 105 single-detached homes in March, representing a decrease of 49 per cent from the 205 units started in March 2008. To the end of March, 401 single-detached homes were started across Metro, down from 657 units that began construction during the first quarter of 2008. At 1,817 units,

homes under construction were down 63 per cent year-over-year and at the lowest level since June 2001. Increases in monthly starts on a year-over-year basis are not expected until much later this year and more likely in 2010.

Single-detached completions in March decreased by 64 per cent from March 2008 to 196 units. Considering the sizable downturn in the number of units under construction this spring, completions will continue to pull back as well in the coming months. Absorption rates will also be pushed downward this year as fewer homes end the construction phase. Absorptions in March declined by 49 per cent year-over-year to 253 units but managed to exceed completions and help to reduce standing inventories. The inventory of completed and unoccupied singles stood at 925 units in March, up by 2.5 per cent from the same month last year but below the peak of 1,090 units that occurred in August 2008.

The median absorbed single-detached price was \$488,000 in March, up almost four per cent from last year at this time. Monthly absorbed median price reflects homes absorbed in the month completed which is not necessarily when the price was negotiated.

Multiple dwelling starts in March also did not match the levels reported in the same month last year. Semi-detached, row, and apartment starts totalled 30 units in March, for a decline of 89 per cent from the 273

Figure 2

multi unit starts reported in March 2008. The March numbers included 16 semis, 14 rental apartments but no row units.

So far this year, multiple starts have reached 360 units across Greater Edmonton compared with 1,658 multiples that were initiated in the first three months of last year. Multiple dwelling starts are expected to remain at low levels throughout the year due to the large number of units still under construction and the strong completion levels anticipated in the months ahead.

Multiple unit completions totalled 199 units in March compared with 536 units in March of last year. Meanwhile, absorptions also dropped from levels reported in March 2008 but outpaced completions by 38 units. This allowed the unabsorbed inventory to move downward from February levels but it was nonetheless more than double the number of units in inventory at the end of March last year.

## Resale Market

### Buyer Holds Advantage in 1st Quarter

Total residential MLS® sales reported in the first three months of 2009 by the Realtors® Association of Edmonton (RAE) fell by 22 per cent from January to March 2008 to 3,185 units. This followed an 18 per cent year-over-year decline in the previous quarter. Condominium unit sales experienced the largest pull-back, falling by 28 per cent compared with the first quarter of last year.

Despite the generally slower sales activity during the first quarter, market balance has shown some moderate improvements largely due to a large reduction in new listings. Total listings in the first three months of this year decreased by 29 per cent to 8,001 units compared with 11,222 total units listed in the first quarter of 2008. As a result,

Figure 3

active listings at the end of March were 21 per cent below the same time last year. The sales-to-active listings ratio in March stood at 18.5 per cent, up from 16.5 per cent a year prior. While representing a modest gain, the supply-demand relationship in the market still favours the buyer and home prices have continued to trend downward.

The average residential resale price as reported by the RAE decreased by 10 per cent year-over-year in March to \$309,032. For the first three months of this year, the average MLS® sales price has fallen by eight per cent from January to March of last year to \$310,849. The single-detached average price decreased by almost nine per cent year-over-year in the first quarter to \$349,603. The sales-to-active listings ratios have generally been lower for condos than for singles so far this year, and prices have retrenched by a larger margin. During the first three months of this year, the average price for condos sold by members of the RAE dropped by almost 12 per cent to

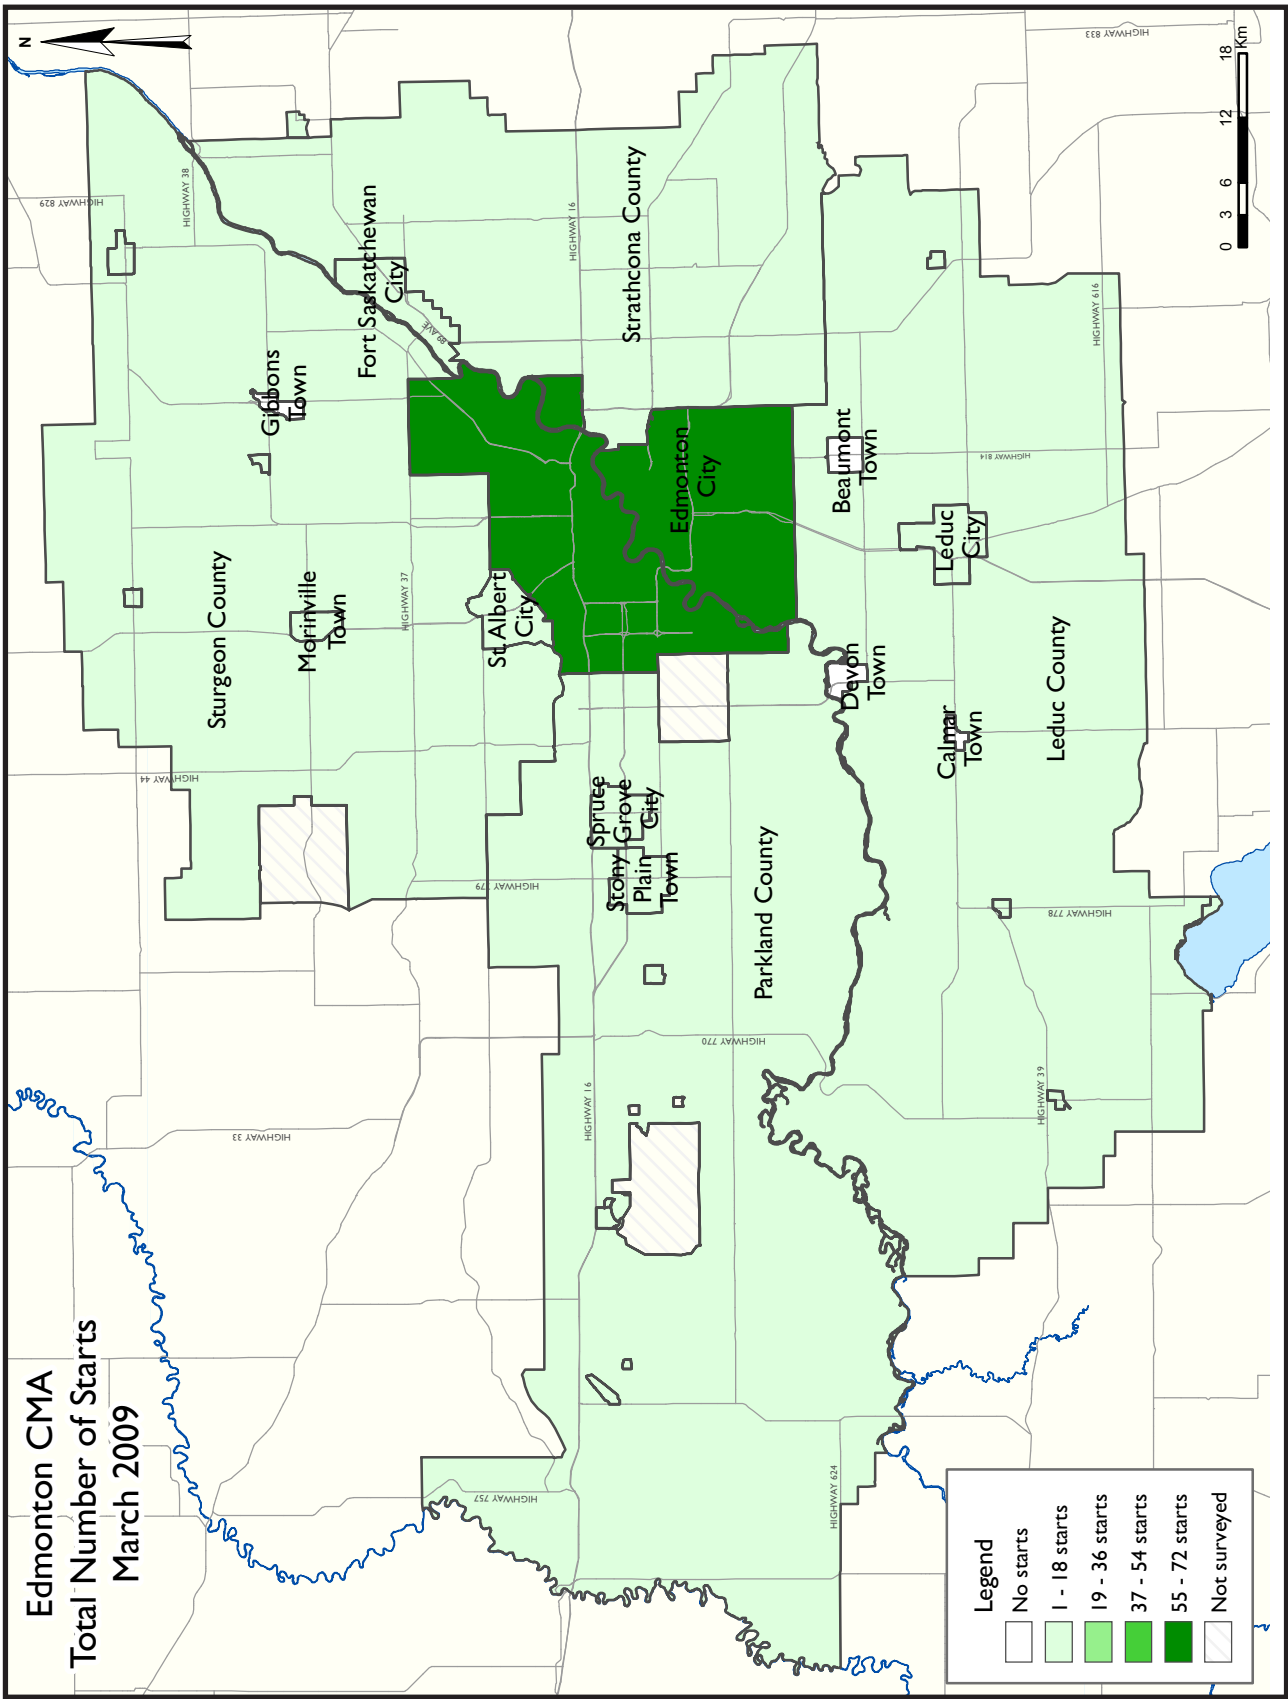

\$231,009 compared with an average of \$261,829 recorded in the first three months of 2008.

## Economy

### Labour Market Shows Signs of Softening

Following a strong performance in 2008, Edmonton's labour market is showing a softening trend in recent months. The seasonally adjusted unemployment rate stood at 4.9 per cent in March, the highest level since January 2005. Employment growth in Edmonton has largely come to a standstill in 2009 after a net gain of over 22,000 jobs last year. Income growth has also slowed according to Statistics Canada's Average Weekly Earnings data. Although the year-to-date numbers were up by just under six per cent year-over-year in the first quarter, the values peaked back in November and have been trending downward on a month-over-month basis.

Despite the softening observed in the labour market, Alberta maintained its ranking as the population growth leader during the fourth quarter of 2008. According to Statistics Canada quarterly estimates, Alberta's population growth rate in the last three months of 2008 remained the highest among all provinces thanks to strong net migration from both international and inter-provincial sources. The province gained 6,198 net migrants inter-provincially during October to December of last year, up notably from the 864 people gained on a net basis from other provinces during the same time in 2007. The inter-provincial net gain in the fourth quarter was largely due to higher net inflows from Ontario (4,778) and Quebec (1,230). Net outflows to nearby provinces such as Manitoba, Saskatchewan and British Columbia were also much lower than the volumes reported by Statistics Canada during the last three months of 2007.

## HOUSING NOW REPORT TABLES

### Available in ALL reports:

- 1 Housing Activity Summary of CMA
- 2 Starts by Submarket and by Dwelling Type – Current Month or Quarter
- 2.1 Starts by Submarket and by Dwelling Type – Year-to-Date
- 3 Completions by Submarket and by Dwelling Type – Current Month or Quarter
- 3.1 Completions by Submarket and by Dwelling Type – Year-to-Date

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes duster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
