New Home Market

Single-detached Housing Starts Increase across Edmonton Region in June

Housing starts in the Edmonton Census Metropolitan Area (CMA) totalled 450 units in June compared with 556 units in June 2008. For the year-to-date, total housing starts have amounted to 1,912 units throughout

Greater Edmonton, down from 4,140 units reported during the first half of 2008.

Single-detached starts in the Capital region totalled 268 units in June, representing a 10 per cent increase from the 244 units started in the same month last year. To the end of June, home builders started work on 1,117 single-detached homes, a decrease of 17.5 per cent from the 1,354 foundations poured during the first six months of 2008. On a

quarterly basis, however, activity improved by almost three per cent year-over-year during the second quarter. This followed a 39 per cent decline in the first quarter of 2009 compared with the first three months of 2008.

Single-detached completions totalled 266 units in June compared with 604 units in June 2008. Meanwhile, absorptions in June declined by 42 per cent year-over-year to 326 units. Despite this decrease in the number of new units drawn off the market, the industry continued to see more units absorbed than completed. Since peaking at 1,090 units in August 2008, the inventory of completed and unoccupied units (including show homes) has fallen in nine of the past 10 months. At 690 units, unabsorbed singles in June were 32 per cent below inventories tallied in June of last year and represented the lowest level since October 2007.

The median absorbed single-detached price was \$451,983 in June, down 6.4 per cent from the previous year. The monthly median price reflects homes absorbed in the current month, which is not necessarily when the price was negotiated. Statistics Canada's New House Price Index, which measures contractors' selling prices in Edmonton, was down 11.7 per cent year-over-year in May. This suggests further reductions in CMHC's absorbed median price can be anticipated in the months ahead.

Multiple unit starts, which consist of semi-detached, row, and apartment units, totalled 182 units in June, 42 per cent below the 312 multiples

Figure 2

tallied in June 2008. Both semi-detached and row starts increased year-over-year by 24 and 31 per cent, respectively. However, these gains were countered by the zero apartment starts reported in June. As was the case in April and May, all of June's multiple starts were targeted for the homeowner or condominium markets, with no rental starts reported.

With half the year completed, multiple starts have totalled 795 units, representing a 71.5 per cent decrease from the 2,786 units recorded after the first six months of 2008. Developer concerns over rising rental apartment vacancies and a growing inventory of unabsorbed new condominiums will hold down multiple unit starts for the balance of 2009.

Multiple unit completions reached 508 units in June, up by almost 10 per cent over the same month last year. Absorptions in June amounted to 387 units, down nearly seven per cent year-over-year and well below the level of completions. This resulted in a further upward move-

ment in the inventory of unabsorbed new multiples. The total number of completed and unoccupied multi-family dwellings across Metro stood at 890 units in June, nearly three times the number on hand this time last year and representing the highest level in three years.

Resale Market

Improved Market Balance in Second Quarter

Increasing sales and fewer listings have given Edmonton's existing home market a more balanced supply-demand relationship and have helped to stabilize home prices. Total residential MLS® sales reported in the second quarter of 2009 by the Realtors® Association of Edmonton (RAE) rose by 19 per cent year-over-year. This comes on the heels of a 22 per cent year-over-year decline in the previous quarter. For the year-to-date, total home sales have improved by almost two per cent compared with the first half of 2008. Single-detached home sales have out-

Figure 3

paced all other types, reporting transactions for the first half up 4.6 per cent over January to June 2008.

With fewer homes coming onto the market this year, the advantage held by buyers since late 2007 is beginning to give way to more balanced conditions. New listings in the first half of 2009 were 27.5 per cent below the same period last year. Combined with strengthening sales in the second quarter, the inventory at mid-year was 37 per cent below the 10,817 units available in June 2008. The sales-to-active listings ratio (SALR) in June stood at 37.6 per cent, up from 17.1 per cent a year prior. Meanwhile, the average listing period in June dropped below 50 days for the first time since October 2007.

With fewer homes on the market and deals closing faster, the downward trend in prices appears to be waning. While June's average sale

price of \$328,299 was still down by 3.8 per cent on a year-over-year basis, it represented the fourth month-over-month gain in average price. Should the SALR remain above the 30 per cent threshold and average listing periods remain below 50 days, CMHC anticipates continued month-over-month price gains throughout the remainder of 2009.

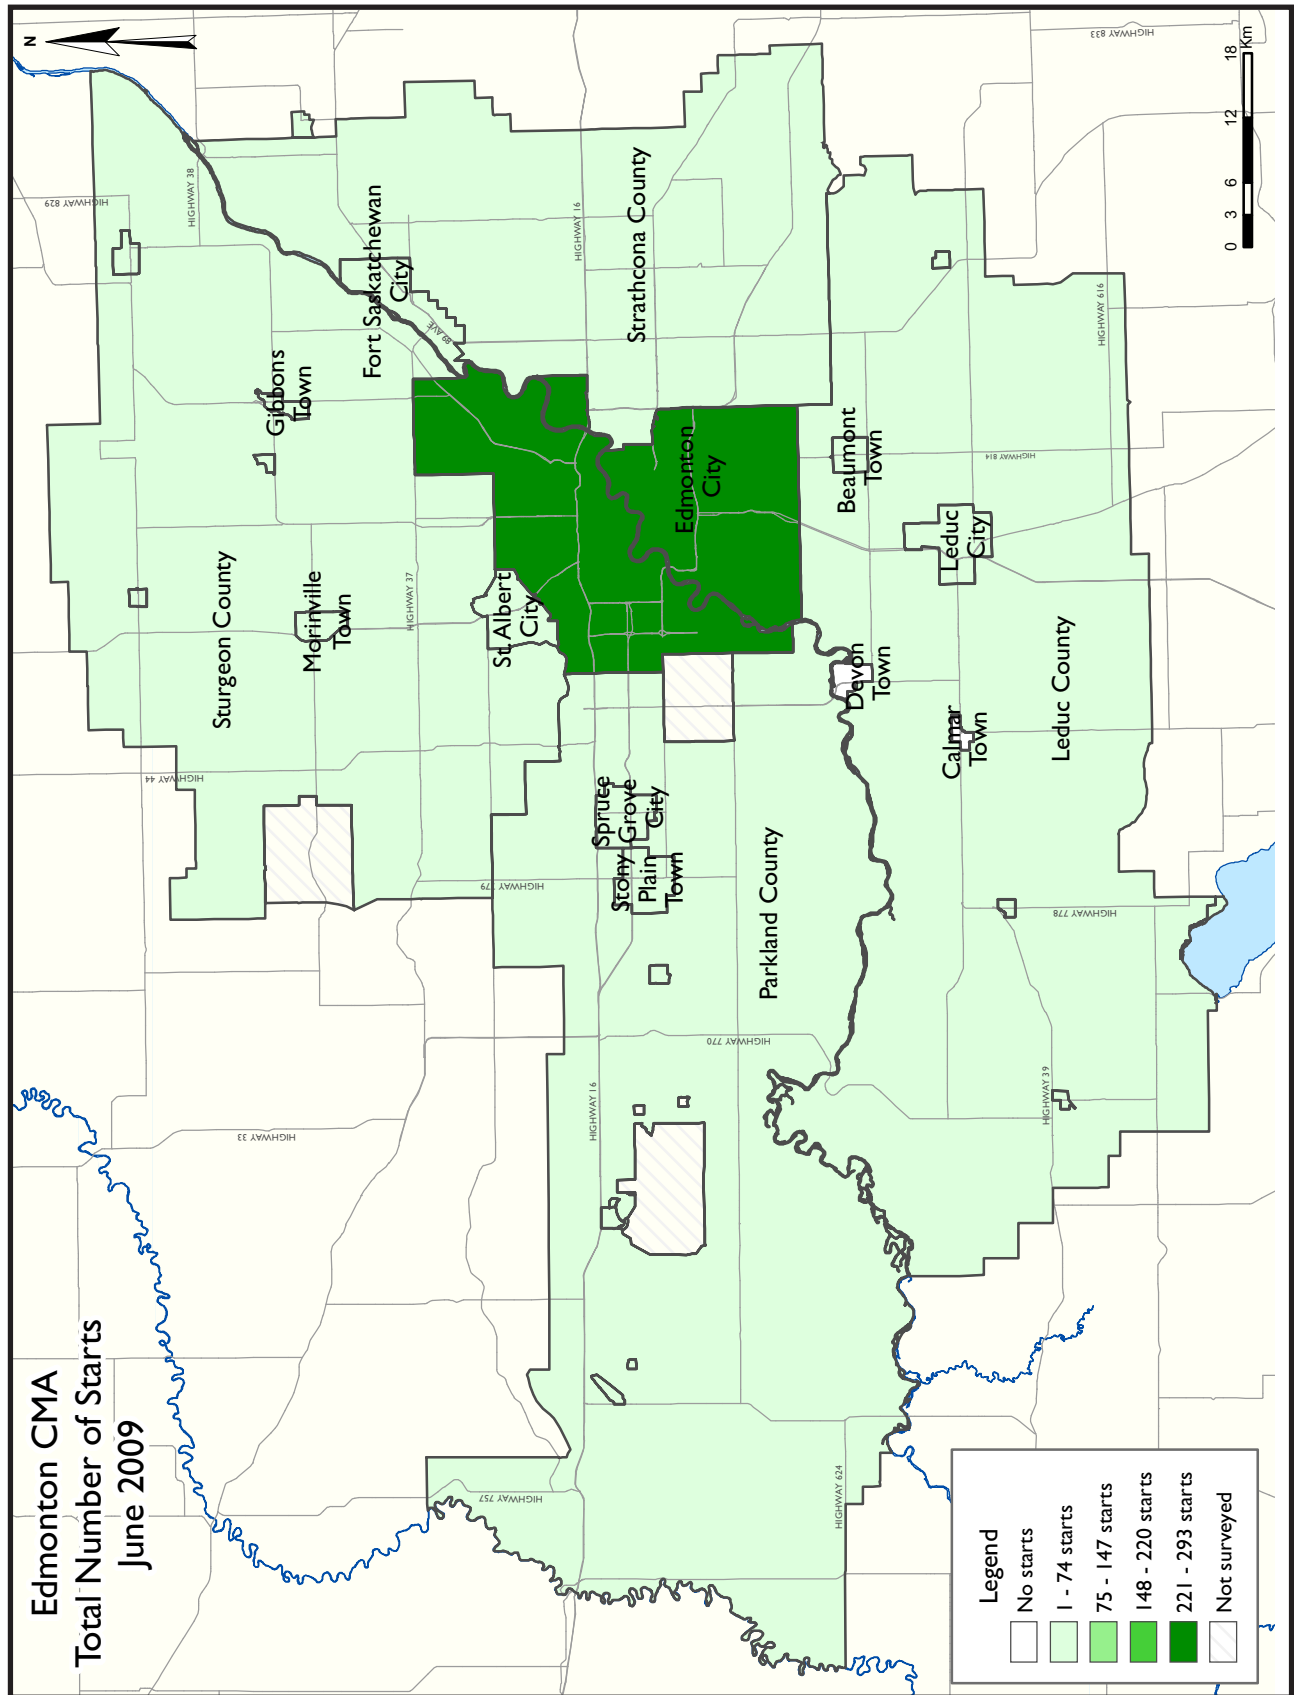

Economy

Labour Market Continues to Soften

The softer labour market conditions observed during the first quarter of this year have continued during April through June. The seasonally adjusted unemployment rate stood at 6.5 per cent in June, a level not seen since September 2000. Following a stagnant performance in the first quarter, job creation increased modestly during the second quarter. On a

year-to-date basis, however, actual employment has increased by only 0.2 per cent compared with a 4.8 per cent growth rate recorded in the first half of 2008. Despite the slowdown in job creation, income growth has held up reasonably well across Metro. According to Statistics Canada's Average Weekly Earnings data, year-to-date wages were up by almost 5.4 per cent in June, down moderately from the 6.3 per cent growth rate for all industries recorded in the first half of 2008.

While unemployment has trended upward across Alberta this year, it remains relatively lower than the rest of Canada in general and this has helped to bolster the net inflow of migrants into the province. According to Statistics Canada's population estimates, Alberta remained the fastest growing province in Canada during the first quarter of 2009, thanks in part to a substantial year-over-year improvement in interprovincial migration. The province received a net total of 7,144 interprovincial migrants in the first quarter, up from 2,761 during the same time last year. Ontario provided the largest source of net interprovincial migration at 3,546 persons. The neighbouring provinces of Saskatchewan and British Columbia, which received net inflows from Alberta last year, yielded net migrants of 474 and 855, respectively. Alberta's international migration remained strong during the first quarter, with a net inflow of 4,175 immigrants.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes duster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
