

HOUSING NOW

Gatineau¹

Canada Mortgage and Housing Corporation

Date Released: First Quarter 2009

Gatineau area starts rise in the fourth quarter of 2008 like for the year overall

According to the latest data released by Canada Mortgage and Housing Corporation (CMHC), housing starts rose during the fourth quarter of 2008. In fact, 981 new dwellings were enumerated from October to December in the Quebec part of the Ottawa-Gatineau census metropolitan area (CMA), for a gain of 92 per cent over the same period in 2007. The results for the last quarter of 2008 brought the annual total to 3,304 starts in the area, up

by 19 per cent over the previous year. In fact, this past year, the area registered its highest level of activity since 1991.

Semi-detached homes preferred

Construction rose in both the single and multiple housing segments during the fourth quarter of 2008. However, the strong growth was

¹ Quebec part of Ottawa-Gatineau CMA

mainly attributable to multiple-family housing (semi-detached and row homes and apartments). In all, 630 new units of this type were enumerated this past quarter, compared to 246 during the same period in 2007, up more than two-fold year-over-year. Semi-detached homes accounted for many of the new units, as four out of ten multiple housing starts were of this type. The share of apartments was also significant in the fourth quarter (43 per cent), with new units divided equally between the rental and condominium markets. In the single-detached home segment, the increase was less significant than in the multiple home segment, but not negligible (+32 per cent). Housing starts reached 351 units in the fourth quarter of 2008, compared to 266 during the same quarter in 2007.

The annual starts total followed a similar trend, with gains of 8 per cent in the single-detached home segment and 25 per cent in the multiple-unit housing segment. In 2008, the residential construction sector will have benefited from the booming job market in Canada's Capital Region. As well, the growth in prices registered in recent years will have contributed to shifting demand toward more affordable housing types, such as semi-detached homes and condominiums.

Aylmer still registering more housing starts

In the fourth quarter, housing starts increased more significantly in Aylmer than elsewhere in the metropolitan area, reaching 554 units, compared to 249 during the

Figure 2

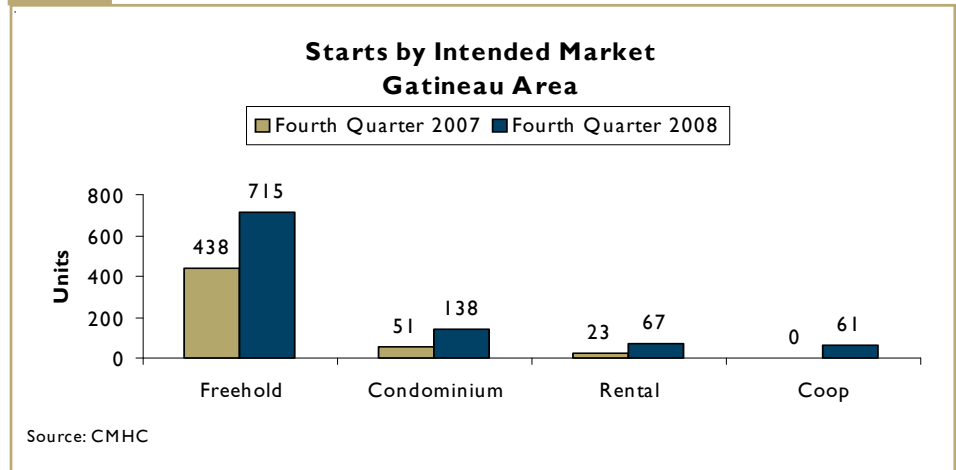

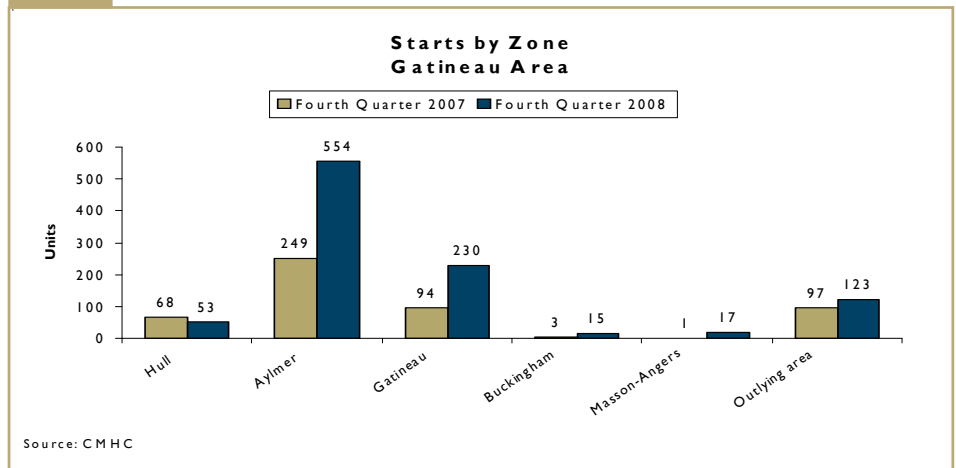

Figure 3

same period in 2007—a gain of 122 per cent. In the Gatineau sector, as well, construction rose this past quarter over a year earlier (230 units, versus 94 in 2007), but the starts volume remained below the average for the last five years (323 units). In Hull, where buildable lots are increasingly scarce, new home construction fell slightly in the fourth quarter (-22 per cent).

Aylmer was the only one of the three larger sectors of the

metropolitan area that posted an increase in total starts in 2008. In all, there were 1,686 starts, in comparison with 1,105 a year earlier, for a gain of 53 per cent. In the Gatineau and Hull sectors, construction, which had fallen in 2007, declined again in 2008, by 4 per cent and 45 per cent, respectively. In Buckingham and Masson-Angers, starts rose during 2008, reaching a total of 161 units—a level more than three times the number recorded in 2007.

Resale market moderates in the fourth quarter of 2008 contrary to the new home market

The last quarter of 2008 was marked by a significant decrease in resale market activity. Only 612 transactions were registered through the Multiple Listing Service® (MLS®) during this period, compared to 857 a year earlier, for a drop of 28 per cent. This represents the weakest fourth-quarter result since 2000. Compared to 2007, resale home demand dropped by 9 per cent in the area. The strong sales volume in 2007 and the financial instability that arrived at the end of the year explained the smaller number of properties that changed hands on the Gatineau market in 2008.

In addition to the decrease in demand in the last quarter of 2008, another factor led to a greater supply of properties for sale in the Gatineau area: the higher number of new listings. In fact, active listings increased by 8 per cent year-over-year in the fourth quarter. This growing gap between supply and demand led to a rise in the seller-to-buyer ratio, which reached 10 to 1 in the fourth quarter. Overall in 2008, the seller-to-buyer ratio also increased but, as the situation was very different at the beginning of the year, the 12-month ratio is only 6 to 1. A market is considered balanced when the ratio is between 8 and 10 sellers per buyer. A ratio below 8 to 1 signifies a seller's market, while a ratio of 11 to 1 or above indicates a buyer's market. In the last quarter of 2008, the Gatineau area saw a shift from a seller's market to a balanced

market, which eased the upward pressure on prices.

Since 2008 was generally favourable to sellers, the average selling price continued to increase, rising from \$185,693 in 2007 to \$194,873 in 2008 (+4.9 per cent). In addition, softening demand and increasing supply in the fourth quarter resulted in the first drop in the average price since 1997. In fact, the average price of properties sold between October and December 2008 decreased by 1 per cent compared to the same period in 2007. But this decrease was also due to a significant decline in the share of single-detached homes sold—usually more expensive—in favour of other housing types (semi-detached, row and condominium units).

Demand for single-detached homes drops the most

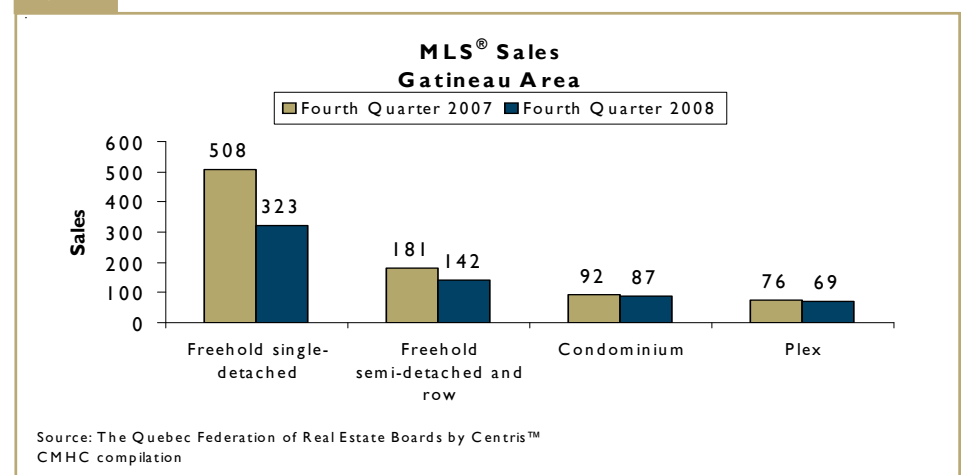

At the beginning of 2008, single-detached home sales were down only slightly from a year earlier. However, the year-over-year

decrease grew in the fourth quarter, to 36 per cent. Sales also declined in the other market segments, but not to the same extent. In fact, semi-detached and row home transactions dropped by 22 per cent, while plex and condominium sales fell by only 9 per cent and 5 per cent, respectively.

The recent decrease in demand for single-detached homes created a new dynamic in the regional market. While conditions continued to favour sellers in 2008, the fourth-quarter results show that, in this segment, the seller-to-buyer ratio reached 13 to 1, compared to 7 to 1 in the fourth quarter of 2007. The ratios also increased in the other segments, reaching 12 to 1 in the condominium segment, but only 6 to 1 in the semi-detached and row home segment. The large rise in prices observed in recent years will therefore have had a greater negative impact on demand for generally more expensive homes.

This trend was also reflected in the average prices, which climbed in all market segments between 2007 and

Figure 4

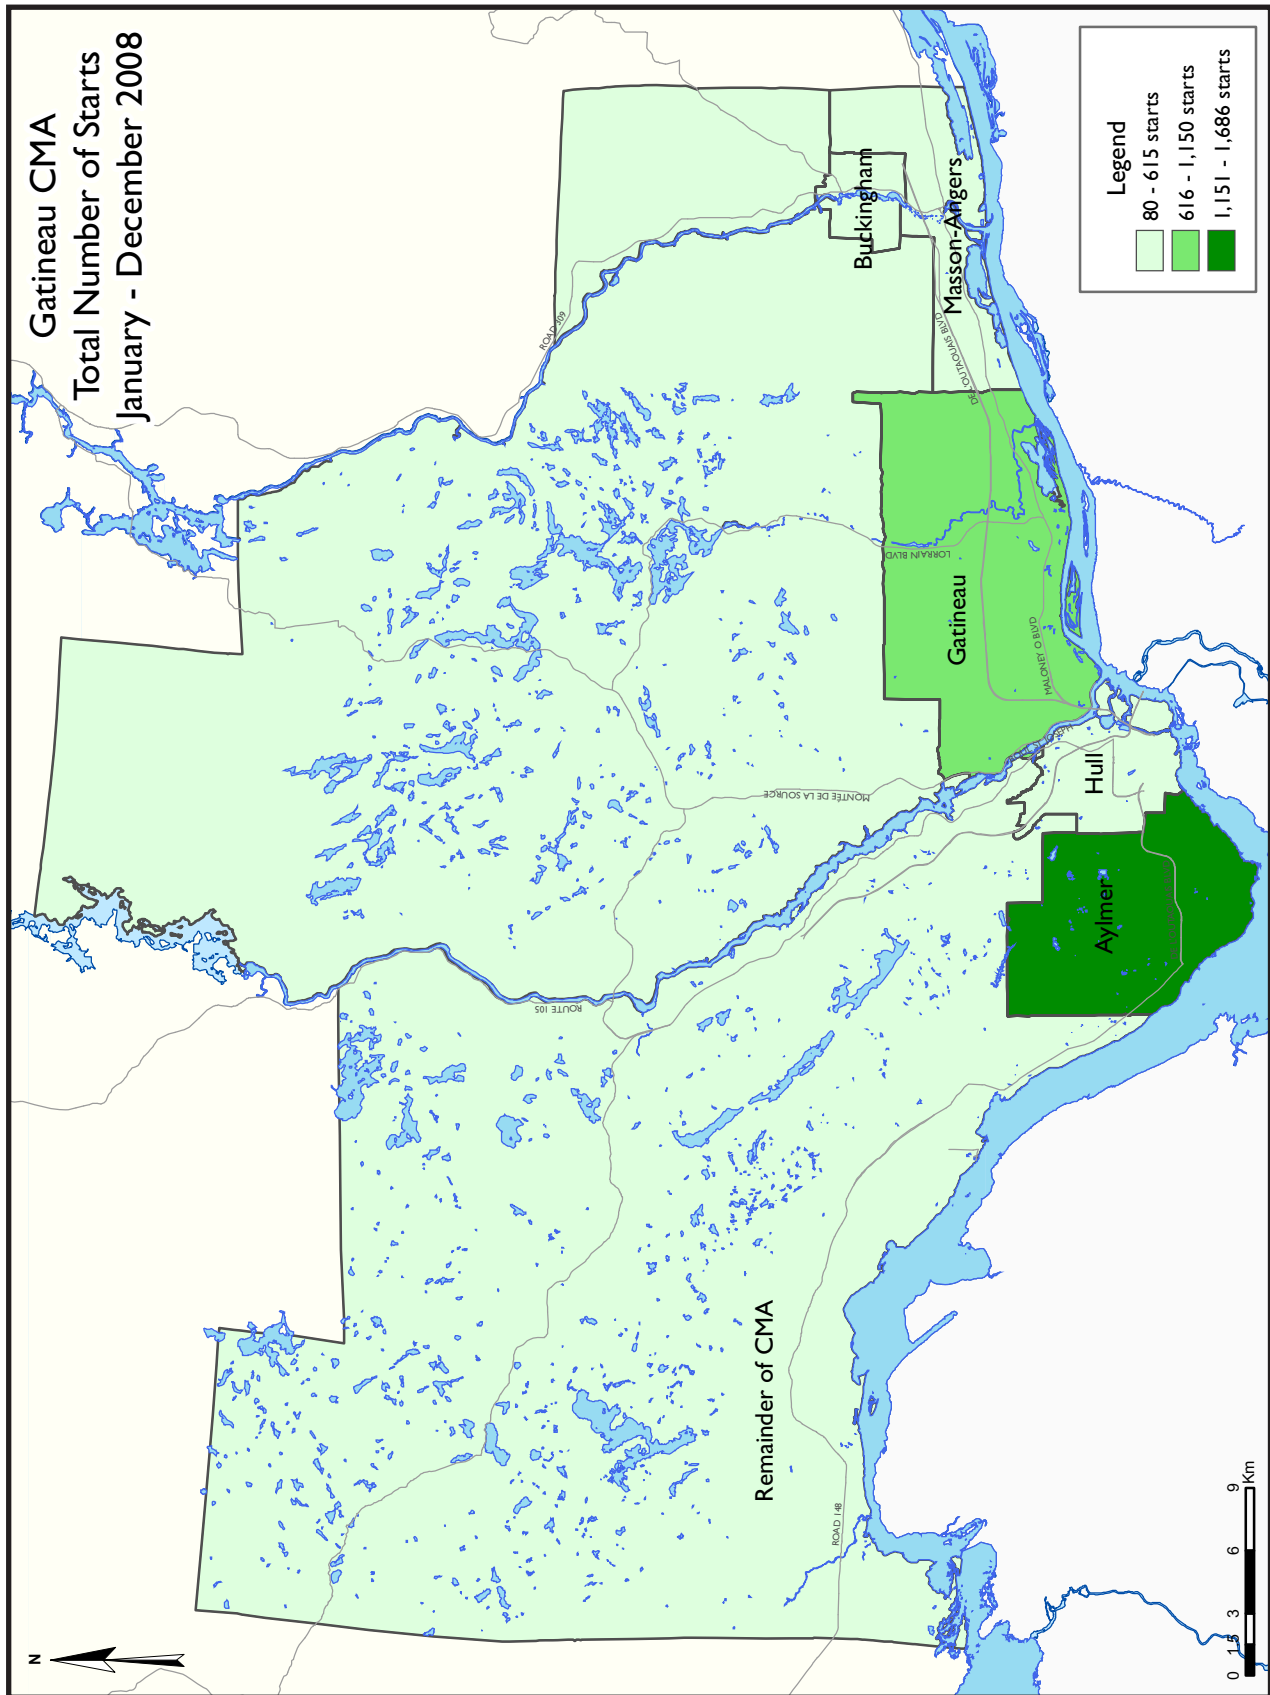

2008. However, in the fourth quarter, the average price of single-detached houses decreased by 1 per cent year-over-year. In the more affordable housing segments (semi-detached and row houses, as well as condominiums), the average prices continued to rise during this period. In the plex segment, given the heterogeneity of the units and the small number of transactions, we cannot identify any trend.

Sales decrease in all sectors

There were no exceptions: sales of existing properties fell everywhere across the area. The most significant drops were observed in the outlying sectors. In fact, Buckingham sustained a decline of 45 per cent, and Masson and the outlying area recorded drops of about 33 per cent. In the central sectors, Aylmer registered the smallest decrease in sales (-14 per cent), followed by Gatineau (25 per cent) and Hull

(-30 per cent). While the declines were more significant in these last two sectors, there were still more sales in these zones than in Aylmer.

In 2008, all sectors of the metropolitan area registered fewer sales than in 2007, except Aylmer, where transactions increased by 9 per cent. The biggest drop was observed in the outlying area, at 19 per cent. However, decreasing sales did not prevent average prices from rising faster than inflation. The smallest price increase was observed in the Hull sector (+3 per cent), and the largest, at almost 6 per cent, in the Gatineau sector. In the outlying area, despite a significant decrease in sales in 2008, the average price climbed by more than 4 per cent compared to 2007. A closer look, though, reveals that, in the fourth quarter of 2008, the average prices fell in all sectors, except Gatineau (+1.4 per cent).

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A **“dwelling unit”**, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A **“start”**, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units **“under construction”** as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A **“completion”**, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term **“absorbed”** means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.

For more information, visit our website at www.cmhc.ca

You can also reach us by phone at 1-800-668-2642 or by fax at 1-800-245-9274.
Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is available for free on CMHC's website. You can view, print, download or subscribe to future editions and get market information e-mailed automatically to you the same day it is released. It's quick and convenient!
