## Edmonton CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: October 2009

## New Home Market

### Edmonton's Housing Starts Increase in September

For the third month in a row, total housing starts across Greater Edmonton increased in September on a year-over-year basis. Housing starts in the Edmonton Census

Metropolitan Area (CMA) totalled 699 units in September compared with 428 units in September 2008. For the year-to-date, total housing starts have amounted to 3,620 units throughout Metro Edmonton, down one third from 5,400 units reported during the first nine months of 2008.

Single-detached starts in the Capital region totalled 481 units in September, more than double the 235 units tallied

Source: CMHC, Sept. 2009

in the same month last year and the best month for builders since October 2007. On a quarterly basis, activity improved by almost 83 per cent year-over-year during the third quarter. Despite these recent gains, units under construction in September were 18 per cent below the number underway across Metro this time last year. To the end of September, home builders started work on 2,246 single-detached homes, an increase of 14 per cent from the 1,972 units started during the first nine months of 2008. Following a weak first quarter, activity has gradually improved throughout 2009 and CMHC expects this trend to continue in the months ahead.

The inventory of unabsorbed single-detached homes remains on the downward trend that began this time last year. As shown in the accompanying chart (Figure 1), the reduced level of single starts that has occurred since the beginning of 2008 has resulted in substantial declines in completions over the past year. While absorption rates have also dropped off, they have generally outpaced completions allowing inventory levels

to subside. CMHC counted 474 completed and unoccupied singles (including show homes) across the region in September, a drop of 56 per cent from one year prior and the lowest level since July 2007.

The median price of a new single-detached home absorbed in September stood at \$476,900, down 4.6 per cent on a year-over-year basis. In the existing home market, single-detached units sold on the MLS® in September for a median price of \$349,900, which was up 1.3 per cent from September 2008.

Multiple unit starts, which consist of semi-detached, row, and apartment units, rose by 13 per cent in September to 218 units compared with 193 starts in September 2008. This represented the first year-over-year gain since May 2008. Semi-detached and row starts were both up from last September but apartment activity remained weak. So far this year, multiple dwelling starts have declined by 60 per cent to 1,374 units, down from 3,428 multiple units reported from January to September

2008. Apartment activity has seen the greatest retrenchment, falling by 83 per cent from the first nine months of 2008. Semi and row starts so far in 2009 have decreased by 14 and 15 per cent, respectively.

Following a surge in August, multiple unit completions in September again experienced sizable gains over the same month last year. Total multi-unit completions reached 805 units compared with 542 in September 2008. While absorptions also rose by a wide margin of over 26 per cent year-over-year, the number of units drawn off the market fell short of completions for the sixth consecutive month. Consequently, inventories gained another 247 units from the previous month's tally to 1,222 units, representing the highest volume of unabsorbed multiple dwellings Metro-wide since June 2005.

## Resale Market

### Market Remains Active in 3rd Quarter

Following a 19 per cent year-over-year increase in the second quarter, third quarter sales reported by the Realtors® Association of Edmonton (RAE) rose by 12 per cent over July-to-September of 2008 to 5,654 units. For the year-to-date, total home sales on the MLS® have improved by 5.3 per cent from the first nine months of 2008 to 15,395 units. While low mortgage rates remain a dominant factor, the release of demand that was pent-up during the sales slump of late 2008 and early 2009 suggests that recent upswing in activity will moderate in the months ahead.

Increased sales and reduced listings have combined to lower supply levels on Edmonton's resale market this fall. During the first nine months of 2009,

Figure 3

### Sales-to-Active Listings Ratio, Edmonton Region (MLS®) per cent (3 month moving ave.)

Source: RAE, Sept. 2009

new listings entering the market were down by almost 25 per cent from the same time last year. This summer's sales resurgence drove active listings in September down by 31 per cent from the same time in 2008. Average listing periods during the third quarter were around 23 per cent below the values reported a year prior. Meanwhile, the residential sales-to-active listings ratio averaged close to 29 per cent during the third quarter, indicative of a balanced market.

With the buyers' market giving way to more balanced conditions this spring, the extended period of month-over-month price declines that began in mid-2007 has largely subsided. Despite the gains in market balance, price movement has been muted by stronger demand from first-time buyers. For both single-detached homes and condominiums,

MLS® resale data show a stronger proportion of sales this year at entry-level price points. While resale home prices in September experienced a modest increase year-over-year, to the end of September prices were down by 4.5 per cent from the first nine months of 2008 to an average of \$320,764.

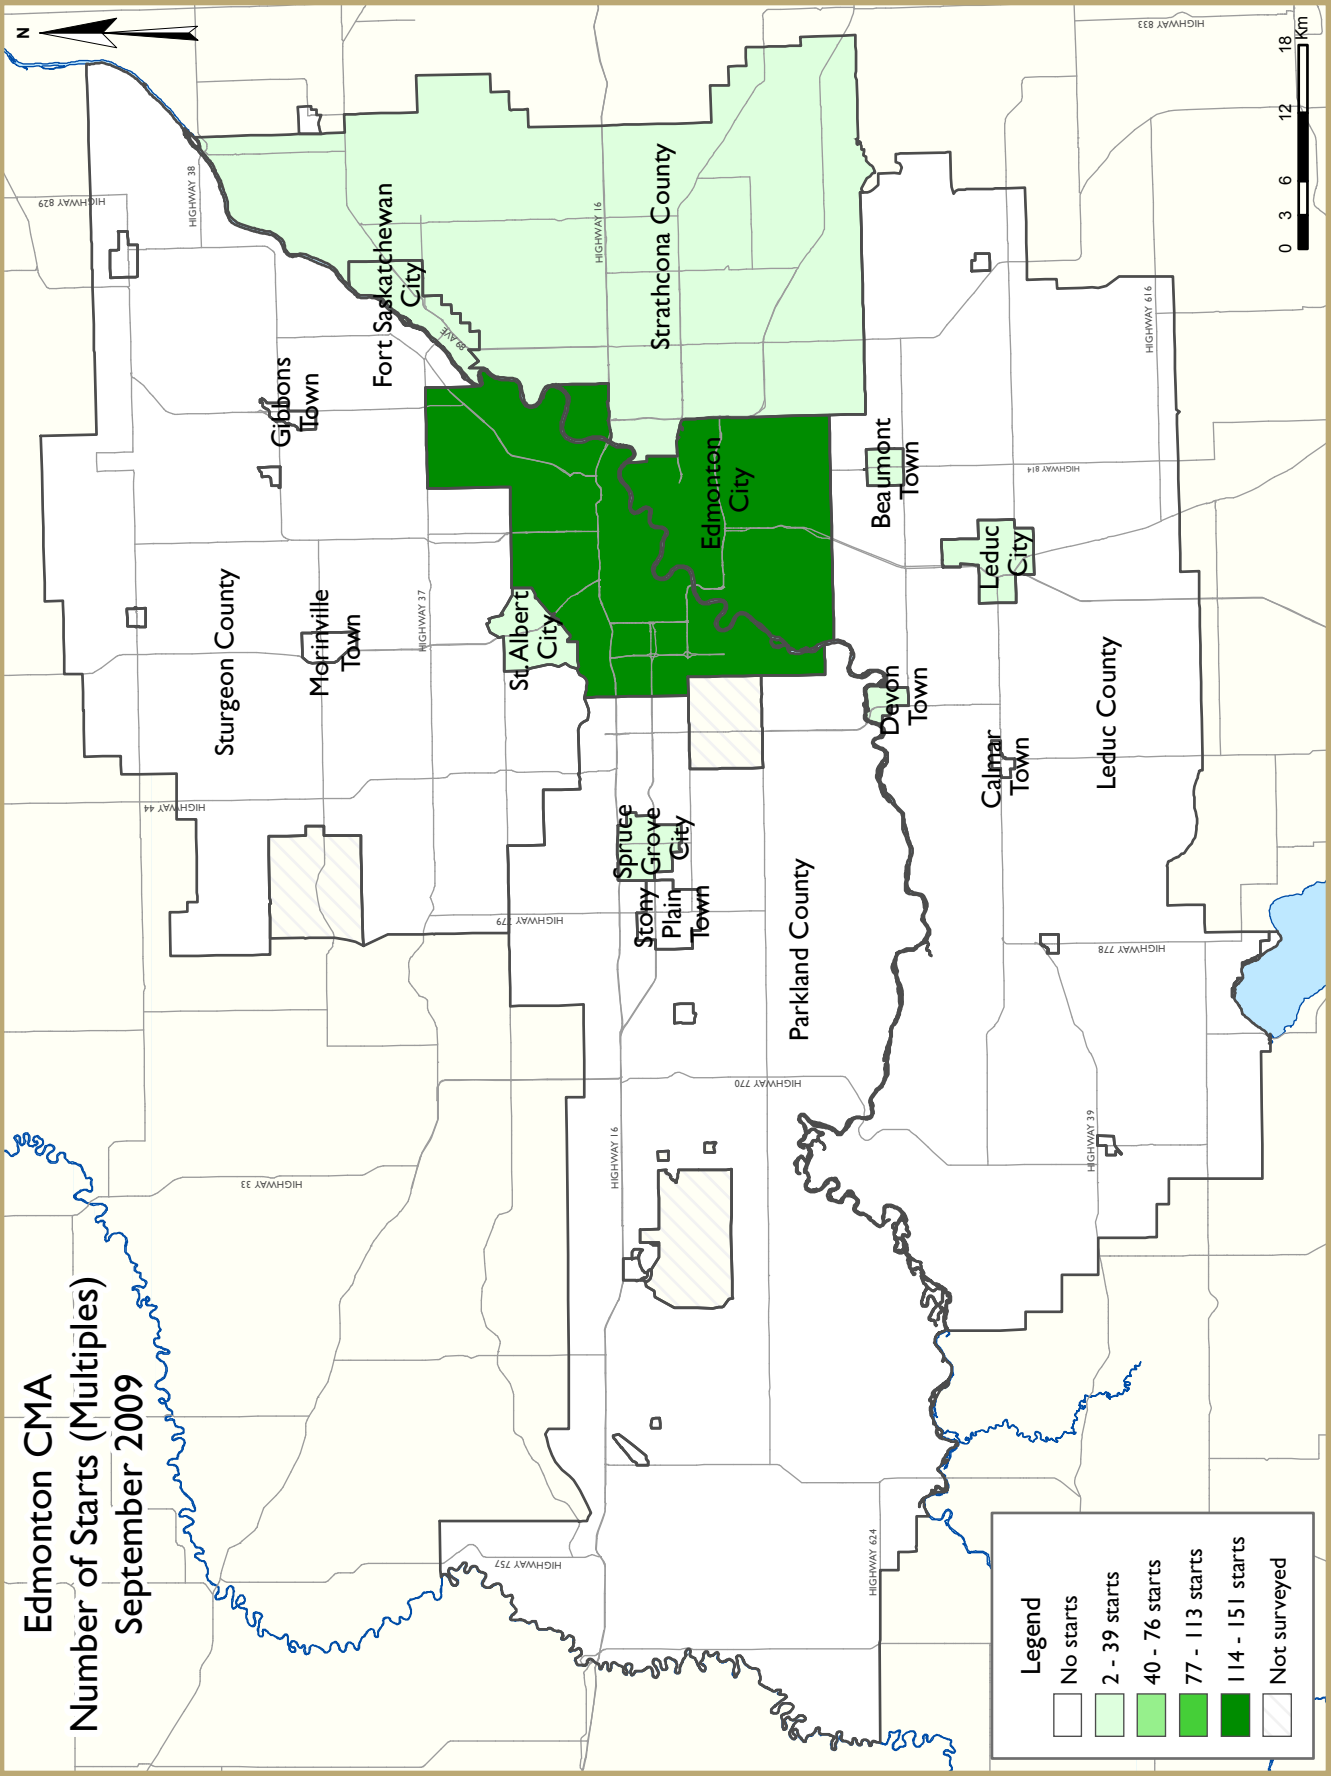

## Economy

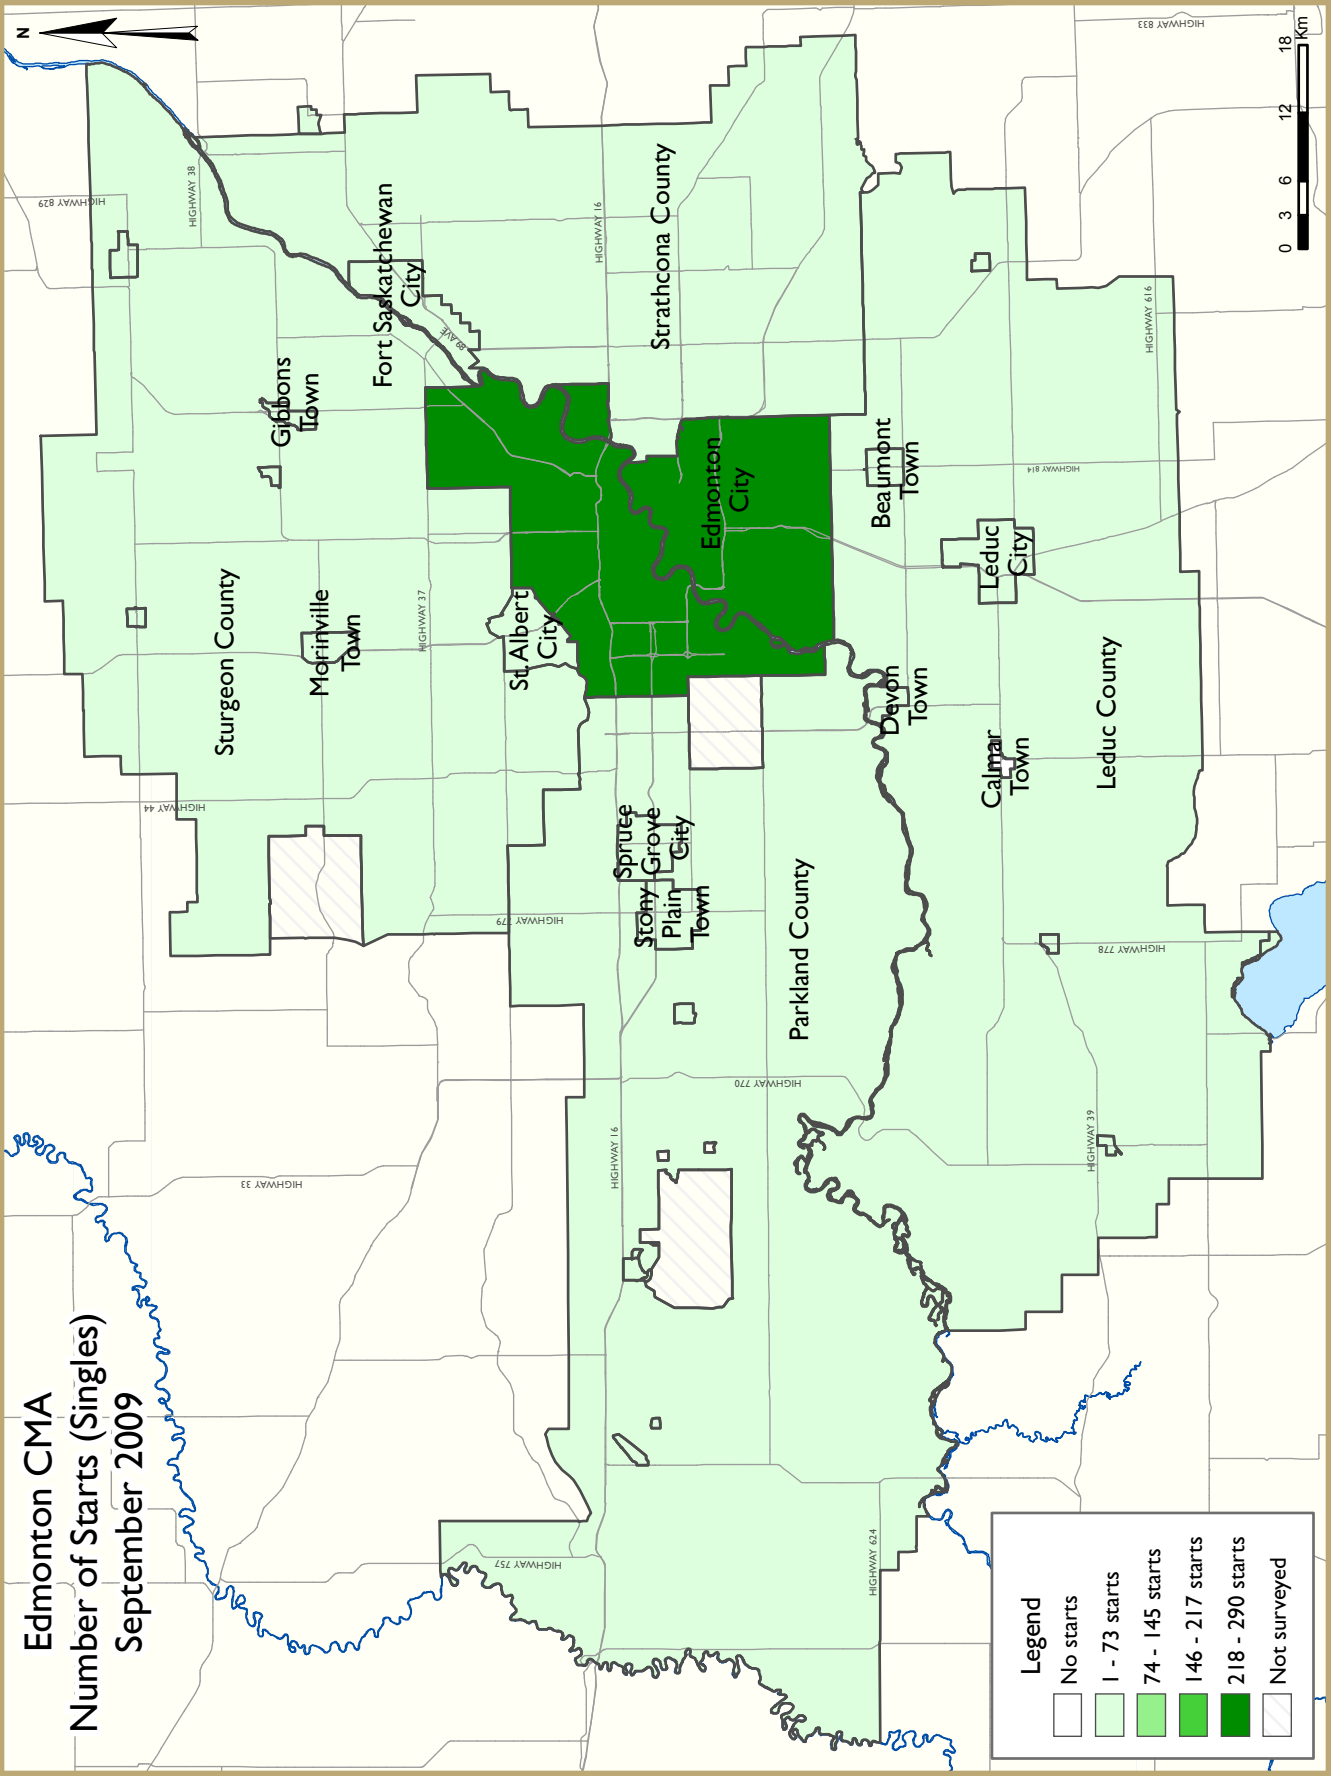

### Labour Force Growth Lifts Unemployment Rate

The weakened economy combined with continued in-migration has pushed up the seasonally adjusted unemployment rate in Edmonton to 7.4 per cent in September, its highest level since March 1997. The good news is that most of the city's increase in joblessness has come from strong

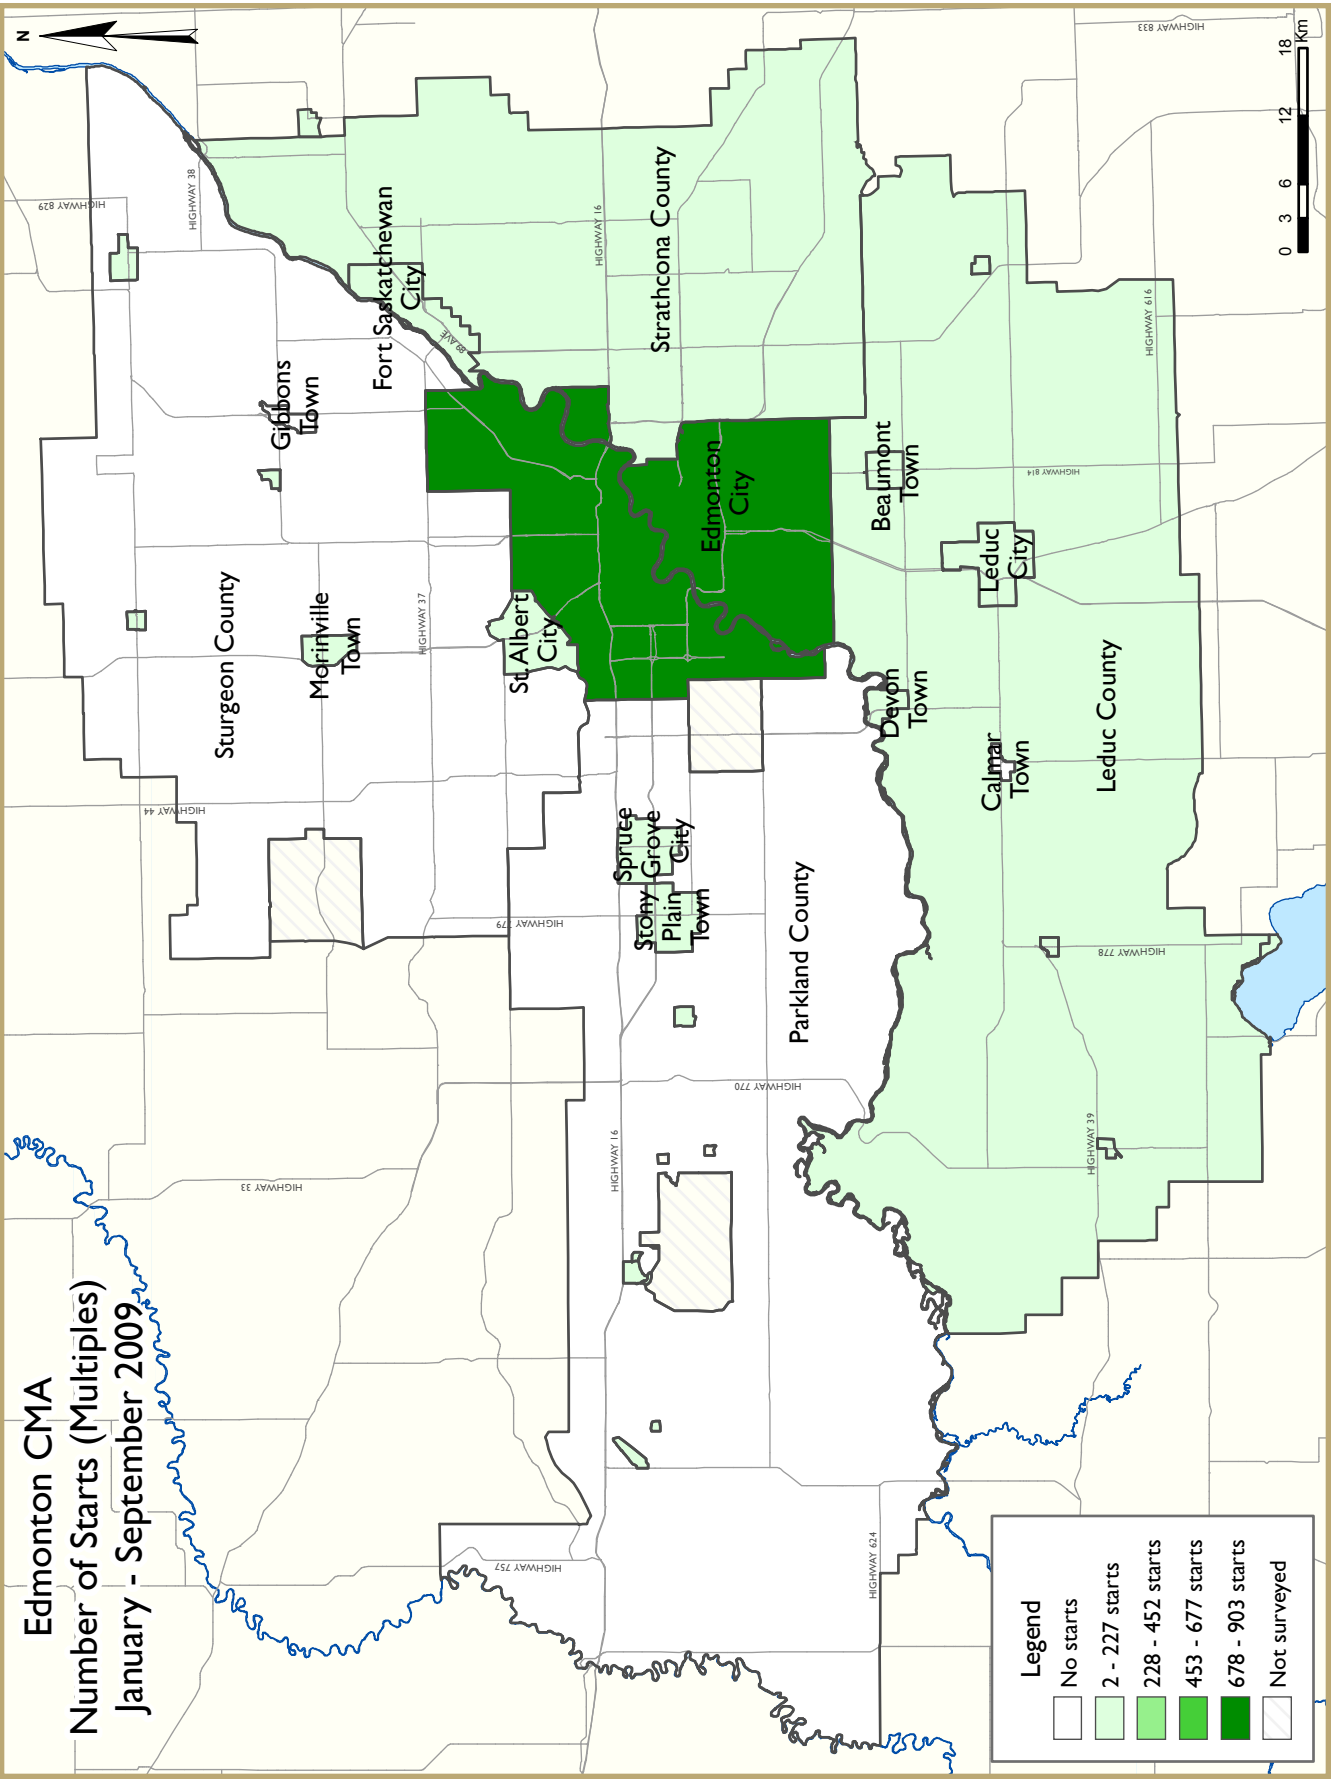

growth in the labour force, driven by in-migration, rather than losses in employment. The average number of persons employed across the region during the first nine months of 2009 was down by less than one per cent from the same time in 2008. Despite the slowdown in job creation this year and the upward trend in the jobless numbers, income levels have held up reasonably well. Average weekly earnings from the labour force survey were up by 5.2 per cent on a year-to-date basis to the end of September.

Statistics Canada's population estimates for the second quarter revealed that Alberta continues to experience strong population growth in 2009 due to high levels of net in-migration from both inter-provincial and international sources. The province's relative advantage in terms of lower-than-average unemployment rates remains a draw for newcomers from other provinces, particularly Ontario. While down from this time last year, the province still enjoys the fastest population growth rate among all Canadian provinces and these recent arrivals helped boost the demand for housing and other services. Alberta experienced a net gain of 4,737 people from other provinces in the second quarter, down from 7,215 during April to June of 2008. Meanwhile, net international migration during the second quarter remained relatively high by historic standards at 6,089, although down slightly from 6,365 for the same time last year.

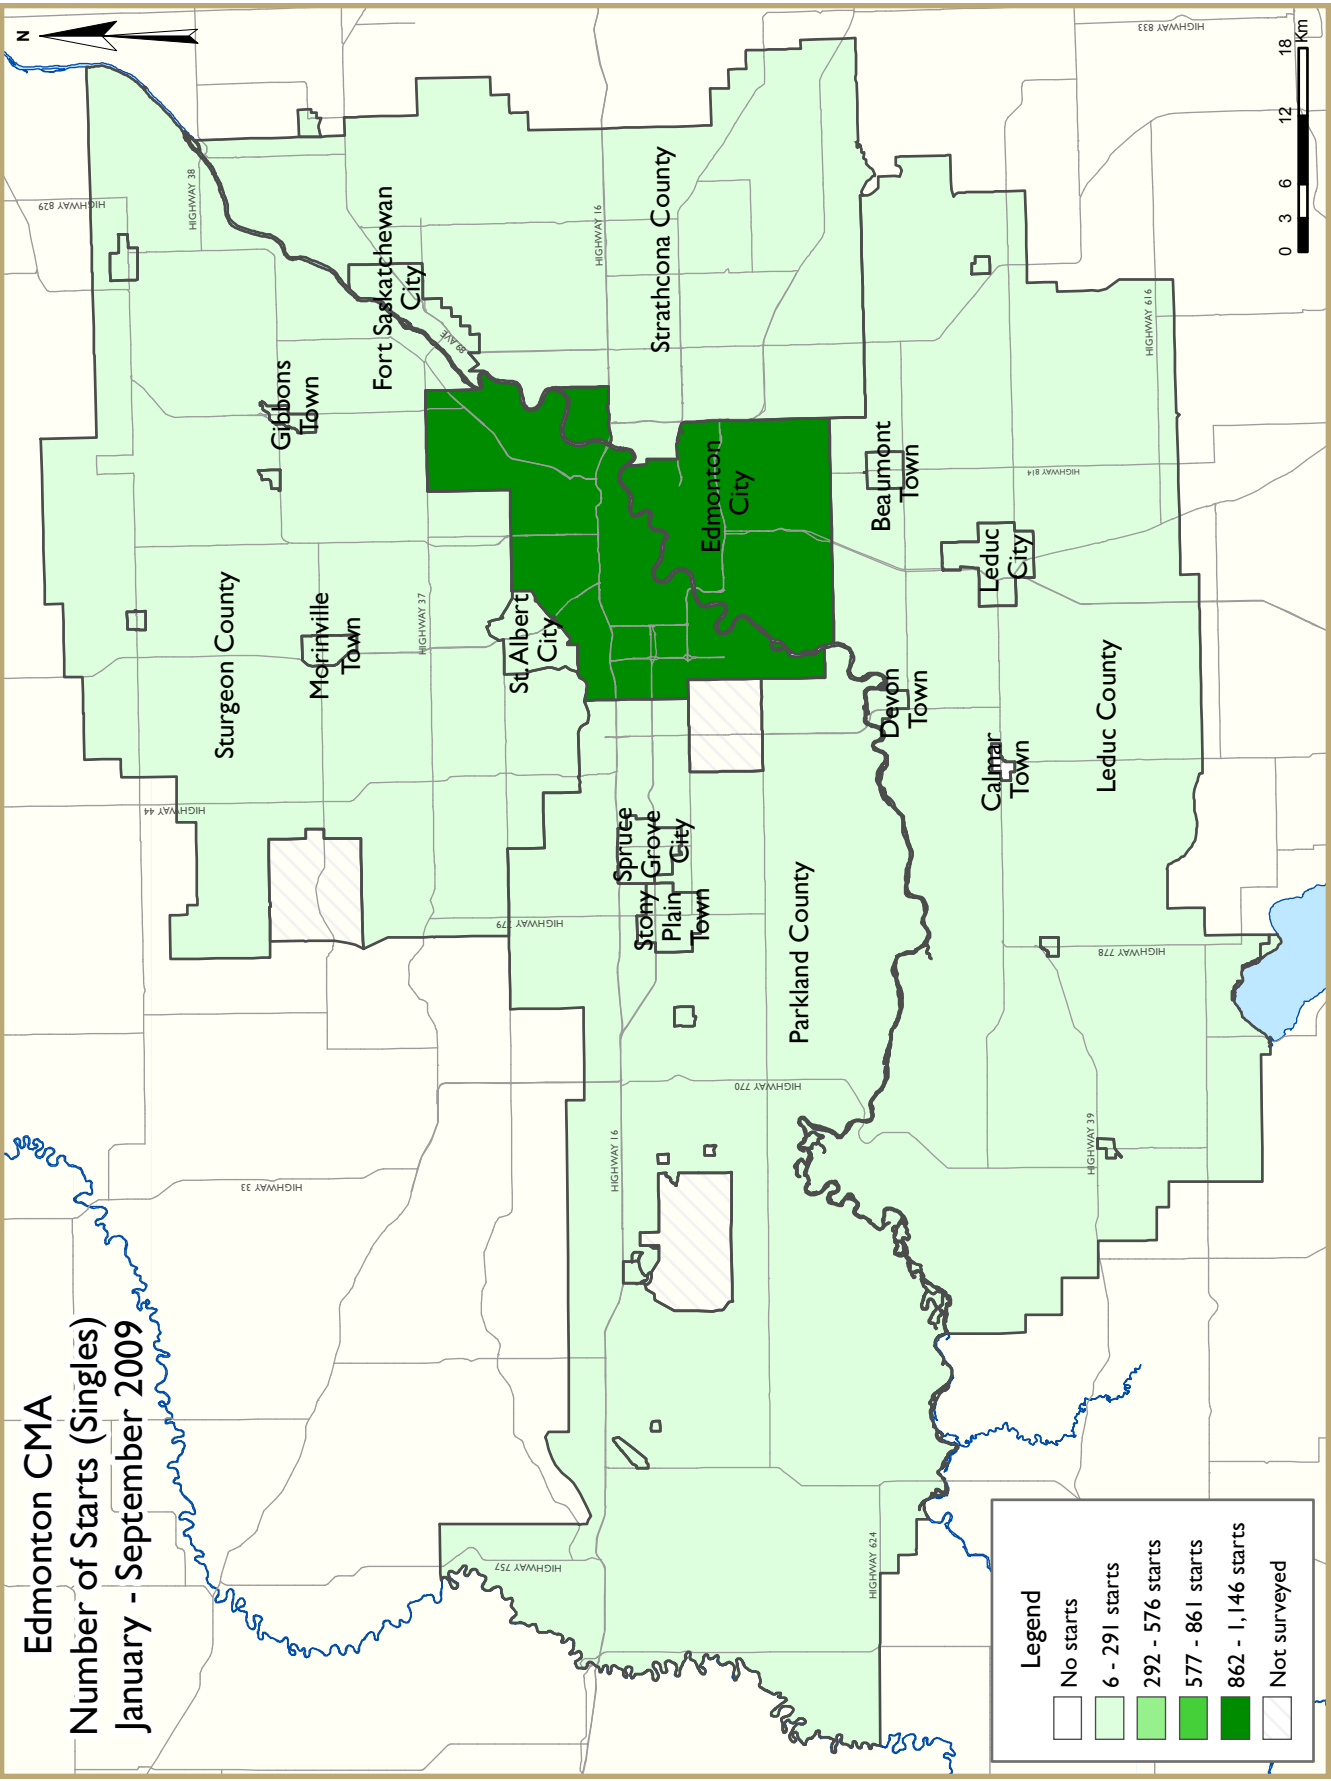

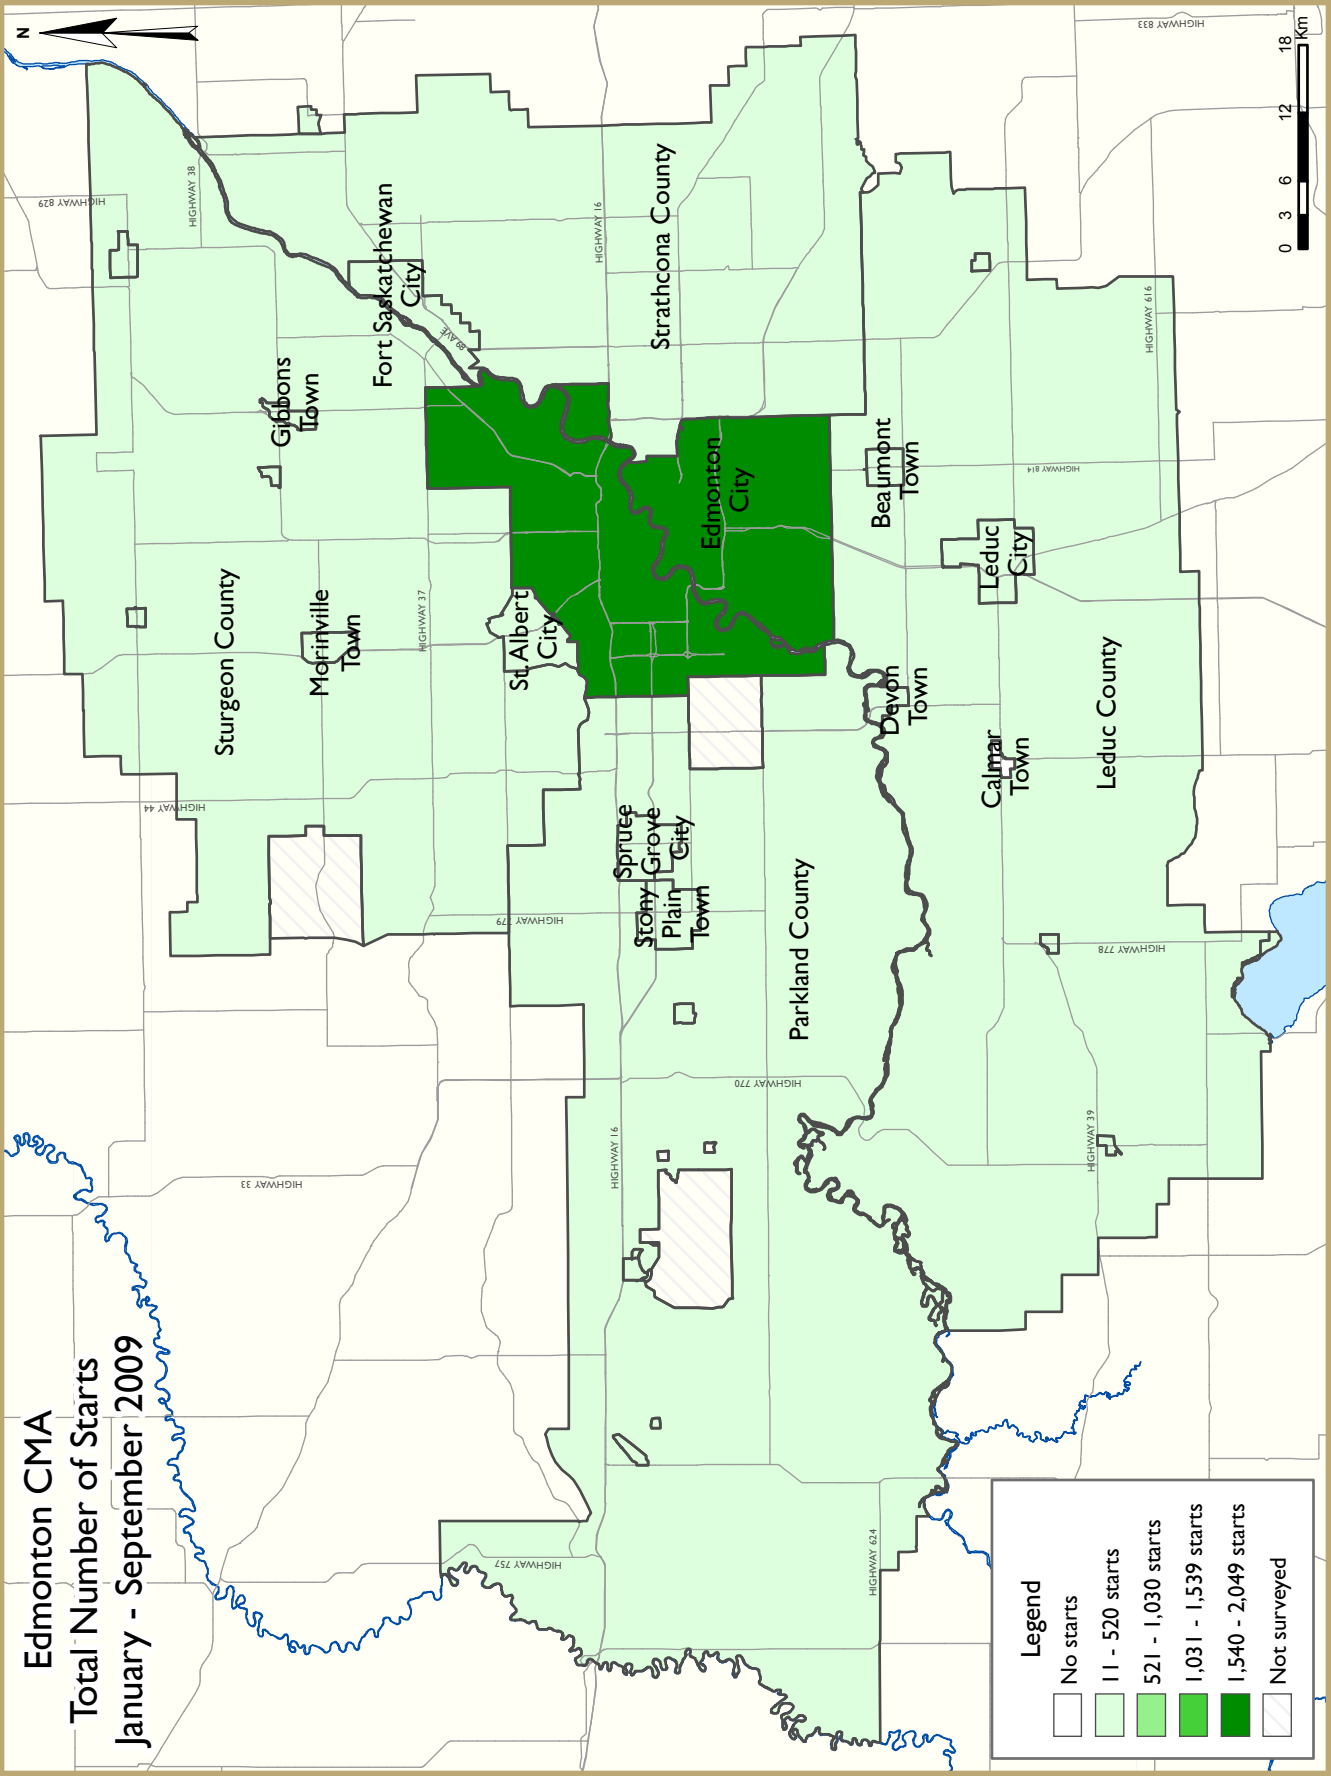

# HOUSING NOW REPORT TABLES

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
