

RENTAL MARKET REPORT

Vancouver and Abbotsford CMAs

CANADA MORTGAGE AND HOUSING CORPORATION

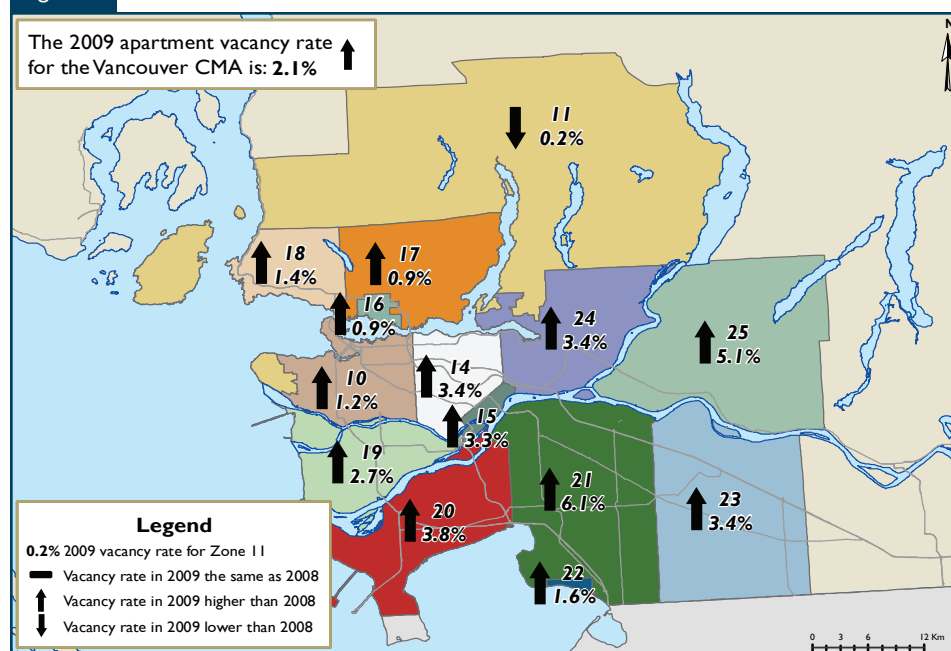

Date Released: Fall 2009

Highlights

Rental Market Conditions Ease

- The rental apartment vacancy rate in Vancouver increased to 2.1 per cent, following several years of vacancies below one per cent.
- Same sample apartment rents¹ increased, but at a slower pace than last year.
- The stock of purpose-built² rental apartments and town homes grew by more than one thousand units.
- The stock of rental condominiums grew, while the number of other types of secondary rental units declined.
- The rental condominium vacancy rate increased to 1.7 per cent.

Figure 1

¹ CMHC compares rents from a common sample to determine market movement. This sample does not contain new units added to the rental stock in the past year.

² The purpose-built rental market refers to apartment and townhouse units that are built as rental units.

More Rental Units Vacant and Available

Renters had an easier time finding rental accommodation in Vancouver this fall, compared to last year. Higher rental apartment vacancy rates have meant that renters have more choice. Although higher than last year, Vancouver's vacancy rate is still below the national average and among the lowest in the country.

A slowdown in employment sent Vancouver's rental apartment vacancy rate higher in 2009. The vacancy rate increased to 2.1 per cent, after sitting below one per cent for three consecutive years. Unemployment in the Vancouver Census Metropolitan Area (CMA) for the first ten months of 2009 increased to seven per cent from 4.3 per cent for the same period last year. Although employment has been gradually improving since the spring of this year, it has only been in the last couple months that full-time employment has grown.

A shift to homeownership also contributed to higher rental vacancy rates in 2009. A combination of low mortgage rates and home prices off their peak value has meant that monthly mortgage payments are lower. As of September 2009, the average monthly mortgage payment for an apartment condominium was approximately ten per cent less than it was one year ago³. Although the average mortgage payment is still higher than the average monthly rental payment, some renters have chosen to take this opportunity to enter homeownership.

Figure 2

Virtually all communities in the Metro Vancouver area saw an increase in vacancies in 2009. The only exception to this was the University Endowment Lands (UEL). The vacancy rate in the UEL, along with several areas of Vancouver City and North Vancouver, remained tight, below one per cent in October 2009. Vancouver City, with its educational infrastructure and job opportunities in the business centre, and the lifestyle communities of West Vancouver and White Rock recorded vacancy rates just over one per cent. Vacancies increased in all other municipalities, with suburban communities north of the Fraser River near three per cent, and communities south of the Fraser, in the 4-6 per cent range.

The rental availability rate⁴ for private rental apartments moved higher in 2009. The availability rate increased to 2.8 per cent in October 2009, from 1.1 per cent a year earlier.

The vacancy rate for investor-owned rental condominiums increased in 2009, but to a lesser extent than that for purpose-built rental units. The rental condominium vacancy rate moved up to 1.7 per cent from 0.6 per cent last fall. The stock of rental condominiums is generally newer and features more amenities than their purpose-built rental counterparts. These benefits shored up demand for rental condominiums.

Rental Stock Grows

An increased stock of purpose-built rental apartments and investor-owned rental condominiums contributed to higher vacancy rates in 2009. The stock of purpose-built rental accommodation in Vancouver grew by 1,060 units, or one per cent, with the majority of these being apartment units. Approximately four-fifths of these new apartments are new units that were completed over the past

³ Sources: REBGV, Bank of Canada, Statistics Canada, CMHC. *2008\$ real seasonally adjusted mortgage payments on an average priced apartment condominium, P & I, 25% down payment, 25 year amortization, Bank of Canada 3 Year mortgage rate, compounded semi-annually.

⁴ The availability rate reflects vacant units as well as those for which notice has been given to vacate the unit (by either the landlord or tenant).

Figure 3

Rental Conditions Ease

Rental Apartment Vacancy Rate

Source: CMHC Rental Market Survey, Oct 2009

year. The remainder are units that were not included in last year's survey because they were being renovated, and were added back in this year. More than 5,000 additional investor-owned rental condominiums added to the stock of rental housing over the past year, helping to offset the decline in other types of secondary rental units⁵.

Rents Increase at a Modest Pace

Higher vacancy rates across Vancouver limited rent growth in 2009. Rents moved higher, but at a slower pace than in previous years. Same sample average apartment rents increased an estimated 2.9 per cent this year, compared to a 4.3 per cent increase in 2008. Although this is a smaller increase, it is above the rate of inflation for Vancouver, which has been sitting just above one percent through 2009. With the exception of a few pockets within the City of Vancouver,

all areas saw smaller increases in rents this year than last.

The low level of new purpose built rental apartment construction in Vancouver over the past few years has meant that the stock of purpose-built rental housing is older than the stock of rental condominiums. Condominium rentals often provide more amenities and features than purpose-built rentals. As a result, condominium rents were twenty to forty per cent higher than apartment rents. However, the difference in rents between the two types of accommodation has shrunk because some areas of the region had lower average condominium rents this year than last. Last year, condominium rents were forty to fifty per cent higher than their rental apartment counterparts.

Rental Demand Will Increase

Several factors will support demand for rental housing in 2010. The Olympics will provide a short-term jolt to the market. A post-Olympics temporary spike in unemployment may lead to a temporary increase in vacancies. However the fundamentals will support rental demand through 2010.

An improving economy and more jobs are forecast for the year ahead. Continued growth in full-time jobs will support rental demand and keep vacancy rates close to this year's.

Although the movement of renters into homeownership will continue, the lower cost of rental accommodation will keep many renters where they are. For example, even when the average monthly condominium mortgage payment was at its lowest point in the spring of this year, it was approximately \$300 higher than the average two-bedroom apartment rent. With condominium prices rising again and mortgage rates slated to increase, albeit modestly, over the next year, the gap between the cost to rent and the cost to own will widen, making homeownership less attractive to some would-be first-time buyers.

Steady population growth in the year ahead will sustain demand for rental housing. The 40,000 people predicted to move to Vancouver over the next year will form an estimated 16,000 new households. Approximately one-third of these will be new rental households in need of accommodation.

⁵ The secondary rental market includes individual investor-owned houses, duplexes, town homes, and accessory suites.

Rental Affordability Indicator

The rental affordability indicator is a gauge of how affordable a rental market is for renter households in that market. A generally accepted rule of thumb for affordability is that a household should spend less than 30 per cent of its gross income on housing. The rental affordability indicator examines a three-year moving average of median income of renter households and compares it to the median rent for a two-bedroom apartment in that centre. More specifically, the level of income required for a household to rent a median priced two-bedroom apartment, using 30 per cent of its income, is calculated. The three-year moving average of median income of households in a centre is then divided by this required income. The resulting number is then multiplied by 100 to form the indicator. An indicator value of 100 indicates that 30 per cent of the median income of renter households is necessary to rent a two-bedroom apartment going at the median rental rate. A value above 100 indicates that less than 30 per cent of the median income is required to rent a two-bedroom apartment, conversely, a value below 100 indicates that more than 30 per cent of the median income is required to rent the same unit. In general, as the indicator increases, the market becomes more affordable; as the indicator declines, the market becomes less affordable.

The rental affordability indicator in Vancouver stood at 98 for 2009, a decline from last year's value of 99. This reflects a slight erosion in affordability in Vancouver's purpose-built rental market. According to CMHC's new rental affordability

Figure 4

Figure 5

indicator, the cost of renting a median priced two-bedroom apartment increased by five per cent in 2009, while the median income of renter households grew at 1.08 per cent.

Abbotsford CMA

Apartment Vacancy Rates Rise

The Abbotsford CMA consists of the City of Abbotsford and the District of Mission for the purpose of CMHC's Rental Market Survey.

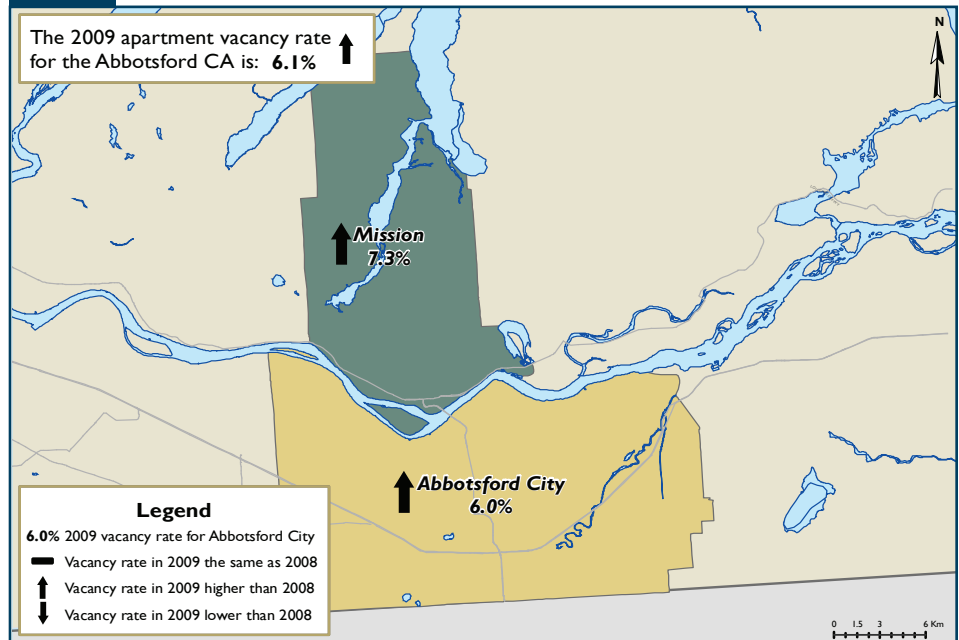

Renters are having an easier time finding accommodation. The rental apartment vacancy rate has more than doubled in the Abbotsford CMA, to 6.1 per cent in October 2009. Vacancy rates for private rental apartments have risen above the 15-year average of 4.2 per cent for the first time since 1999.

Economic factors and first time home buying have lessened demand for rental accommodation in the Abbotsford CMA. Low mortgage rates have sparked interest in homeownership. The slower job market has dampened rental demand and contributed to higher vacancy rates.

Vacancy rates moved up for all sizes of apartments. The highest vacancy rate was recorded for the larger three bedroom apartment units at 10 per cent. Bachelor units were next at 9.1 per cent followed by the two bedroom suites at 6.7 per cent. The one bedroom suites recorded the lowest vacancy rate in the CMA at 5.1 per cent, as well as the smallest increase from last year's survey when it was 2.6 per cent.

The stock of private rental units has remained relatively unchanged this year; in fact the universe has declined by just 36 units since 2007. The City of Abbotsford rental market constitutes a far larger part of the Abbotsford CMA than the adjacent Mission rental market. The City of Abbotsford composes approximately 90 per cent of the 3,752 units in the Abbotsford CMA total universe.

Figure 6

Rental Availability Edges Up

The availability rate reflects a combination of vacant units and occupied units where notice of intention to vacate has been given by either the landlord or tenant and a new tenant has yet to sign a lease. The average availability rate in the CMA has doubled over the past year. The District of Mission recorded the largest increase in the availability rate in the Abbotsford CMA, and also has the largest differential between the availability rate and the vacancy rate. Current conditions suggest that demand for private rental units in Mission is declining. The differential between vacancy and availability rates in Abbotsford on the other hand has fallen to 0.6 per cent from 0.9 per cent last year.

Rents Increase at Slower Pace

Despite increased vacancy rates, landlords have continued to secure higher rental charges than the year before. The average rent for the Abbotsford CMA was \$711 per

month in October of this year compared to \$696 in 2008. Same sample rent increases showed little variation between unit sizes, although one bedroom units have seen the largest increase, with an estimated 3.2 per cent. The average same sample rent in 2009 increased by 2.7 per cent compared to 4.1 per cent in 2008.

Renters Prefer Newer Units

Demand for newer private apartment units remains stronger than for those from an older construction period. The vacancy rate for rental units built in the past nine years was 4.5 per cent compared to an average vacancy rate of 6.9 per cent for units built between 1960 and 1974. Tenants are willing to pay \$158 more a month on average to live in a more modern complex. It is of interest to note that although the vacancy rate remains lower in these newer units, the vacancy rate increased equally (by 3.9 per cent) from last year for both post 1999 and pre 1975 rental units.

Figure 7

Abbotsford CMA Vacancy Rate Lower in 2010**Forecast**

Economic and demographic factors will boost rental demand in 2010. Rental demand tends to be pro-cyclical to the economy. In 2010 expect to see improvements in the Abbotsford CMA local economy. Jobs have been returning to the area in recent months, which has helped reduce the unemployment rate to eight per cent at the end of October. Job growth will continue next year with further jobs being created in line with an improving economy. Low mortgage rates and resale house prices that remain below peak levels, may still have an impact to the rental market next year with some people choosing to purchase rather than rent. Migration to the area will remain fairly strong.

The vacancy rate will edge down to about 4.5 per cent in 2010, while rent increases will be at rates similar to this year.

Secondary Market Survey - 2009

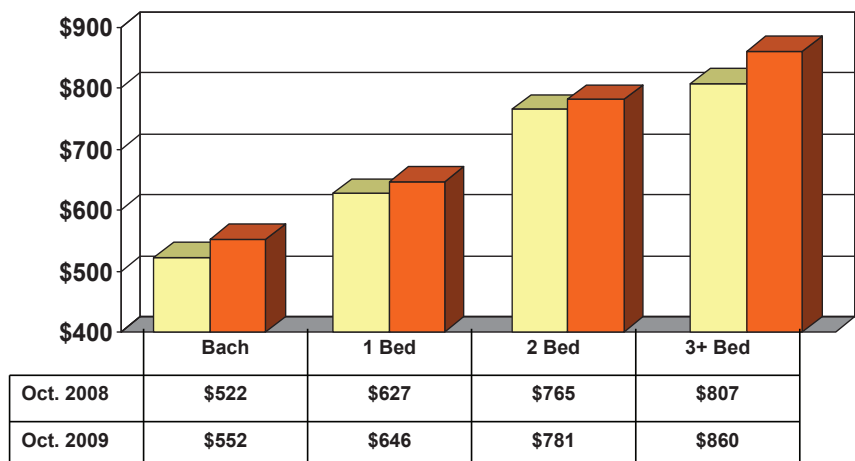

As of October 2007, CMHC has started surveying the secondary rental market (not including condominium units) in the Abbotsford CMA. The estimated number of households residing in rental units,

excluding purpose-built rentals and condominiums, was 7,285. Of these, almost half lived in single detached units and the remainder divided fairly evenly between semi-detached units and accessory suites. The average rent for a secondary rental unit was \$948 in October 2009, although it was significantly higher for single detached rentals at \$1,087.

National Vacancy Rate Increased in October 2009

The average rental apartment vacancy rate in Canada's 35 major centres⁶ increased to 2.8 per cent in October 2009 from 2.2 per cent in October 2008. The centres with the highest vacancy rates in 2009 were Windsor (13.0 per cent), Abbotsford (6.1 per cent), Peterborough (6.0 per cent), Calgary (5.3 per cent), and London (5.0 per cent). On the other hand, the major urban centres with the lowest vacancy rates were Regina (0.6 per cent), Québec (0.6 per cent), St. John's (0.9 per cent), Winnipeg (1.1 per cent), Kingston (1.3 per cent), and Victoria (1.4 per cent).

Figure 8

Apartment Rents Increase Abbotsford CMA

Source: CMHC Rental Market Survey

Demand for rental housing in Canada decreased due to slower growth in youth employment and improved affordability of homeownership options. Rental construction and competition from the condominium market also added upward pressure on vacancy rates.

The highest average monthly rents for two-bedroom apartments in new and existing structures were in Vancouver (\$1,169), Calgary (\$1,099), Toronto (\$1,096), and Ottawa (\$1,028). The lowest average monthly rents for two-bedroom apartments in new and existing structures were in Saguenay (\$518), Trois-Rivières (\$520), and Sherbrooke (\$553).

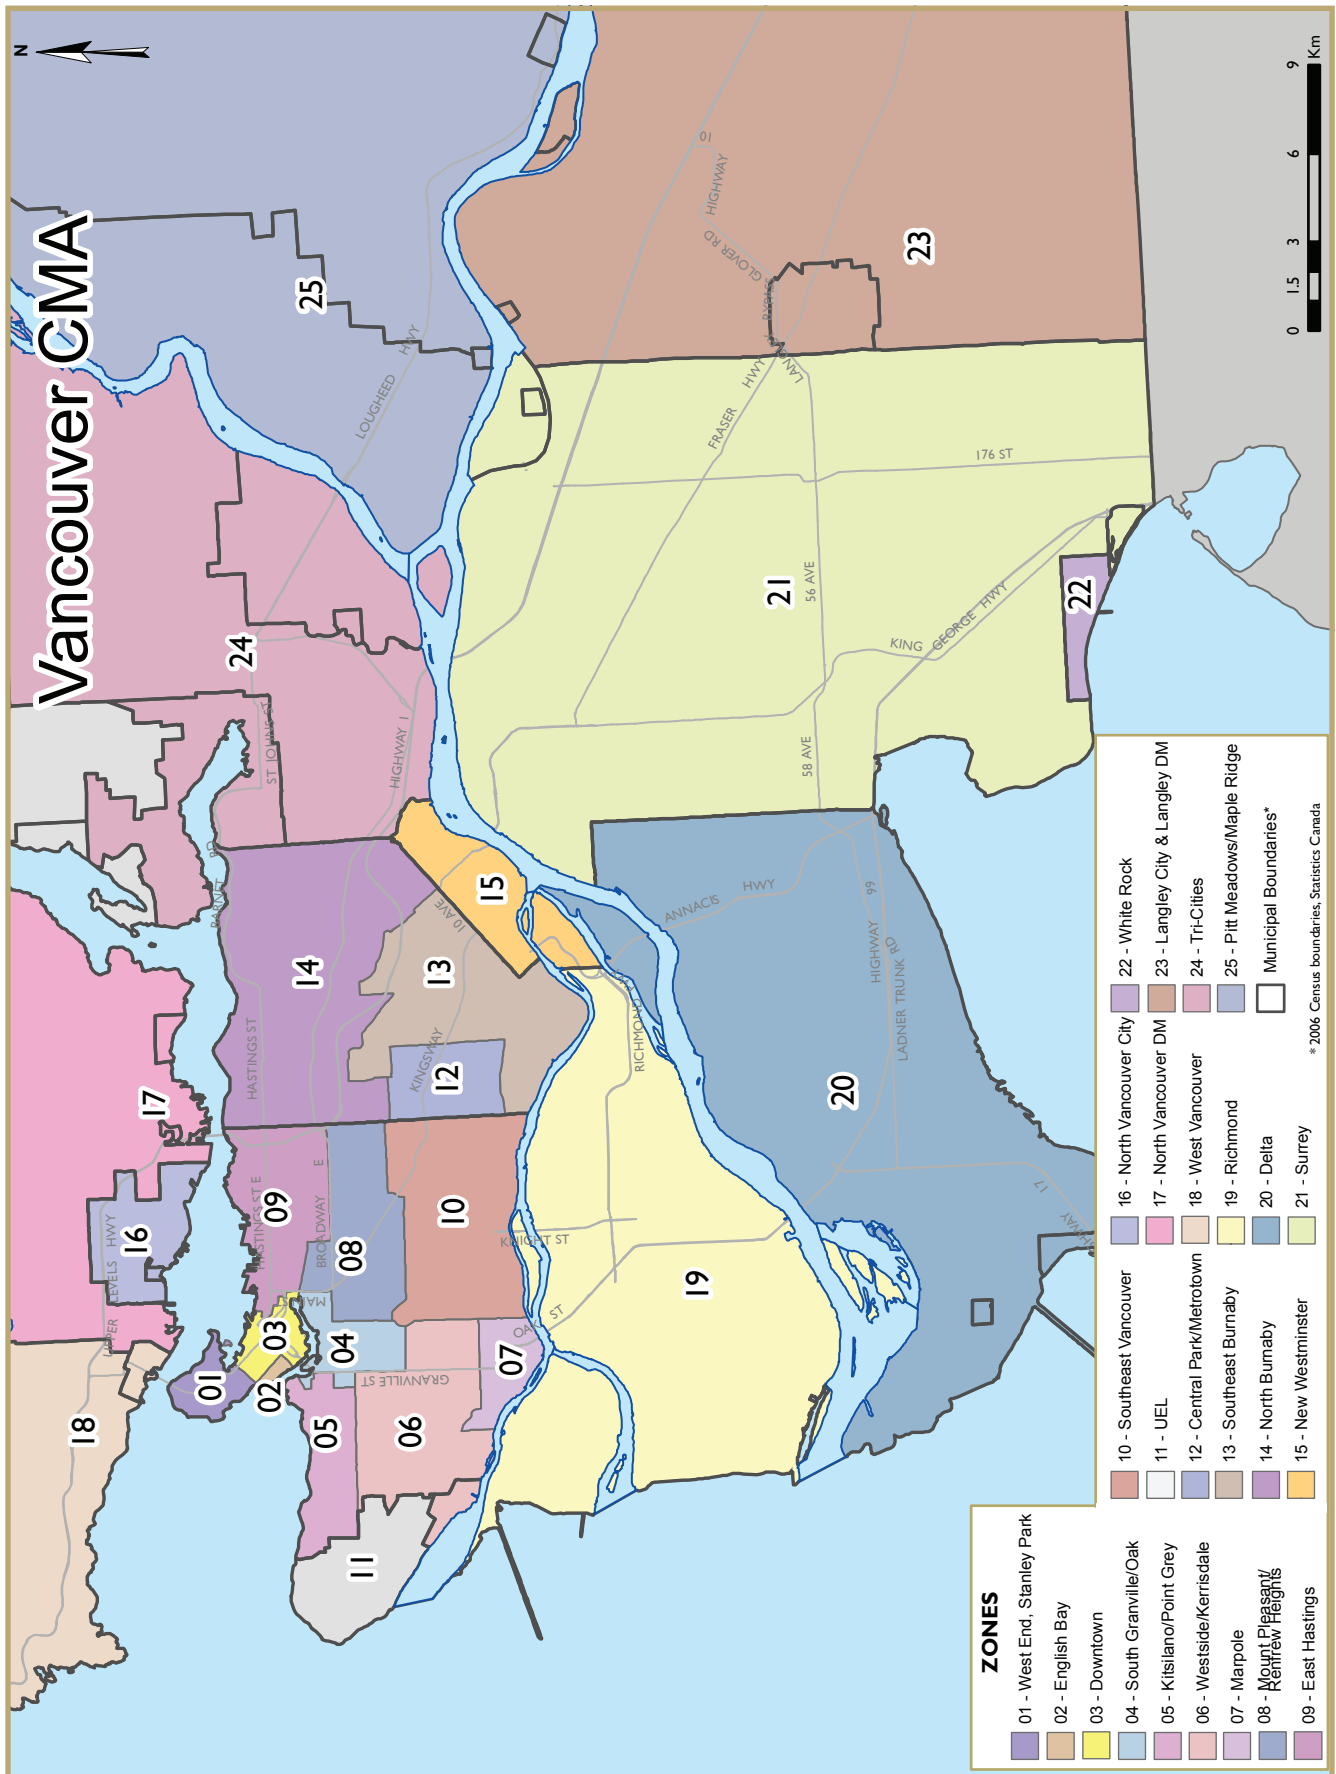

Year-over-year comparison of rents in new and existing structures can be slightly misleading because rents in newly-built structures tend to be higher than in existing buildings. However, by excluding new structures, we can get a better indication of actual rent increases paid by most tenants. The average rent for two-bedroom apartments in existing structures increased in all major centres. The largest rent increases in existing structures were recorded in Regina (10.2 per cent), Saskatoon (8.3 per cent), Victoria (5.0 per cent), and St. John's (4.9 per cent). Overall, the average rent for two-bedroom apartments in existing structures across Canada's 35 major centres increased by 2.3 per cent between October 2008 and October 2009.

CMHC's October 2009 Rental Market Survey also covers condominium apartments offered for rent in Calgary, Edmonton, Montréal, Ottawa, Québec, Regina, Saskatoon, Toronto, Vancouver, and Victoria. In 2009, vacancy rates for rental condominium apartments were below two per cent in seven of the 10 centres surveyed. Rental condominium vacancy rates were the lowest in Toronto, Saskatoon, and Ottawa. However, Regina and Edmonton registered the highest vacancy rates for condominium apartments at 3.0 per cent and 3.1 per cent in 2009, respectively.

The survey showed that vacancy rates for rental condominium apartments in 2009 were lower than vacancy rates in the conventional rental market in Ottawa, Saskatoon, Vancouver, Toronto, Edmonton, and Calgary. The highest average monthly rents for two-bedroom condominium apartments were in Toronto (\$1,487), Vancouver (\$1,448), Calgary (\$1,310), and Victoria (\$1,223). All surveyed centres posted average monthly rents for two-bedroom condominium apartments that were higher than average monthly rents for two-bedroom private apartments in the conventional rental market in 2009.

Apartment Vacancy Rates (%) by Major Centres		
	Oct-08	Oct-09
Abbotsford	2.6	6.1

Total	2.2	2.8

⁶ Major centres are based on Statistics Canada Census Metropolitan Areas (CMAs) with the exception of the Ottawa-Gatineau CMA which is treated as two centres for Rental Market Survey purposes and Charlottetown, which is a Census Agglomeration (CA).

RMS ZONE DESCRIPTIONS - VANCOUVER CMA	
Zone 1	West End, Stanley Park is the area between Stanley Park and Denman Street and extends to Coal Harbour to the north and English Bay to the south.
Zone 2	English Bay runs along Sunset Beach and English Bay to the south, connects to Davie Street to the North and Burrard Street to the East.
Zone 3	Downtown is the remainder of the West End not covered in Zone 1 and 2. Does not include the Downtown Eastside.
Zones 1-3	West End/Downtown
Zone 4	South Granville/Oak is west of Mount Pleasant and extends south to 33rd Avenue and west to Granville Street. Also includes the Fairview area and contains a section between Broadway to the north and 16th Avenue to the south, Burrard Street to the west and Granville Street to the east.
Zone 5	Kitsilano/Point Grey is the area west of South Granville/Oak that extends along 16th Avenue to the University Endowment Land.
Zone 6	Westside/Kerrisdale is the area south of Kitsilano/Point Grey and South Granville/Oak, and includes the areas: Kerrisdale, Mackenzie Heights, Dunbar, Shaughnessy and Oakridge.
Zone 7	Marpole is an area in South Vancouver that borders south of 57th Avenue between Cambie Street to the east and MacDonald Street to the west, and extends south down to the Fraser River.
Zone 8	Mount Pleasant/Renfrew Heights is the area that extends from the Mount Pleasant area to the west to Renfrew Heights to the east, and includes the neighbourhoods of Fraser and Knight. The area boundary to the north is Great Northern Way and Broadway, and roughly 33rd Avenue to the South.
Zone 9	East Hastings is the northeast area of Vancouver City, and includes the Downtown Eastside.
Zone 10	Southeast Vancouver includes the areas: Killarney, Fraserview, Collingwood and Champlain Heights.
Zones 1-10	Vancouver City
Zone 11	University Endowment Lands includes both the municipality and University of British Columbia. Note: the Rental Survey does not include student housing.
Zone 12	Central Park/Metrotown is the area between Boundary Road to the west and Royal Oak Avenue to the east, Moscrop Street and Gilpin Street to the north and Marine Drive to the south.
Zone 13	Southeast Burnaby extends to the border of New Westminster and includes the areas: Edmonds, Middlegate, Buckingham Heights, Deer Lake and Burnaby Lake.
Zone 14	North Burnaby is the northern half of Burnaby and includes the areas: Willingdon Heights, Brentwood Park, Capitol Hill, Sperling, Simon Fraser and Lougheed.
Zones 12-14	Burnaby City
Zone 15	New Westminster is the city boundaries.
Zone 16	North Vancouver City is the city boundaries.
Zone 17	North Vancouver DM is the district boundaries.
Zone 18	West Vancouver is the district boundaries.
Zone 19	Richmond is the city boundaries.
Zone 20	Delta is the corporation boundaries.
Zone 21	Surrey is the city boundaries.
Zone 22	White Rock is the city boundaries.
Zone 23	Langley City and Langley DM includes both the city and township boundaries.
Zone 24	Tri-Cities consists of Coquitlam, Port Coquitlam and Port Moody.
Zone 25	Pitt Meadows/Maple Ridge is the district boundaries for both municipalities.
Zones 1-25	Vancouver CMA

RMS ZONE DESCRIPTIONS - ABBOTSFORD CMA	
Zone 1	Abbotsford City - Includes census tracts 0001.00, 0002.00, 0003.00, 0004.00, 0005.01, 0005.02, 0006.00, 0007.01, 0007.02, 0008.01, 0008.02, 0009.01, 0009.02, 0010.00, 0011.00, 0012.00, 0013.00, 0014.00, 0100.00, 0101.00, 0102.00, 0103.00, 0104.00, 0105.00, 0106.01, 0106.02 and 0106.03.
Zone 2	Mission - Includes census tracts 0200.00, 0201.00, 0202.00, 0203.00, 0204.00, 0205.00, 0206.00 and 0207.00.
Zones 1-2	Abbotsford CMA

CONDOMINIUM SUB AREA DESCRIPTIONS - VANCOUVER CMA	
Sub Area 1	North Shore includes RMS Zone 16 (North Vancouver City), Zone 17 (North Vancouver DM), and Zone 18 (West Vancouver).
Sub Area 2	Burrard Peninsula includes RMS Zone 1 (West End, Stanley Park), Zone 2 (English Bay), and Zone 3 (Downtown).
Sub Area 3	Vancouver East/Westside includes RMS Zone 4 (South Granville/Oak), Zone 5 (Kitsilano/Point Grey), Zone 6 (Westside/Kerrisdale), Zone 7 (Marpole), Zone 8 (Mount Pleasant/Renfrew Heights), Zone 9 (East Hastings), Zone 10 (Southeast Vancouver), and Zone 11 (University Endowment Lands).
Sub Areas 2-3	City of Vancouver
Sub Area 4	Suburban Vancouver includes RMS Zone 12 (Central Park/Metrotown), Zone 13 (Southeast Burnaby), Zone 14 (North Burnaby), Zone 15 (New Westminster), Zone 19 (Richmond), and Zone 24 (Tri-Cities).
Sub Area 5	Fraser Valley includes RMS Zone 20 (Delta), Zone 21 (Surrey), Zone 22 (White Rock), Zone 23 (Langley City and Langley D.M.), and Zone 25 (Pitt Meadows/Maple Ridge).
Sub Areas	Vancouver CMA

NOTE: Refer to RMS Zone Descriptions page for detailed zone descriptions.

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a – Excellent, b – Very good, c – Good, d – Fair (Use with Caution)

** Data suppressed to protect confidentiality or data is not statistically reliable

++ change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0)

n/u: No units exist in universe for this category n/s: No units exist in the sample for this category n/a: Not applicable

¹The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a – Excellent, b – Very good, c – Good, d – Fair (Use with Caution)

** Data suppressed to protect confidentiality or data is not statistically reliable

++ change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0)

n/u: No units exist in universe for this category n/s: No units exist in the sample for this category n/a: Not applicable

TECHNICAL NOTE:

Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in 2008 vs. \$550 in 2009 represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the 2008 and 2009 Fall Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey (RMS)** every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data from sampled structures. Most RMS data contained in this publication refer to privately initiated apartment structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. In October 2006, CMHC has introduced a new measure for the change in rent that is calculated based on existing structures only. This estimate is based on structures that were common to the survey sample the previous year and the current year of the Rental Market Survey. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in the Rental Market Report – Canada Highlights, Provincial Highlights, and the local Rental Market Reports. The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market (SRMS)** in September and October to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS. CMHC has identified the following dwelling components to be included in SRMS:

- Rented single-detached houses.
- Rented double (semi-detached) houses (i.e.. Two units of approximate equal size and under one roof that are situated either side-by-side or front-to-back).
- Rented freehold row/town homes.
- Rented duplex apartments (i.e.. one-above-other).
- Rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type).
- Rented condominiums (can be any dwelling type but are primarily apartments).
- One or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents.
- A Condominium Apartment Vacancy Survey of condominium apartment owners to collect vacancy information.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the owner, manager, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in September and October, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates for the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability. In 2009, rented condominium apartments were surveyed in the following CMAs: Vancouver, Victoria, Calgary, Edmonton, Regina, Saskatoon, Toronto, Ottawa, Montréal and Québec (NOTE: condo rent data was not collected for Regina and Saskatoon). Other secondary rental market units were surveyed in Abbotsford, Barrie, Calgary, Edmonton, Halifax, Montreal, Ottawa, Quebec, St. John's, Toronto, Regina, Saskatoon, Kelowna, Vancouver and Victoria.

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

All data presented in this publication is based on Statistics Canada's 2001 and 2006 Census area definitions.

Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

Rental Affordability Indicator

Canada Mortgage and Housing Corporation has developed a new rental affordability indicator to gauge how affordable a rental market is for those households which rent within that market. The level of income required for a household to rent a median priced two-bedroom apartment, using 30 per cent of its income, is calculated. The three-year moving average of median income of households in a centre is then divided by this required income. The resulting number is then multiplied by 100 to form the indicator. A value above 100 indicates that less than 30 per cent of the median income is required to rent a two-bedroom apartment, conversely, a value below 100 indicates that more than 30 per cent of the median income is required to rent the same unit. In general, as the indicator increases, the market becomes more affordable; as the indicator declines, the market becomes less affordable.

Median renter household income estimates used in the calculation of the rental affordability indicator are based on results of Statistics Canada's Survey of Labour and Income Dynamics. Results for this survey are available from 1994 to 2005. CMHC has developed forecasts of median renter household income for 2006, 2007, 2008 and 2009.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
