#### **Note of appreciation**

*Canada owes the success of its statistical system to a long standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.*

# User information

---

## Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0<sup>s</sup> value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- P preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- E use with caution
- F too unreliable to be published

## Data quality symbols

When the figure is not accompanied by a data quality symbol, it means that the quality of the data was assessed to be "acceptable or better" according to the policies and standards of Statistics Canada. To denote specific levels of "acceptable or better" quality, letter grades such as <sup>A</sup> to <sup>D</sup> should be used.

## Letter, coefficient of variation and rating

A	0.00% to 4.99% = excellent
B	5.00% to 9.99% = very good
C	10.00% to 14.99% = good
D	15.00% to 24.99% acceptable

## Notes

Totals may not add due to the rounding procedures used to protect the confidentiality of the respondents.

## Acknowledgements

First to be thanked are Canadian farmers. The success of the Farm Financial Survey rests upon the continued assistance of the thousands of producers who participate every year.

Special thanks are extended to Agriculture and Agri-Food Canada for its contribution to the realization of this publication.

### Note of appreciation

Canada owes the success of its statistical system to a long standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. ## Canadian farm financial overview—2007

Average net cash farm income of Canadian farms was up 22% in 2007 from a decline of 1% in 2006. Average farm revenue increased 8% from 2006 and at \$265,892 surpassed average farm expenses of \$225,951. Average net worth increased 8% as average farm assets increased 7% to \$1,455,158 while average farm liabilities increased by 5% to \$265,776. One of the major factors contributing to the increase in farm assets is farm real estate values. Farmland and building values increased 10% in 2007.

### Note to readers

**Operating revenues** are generated from the sale of agricultural commodities and services, as well as agricultural payments and subsidies.

**Operating expenses** are the business costs incurred by farm operators for goods and services used in the production of agricultural commodities. Capital cost allowances (depreciation) and the value of inventory adjustments are excluded from operating expenses.

**Net cash farm income** is operating revenue minus operating expenses. Represents the amount of money available for debt repayment, investment or withdrawal by the owner(s).

**Net worth** is the difference between the market value of farm assets and the value of farm liabilities.

The debt-to-equity ratio is a measure of the reliance of farm operations on debt. This ratio declined on average from 23% in 2006, to 22% in 2007.

## Farm financial summary, by farm type—2007

Strong commodity prices in 2007 helped to push up grains and oilseeds operations' net cash income by 83% compared with 2006. The average grains and oilseeds farm reported net cash income of \$53,711 in 2007 compared to \$29,425 in 2006. Average farm revenue increased 21% while average operating expenses went up 11%. Compared with 2006, average farm assets increased 14% while average farm liabilities remained constant resulting in a net worth increase of 17%.

Weak slaughter prices continued to affect hog operation revenues in 2007. Net cash income declined to \$42,492 compared to \$57,760 in 2006, a drop of 26%. While farm liabilities increased 22%, average farm assets dropped 2%, resulting in a decrease in net worth of 11%. As a result, the debt-to-equity ratio of hog operations increased to 56% in 2007 from 41% the previous year.

Cattle operations experienced a 53% drop in net cash farm income in 2007 compared with a 16% drop in 2006. This was the largest drop in net cash farm income of the major farm types. Although gross farm revenue of cattle operations increased by 5%, operating expenses increased by 9% in 2007 compared with 2006. Farmland values helped drive up farm asset values resulting in a net worth increase of 3%.

Dairy farms experienced a slight upward turn of 1% in net cash farm income. Both assets and liabilities increased with an overall rise of 6% in net worth. Quota values rose 7% in 2007 compared to 2006.

Average net cash farm income for poultry and egg farms declined 3% in 2007. While average farm asset values remained stable, average farm liabilities increased 10%, resulting in a drop of 3% in average net worth of poultry and egg farms.

Potato farms experienced a 21% decline in average net cash farm income to \$117,714 from \$148,656 in 2006. Although potato revenues increased 2%, expenses climbed by 6%. Average farm assets increased 13% and farm liabilities increased 8%, resulting in a net worth increase of 15%.

The average net cash farm income of vegetable farms dropped 28% while the net cash farm income of fruit farms climbed 30%. Vegetable farms reported a 12% decrease in gross farm revenues in 2007, while fruit farms reported a 3% increase. As in 2006, operating expenses for both types of farms dropped in 2007. Both assets and liabilities decreased on average for vegetable farms, but increased for fruit farms. As a result, net worth decreased by 24% for vegetable farms and increased 1% for fruit farms.

Greenhouse, nursery and floriculture operations reported a 19% decrease in net cash farm income to \$84,445 in 2007 compared with \$104,837 the previous year. These operations experienced an 11% decline in average gross farm revenue and a 10% drop in average operating expenses. There was very little change in average liabilities and average assets. Average net worth rose slightly by 2% compared with 2006.

### **Capital investments and sales**

In 2007, capital investments for the average Canadian farm increased by 13% in comparison to 2005 to \$60,051, (2005 is the last year for which capital investments and sales data is available). Machinery purchases continued to represent the bulk of these investments with \$26,721 spent on average per farm. Breaking the trend since 2001, quota investments decreased by 24% compared with 2005. In real terms, quota values went back to levels last seen in 2001 (2002 = 100).

Capital sales increased as well in 2007 compared with 2005, by 7%. The bulk of these sales were of land and buildings followed by machinery traded in. As with quota investments, quota sales decreased 21% compared with 2005 (in real terms, quota sales decreased by 26% compared with 2005).

Average net capital investments (average investments minus average sales) increased by 17% compared with 2005. Expressed in real terms (2002 = 100), average net capital investments increased by 10% in 2007 compared with 2005, the first positive growth since 2002. Average net capital invested in 2007 was \$41,569 compared with \$35,666 in 2005.

## What's New

---

### New Farm Financial Survey Frame for 2007

The count for the estimated number of farms for the Farm Financial Survey (FFS) has increased between 2006 and 2007.

The survey populations used for the collection of the 2003 to 2006 FFS surveys were based on the 2001 Census of Agriculture, whereas the collection frame for the 2007 FFS was based on the 2006 Census. The 2007 FFS information was established using a more up-to-date survey frame, which is a more recent list of farms.

Due to these changes in the survey frame, **users should be careful when comparing years of the FFS.**

Please refer to the Methodology section for more detail about the survey population and sampling procedures.

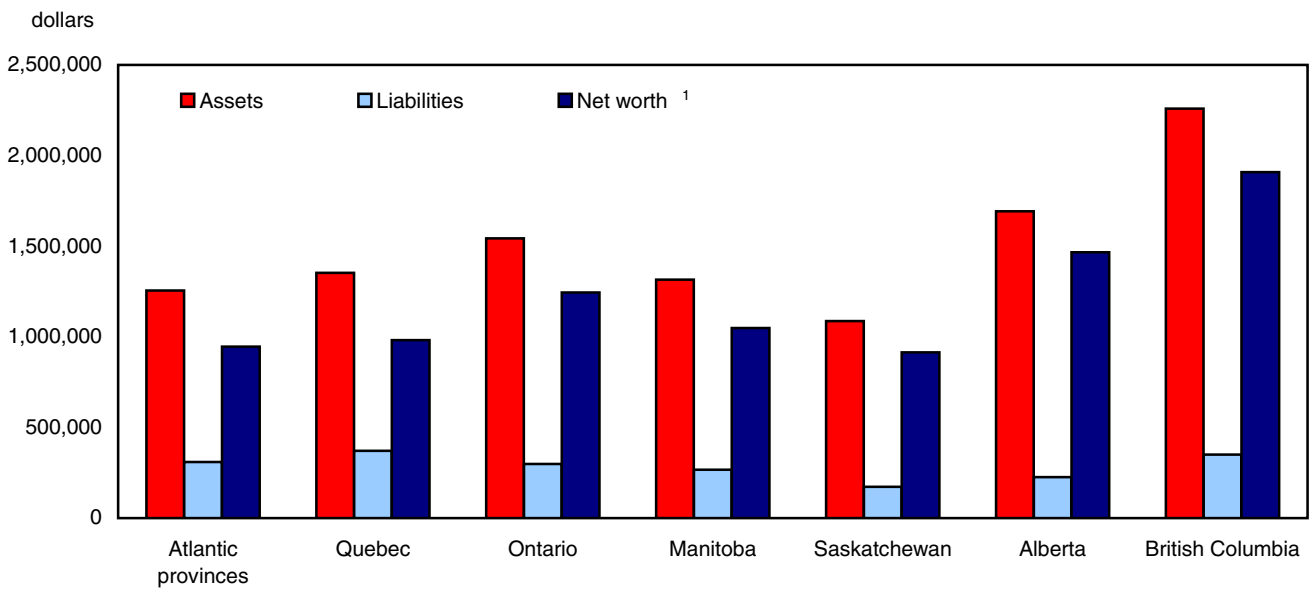

# Introduction

---

In 1993, the Farm Financial Survey (FFS) was created to replace the Farm Credit Corporation Survey (FCC). Since 1981, the FCC Survey had been conducted on an ad-hoc basis by the Farm Credit Corporation, Agriculture and Agri-Food Canada (AAFC) and Statistics Canada. The Farm Credit Corporation withdrew from this project but there was still a need for AAFC and Statistics Canada to maintain a similar survey on a regular basis.

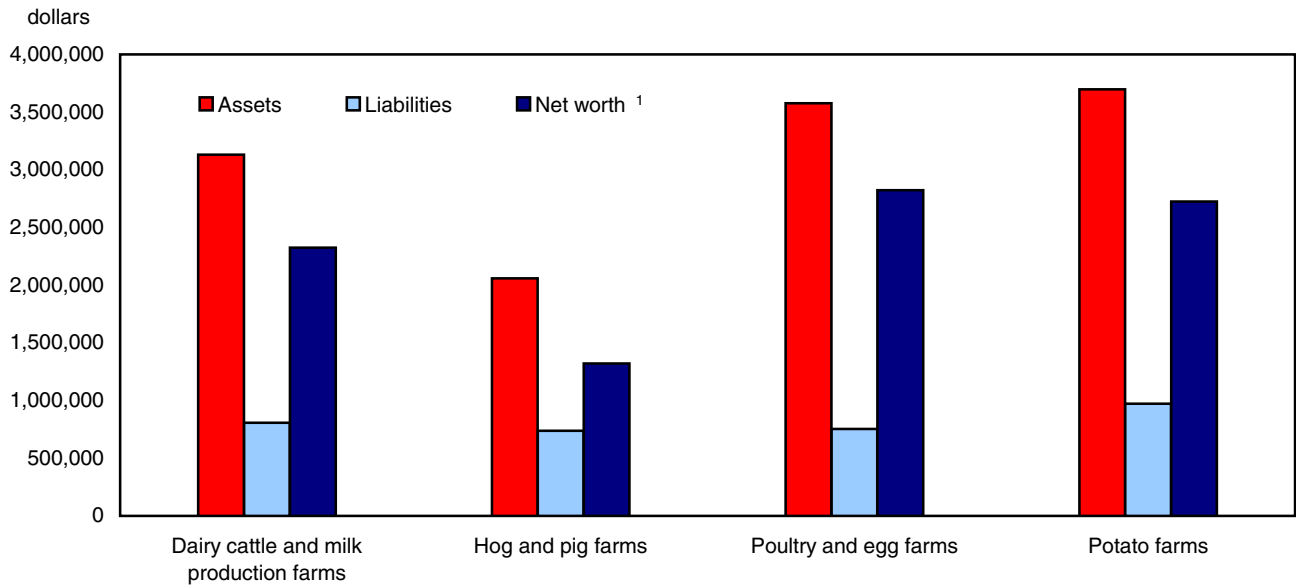

At present, AAFC finances this survey as they require accurate data concerning the current and long-term viability of farms and the financial health of farm families. The survey collects information on assets, liabilities, revenues, expenses, capital investments and capital sales. Crop and livestock information is also collected to measure physical characteristics of the farms.

- The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
- Canadian and regional balance sheets include the following farm types: beef cattle ranching and farming including feedlots; dairy cattle and milk production farms; fruit and nut farms; grain and oilseed farms; greenhouse, nursery and floriculture farms; hog and pig farms; other vegetable and melon farms; potato farms; poultry and egg farms.
- Net worth is the difference between market value of the farms assets and the value of the liabilities.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Canadian and regional balance sheets include the following farm types: beef cattle ranching and farming including feedlots; dairy cattle and milk production farms; fruit and nut farms; grain and oilseed farms; greenhouse, nursery and floriculture farms; hog and pig farms; other vegetable and melon farms; potato farms; poultry and egg farms.
3. Net worth is the difference between market value of the farms assets and the value of the liabilities.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Canadian and regional balance sheets include the following farm types: beef cattle ranching and farming including feedlots; dairy cattle and milk production farms; fruit and nut farms; grain and oilseed farms; greenhouse, nursery and floriculture farms; hog and pig farms; other vegetable and melon farms; potato farms; poultry and egg farms.
3. Net worth is the difference between market value of the farms assets and the value of the liabilities.

- The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
- Canadian and regional balance sheets include the following farm types: beef cattle ranching and farming including feedlots; dairy cattle and milk production farms; fruit and nut farms; grain and oilseed farms; greenhouse, nursery and floriculture farms; hog and pig farms; other vegetable and melon farms; potato farms; poultry and egg farms.
- Net worth is the difference between market value of the farms assets and the value of the liabilities.

- The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
- Canadian and regional balance sheets include the following farm types: beef cattle ranching and farming including feedlots; dairy cattle and milk production farms; fruit and nut farms; grain and oilseed farms; greenhouse, nursery and floriculture farms; hog and pig farms; other vegetable and melon farms; potato farms; poultry and egg farms.
- Net worth is the difference between market value of the farms assets and the value of the liabilities.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

<b>Net cash farm income <sup>3</sup></b>	<b>52,957 <sup>D</sup></b>	<b>114,645 <sup>D</sup></b>	<b>153,456 <sup>D</sup></b>	<b>148,632 <sup>C</sup></b>	<b>F</b>

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

Other expenses	636,133 B	626,087 B	598,680 C	703,422 B	563,611 B
<b>Net cash farm income 3</b>	<b>100,676 C</b>	<b>99,380 B</b>	<b>137,186 B</b>	<b>125,594 C</b>	<b>133,640 C</b>

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Fruit and nut farms, other vegetable and melon farms, potato farms and greenhouse, nursery and floriculture farms data are only available at the Canada level due to confidentiality.
3. Net worth is the difference between market value of the farms assets and the value of the liabilities.
4. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

- The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
- Net worth is the difference between market value of the farms assets and the value of the liabilities.
- Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

<b>Net cash farm income<sup>3</sup></b>	<b>13,691<sup>C</sup></b>	<b>28,641<sup>B</sup></b>	<b>29,087<sup>B</sup></b>	<b>29,516<sup>B</sup></b>	<b>38,306<sup>B</sup></b>

1. The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
2. Net worth is the difference between market value of the farms assets and the value of the liabilities.
3. Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

- The estimates contained in this table have been assigned a letter to indicate their coefficient of variation (c.v.) (expressed as a percentage). The letter grades represent the following coefficients of variation: A is used for a c.v. between 0.00% and 4.99% and means Excellent, B is used for a c.v. between 5.00% and 9.99% and means Very good, C is used for a c.v. between 10.00% and 14.99% and means Good, D is used for a c.v. between 15.00% and 24.99% and means Acceptable, E is used for a c.v. between 25.00% and 34.99% and means Use with caution. F replaces the data when the c.v. is equal to or greater than 35.00% and means Too unreliable to be published. The quality of the estimates not accompanied by a data quality symbol is assessed to be acceptable or better.
- Net worth is the difference between market value of the farms assets and the value of the liabilities.
- Net cash farm income is total revenue minus total expenses, excluding capital cost allowances (depreciation), the value of inventory adjustments, Net Income Stabilization Account (NISA) and Compte de stabilisation du revenu agricole (CSRA) withdrawals and contributions, and Canadian Agricultural Income Stabilization (CAIS) deposits.

2. Net capital investment is total capital investment minus total capital sales.
3. Capital investments and sales data were not included in the survey for the 2006 reference period.

## Data concepts & methods

---

### Sampling frame

The target population for the survey consists of all Canadian farms that were active at the end of the reference year 2007. These are identified using the 2006 Census of Agriculture, and updated by the usual survey programs. Due to operational constraints and respondent burden considerations, some specific farms are excluded from the target population to obtain the survey population. The exclusions are: farms with less than \$10,000 in sales from agricultural activities, institutional farms, community pastures, farms on Indian Reserves and farms that are part of multi-holding companies. The lower boundary of \$10,000 has been used since FFS 1998. Prior to this, the cut-off had been \$2,000.

A preliminary list frame containing all farms from the 2006 Census of Agriculture was created without the farms defined by the aforementioned exclusion rules. The 2005 sales data collected by the 2006 Census were used to define the \$10,000 cut-off.

### Frame Coverage

Farms are added to the preliminary list frame to compensate for the undercoverage of the 2006 Census itself, and for new farms that started their activities since the Census. This does not apply for the current FFS; the coverage is of good quality because the Census data is new. In subsequent years, farms identified by the Continuous Frame Update (CFU) survey will be added to the FFS frame. The process of adding farms to the frame was done for the first time in FFS 2000. Prior to the 2004 survey occasion, fiscal farms were added to the frame. As of the 2004 occasion, farms contacted by the annual Farm Update Survey (FUS) were the main source of additional farms. FUS used tax return information to contact a sample of new farms or farms missed by the 2001 Census. Farms determined to be active and with a gross farm income greater than \$50,000 were added to the list frame. Starting with next year's FFS, the CFU (which can be thought of as a completely redesigned FUS) will be used to identify farms that should be added to the survey frame. For this survey occasion, however, no non-Census farms were added to the frame.

Two main sources of frame under-coverage remain: new farms that started their activities after Census 2006, and farms whose sales in 2005 were less than the \$10,000 threshold, but which have surpassed the threshold since then.

**Text table 1 presents the number of farms in the survey frame.**

### Stratification of the List Frame

The frame was stratified according to Agriculture and Agri-Food Canada's needs and recommendations by specialists in statistical methods. Since there was a requirement by Agriculture and Agri-Food Canada for estimates by province, farm type and farm size (as measured by sales and capital), the list frame was stratified by these variables.

Within each province, the 12 farm types of primary interest are Dairy, Beef, Hogs, Poultry-Layers, Poultry-Broilers, Wheat/Grain/Oilseeds, Potatoes, Fruits, Vegetables, Greenhouses, Feedlots (Alberta only) and Tobacco (Ontario only). In previous FFS designs, farms that did not belong to one of the farm types of primary interest were all assigned a farm type of "Other". This led to some very heterogeneous strata whose members sometimes had very large survey weights.

For the current FFS, two aspects of the redesign aimed to diminish the impact of this issue. First, as many farms as possible were promoted to non-Other strata by using more information to identify the primary commodity for each farm. The second change was to split the “Other” farms into groups to increase the homogeneity within each of these strata. The new “Other” strata are Sod/Nursery, Sheep/Goats, Bees, Horses, Livestock combinations, All Other Animals, Hay, All Other Crops, Other Atlantic Animals and Other Atlantic Crops.

Within each province, farm types were sub-divided into two to five strata based on farm size, as measured by the sales and the capital reported on the 2006 Census. This definition of farm size was another aspect that was redesigned for the current FFS. As was done in other redesigned agricultural surveys, all farms with less than \$25,000 in sales were set into their own stratum, so that we may investigate their contribution to the estimates. Farms with sales greater than \$25,000 were split into two sales groups. Then, the “middle” sales group was further stratified into three groups based on the total farm capital (value of machinery, livestock, land and buildings owned).

**Text table 1**  
**FFS survey frame and sample**

Province	2006 Census	Exclusions	New Farms	Current FFS Frame	Initial Sample Size	Sample sent for Collection
Newfoundland and Labrador	558	223	0	335	223	215
Prince Edward Island	1,700	421	0	1,279	514	506
Nova Scotia	3,795	1,298	0	2,497	650	642
New Brunswick	2,776	967	0	1,809	625	615
Atlantic	8,829	2,909	0	5,920	2,012	1,978
Quebec	30,675	4,682	0	25,993	2,369	2,316
Ontario	57,211	14,857	0	42,354	3,316	3,195
Manitoba	19,054	3,827	0	15,227	1,321	1,277
Saskatchewan	44,329	6,317	0	38,012	1,696	1,661
Alberta	49,431	10,465	0	38,966	2,168	2,115
British Columbia	19,844	9,590	0	10,254	1,622	1,577
Continuous Frame Update survey farms	0	0	0	0	0	0
Total	229,373	52,647	0	176,726	14,504	14,119

### Sample Allocation

The initial sample size is overstated to compensate for farms that have become out of scope since the last Census and for the farms that require some special handling. These farms are excluded from Computer-Assisted Telephone Interviewing (CATI) collection. Farms that participate in the Large Agricultural Operation Statistics (LAOS) program are contacted by a specialized team at head office; 125 of these were sampled for this survey occasion.

The sample size is allocated first at the domain level, which is defined as province by farm type. It is then allocated at the stratum level, which is defined as size class.

### Allocation to the Farm Types

The total sample size is determined by finding an acceptable balance between data quality and operational constraints. As in the previous occasion of the survey, the sample size was set at 14,000 farms. Reliable provincial estimates are required for key financial variables for the major farm types used in the stratification. Given this requirement, the sample size is allocated to each stratum based on targeted coefficients of variation (CV) for estimates of key financial variables. The CV is defined as the ratio of the standard error over the estimate.

In the previous survey occasion, the data quality constraints were set as follows: for estimates at the province level or at the farm type level, the target CV for revenue was set at 2.7%. There were also quality requirements at certain province and farmtype combinations of interest; for these, target CVs between 3.7% and 4.4% (average of 4.2%) were set for estimated revenue.

The redesign allowed for a more restrictive strategy, without necessarily increasing the sample size. Indeed, it was found that the target CVs could be set at 2% for provinces or farm types, and 4% for province and farmtype combinations of interest. Instead of these targets being applied only to revenue estimates, they were applied simultaneously to both revenue and assets, as provided in the 2006 Census.

### **Allocation to the Strata**

Once the sample sizes by domain were determined, Neyman allocation was used to distribute the sample to the farm size strata. This method minimizes the farm type CVs for a given sample size. Some operational constraints had to be considered.

First, within a stratum, a minimum sample size had to be set to ensure that the stratum is represented despite possible non-response. This minimum was set at 5 (or the total stratum size if it was smaller than 5). Second, within a stratum, a minimum sampling rate (sample size divided by the population size) had to be satisfied to ensure that each farm would not represent a too important portion of the population at the estimation stage. In such a case, the estimates would become too dependent on a small number of farms and would be less reliable. The chosen minimum rate was 1/50, leading to design weights that did not exceed 50.

There were no new farms added to the frame, but in previous occasions, Neyman allocation was used to allocate the sample of FUS farms. The minimum sampling rate was set at 1/10. Since CFU farms will be added to the appropriate stratum in the future, they can be sampled along with the existing farms.

### **Sampling**

The sample was drawn from a frame based on the 2006 Census of Agriculture.

### **Sample Selection**

As described previously, the sample sizes to be drawn from each stratum were determined using Neyman allocation. Once these sample sizes were set, a simple random sample of farms was selected from within each stratum. This is done by assigning a random number to each farm within the stratum, sorting the farms accordingly, and then selecting from the list until the required sample size is reached.

### **Collection period and overlap with other surveys**

Data collection for the current FFS took place from late June until early August 2008 (instead of the traditional spring collection period). The main advantage of this collection period is that having now received the financial reports back from their accountants, the respondents are in a better position to reply to the financial questions. One disadvantage of the new collection period is that Statistics Canada carries out collection for several other agricultural surveys around this time. Thus, in order to reduce respondent burden, overlap with other surveys had to be controlled.

The July Livestock survey has a collection period that was close to the FFS. A farm that was selected for both surveys was replaced by another farm for FFS: the new farm was selected randomly from available farms that were in the same FFS stratum and the same Livestock stratum. If such a replacement farm could not be found, the originally sampled farm was retained, but a note was added to warn interviewers of the overlap. This strategy reduced overlap between the two surveys by approximately 67%. The same negative coordination strategy was used to control the overlap with the Atlantic survey, and thus reduced the overlap between those two surveys by approximately 54%.

The July Crops survey had a collection period that directly overlapped with the FFS collection period, so it was decided to completely eliminate the overlap between their two samples. Negative sample coordination was used to minimize the overlap; after having reduced it by more than 80%, a few more than 200 farms remained; they were omitted from the Crops sample and retained for FFS.

## Types of Contact

Surveys prior to FFS 1998 relied on personal interviews. In December of 1996, a test was conducted to evaluate the quality of responses to the FFS questionnaire through telephone interviews. Based on the result of this test (see CARON [1998]), it was decided that the 1998 FFS could be conducted using telephone interviews. This method reduced the cost of data collection without compromising the quality of the data. Some of these savings were allocated to increase the overall sample size. For this survey occasion, as has been done in recent years, a paper questionnaire was sent to the respondents for preparation purposes, and the survey was carried out (with non-LAOS respondents) as a telephone survey from the regional offices.

## Estimation

The estimation process includes an edit and imputation procedure where basic verifications are performed on the survey data and imputations are done when required. The imputed survey data are used as input to the estimation system.

## Sample Weights

The sample weights are computed as the ratio of the number of farms in the population over the actual sample size observed within each stratum. Farms that did not provide valid data, identified either by failing edits or by refusals or no contacts, are excluded from the sample counts; the weights of the other sampled farms are increased to compensate for this non-response. This practice is referred to as raising factor adjustment. Sampled farms that were out of business retain their design weight, but all their data is set to zero. This is done to represent other farms that were on the frame, but were in fact out of scope.

## Level Estimation

Once the weights have been calculated for each record, any level of required estimates may be obtained using domain estimation (Canada, provincial, crop districts, etc.). The estimates are accompanied by the appropriate CV's.

# Data accuracy

---

## Data reliability

The statistics contained in this publication are estimates derived from a random sample of Canadian farms and, as such, are subject to sampling and non-sampling errors. The quality of the estimates thus depends on the combined effect of these types of errors.

## Sampling errors

These errors arise because observations are made only on a sample and not on the entire population. The sampling error depends on such factors as the size of the sample, the variability of the characteristic of interest in the population, the sampling design and the method of estimation. For example, for a given sample size, the sampling error will depend on the stratification procedure employed, allocation of the sample, choice of the sampling units and method of selection. In sample surveys, since inference is made about the entire population covered by the survey on the basis of data obtained from only a part of the population, the results are likely to be different than if a complete census was taken under the same general survey conditions. The most important feature of probability sampling is that the sampling error can be measured from the sample itself.

## Non-sampling errors

These errors are present whether a sample or a complete census of the population is taken. Non-sampling errors may be introduced at various stages of data processing (such as coding, data entry, editing, weighting, tabulation, etc.) and include response errors introduced by the farm operators as a result of misclassifications. All efforts are undertaken to minimize non-sampling errors through extensive edits and data analysis, but some of these errors are outside the control of Statistics Canada.

## Sampling error measures

The sample was selected using stratified simple random sampling. This means that farm operations were randomly selected into each stratum. The resulting sample is just one of many possible samples that could have been selected. If it was possible that each one of these samples could be surveyed under essentially the same conditions, with an estimate calculated from each sample, it would be expected that the sample estimates would differ from each other. The average estimate derived from all these possible sample estimates is termed the expected value. The expected value can also be expressed as the value that would be obtained if a census enumeration was taken under identical conditions of collection and processing. An estimate calculated from a sample survey is said to be precise if it is near the expected value.

Sample estimates may differ from this expected value of the estimates. However, since the estimate is based on a probability sample, the variability of the sample estimate with respect to its expected value can be measured.

Guides to the precision (reliability) of sample estimates or potential size of sampling errors are provided through sampling variance (defined as the average, over all possible samples, of the squared difference of the estimate from its expected value) or the standard error (square root of the sampling variance) of the estimates. The standard error and variance are measures of precision in absolute terms. The coefficient of variation (CV), defined as the standard error divided by the sample estimate, is a measure of precision in relative terms. For comparison purposes one may more readily compare the sampling error of one estimate to the sampling error of another estimate, through the use of the coefficient of variation. In this publication, the coefficient of variation is used to measure the sampling error of the estimates.

The estimates contained in this publication have been assigned a letter to indicate their coefficient of variation (expressed as a percentage). The letter codes represent the following coefficients of variation:

**Text table 1**  
**Coefficients of variation**

Rating	CV Range	Code
excellent	0.01 to 4.99	A
very good	5.00 to 9.99	B
good	10.00 to 14.99	C
acceptable	15.00 to 24.99	D
use with caution	25.00 to 34.99	E
too unreliable to be published	≥ 35.00	F

The variability in the estimate can be obtained by constructing confidence intervals around the estimate using the estimate and the coefficient of variation. Thus, for our sample, it is possible to state with a given level of confidence that the confidence interval constructed around the estimate will cover the expected value. For example, if an estimate of \$15,000,000 has a coefficient of variation of 10%, the standard error will be \$1,500,000 or the estimate multiplied by the coefficient of variation. It can then be stated that the interval whose length equals the standard deviation about the estimate, i.e., between \$13,500,000 and \$16,500,000, will cover the expected value over repeated surveys, 68% of the time. Or, it can be stated that the interval whose length equals two standard deviations about the estimate, i.e., between \$12,000,000 and \$18,000,000, will cover the expected value over repeated surveys, 95% of the time.

### Non- sampling error measures

The exact population value is aimed at or desired by both a sample survey as well as a census. We say the estimate is accurate if it is near this value. Although this value is desired, we cannot assume that the exact value of every unit in the population or sample can be obtained and processed without error. Any difference between the expected value and the exact population value is termed the bias. Systematic biases in the data cannot be measured by the probability measures of sampling error as previously described. The accuracy of a survey estimate is determined by the joint effect of sampling and non-sampling errors.

### Note on farm type

Since the 2003 Farm Financial Survey (FFS), farm type has been based on the 2002 North American Industry Classification (NAICS). In previous years, the 1980 Standard Industrial Classification (SIC) had been used. For further detail, please refer to the Whole Farm Database Reference Manual, Catalogue no. 21F0005GPE, "Table A.2: Concordance between farm type codes based on NAICS structure and WFDB codes based on SIC structure by data source."

### Note on revenue class

Caution should be used when comparing estimates by revenue class for 2003, 2004 and 2005 with previous reference years. The BSE crisis resulted in lower farm sales in 2003, 2004 and 2005 for certain farm types, particularly those in the beef sector. The United States border reopened for live cattle under 30 months in July 2005.

Farms are grouped into revenue classes based on their total gross farm revenue. Farms reporting significantly lower revenue in 2003, 2004 or 2005 compared to previous years would fall into lower revenue classes. In general, those farms affected would have larger assets, liabilities and expenses than other farms normally in these lower revenue classes. This has resulted in increases in some asset values, liabilities and expenses in lower revenue classes. The estimates of farm type by revenue class should be comparable for most farm types other than beef.

### Note on land and buildings

For the 2006 collection, questions were added on the value of cropland owned and rented. The new method may have placed a greater emphasis on the current market value of land and allowed for a better estimate of the total asset value of farm land and buildings.

### Note on farm counts

Note that some of the change in farm counts from year to year is due to revenue variability. Farms may be in scope one year and out of scope another year based on the \$10,000 threshold used to determine the population for the Farm Financial Survey.

### Comparability of data and related sources

The comparability of FFS data with other Statistics Canada sources such as the Agricultural Economic Statistics series (AES), the Census of Agriculture, and the Taxation Data Program (TDP) of Agriculture Division, is affected by differences in concepts, target populations (e.g. exclusions) and methods. The compound effect of those differences can contribute to fairly significant variation, even in some trends. For example, assets, liabilities, revenues and expenses for the FFS are not directly comparable with the above sources. As a result of the residual method used to derive net income, small differences in revenues or expenses can result in large differences in net income level and yearly change.

### Target population

The target population is not generally comparable to those of other data sources, as some inclusions and exclusions differ among the projects.

Two important exclusions have an impact on the FFS estimates: farms with less than \$10,000 in gross farm receipts (which accounted for about 22% of the farms from the 2001 Census of Agriculture); and multi-holding operations. Some other inclusions and exclusions that differ among the projects also have important effects on the data. For example: exclusion of inter-farm sales (within a province) from AES receipts and expenses; exclusion of corporate operations with less than \$25,000 in gross receipts and less than 50% of receipts from agricultural activities from TDP (enterprise concept).

### Methods

Some factors that may contribute to differences in estimates include data sources (e.g. administrative data, self-enumerated information) and differing respondents (e.g. farm operators, tax filers). Also, reporting for FFS and TDP contain an unmeasured mix of cash and accrual accounting, as well as fiscal years that differ from the calendar year, while AES data is based on cash accounting and a fiscal year end of December 31.

## Glossary

---

**Capital investments.** Purchase or acquisition of some farm related building, structure or item from which a benefit will be derived over a period of time. Included are purchases of land and buildings, land improvements, construction or major renovation of farmhouses, storage for manure, pesticide, chemical or fuel, and other buildings, environmental protection improvements, purchases of breeding and replacement livestock, quota, farm machinery and equipment and other farm assets. The value of the Goods and Services Tax (GST), Harmonized Sales Tax (HST), Provincial Sales Tax (PST) and Quebec Sales Tax (QST) is excluded from the values reported.

- **Land and buildings.** Included are the purchase of farmland, farmhouse and any other farm buildings.
- **Land improvements.** Included are expenditures to make land suitable for general agricultural use such as clearing of land, levelling, irrigation, drainage and orchard planting.
- **House construction or major renovation.** Included is the construction of a new farmhouse or any major renovations to the existing farmhouse.
- **Manure storage construction or major renovation.** Included is construction or any major renovations of concrete manure tanks and concrete-walled manure storage, including composting building and facilities.
- **Pesticide, chemical and fuel storage construction or major renovation.** Included is construction or any major renovations of buildings or facilities used only for storing pesticides or chemicals and tanks for storing fuel or gasoline.
- **Other building construction or major renovation.** Included is construction or any major renovations to barns, silos, sheds or garages.
- **Environmental protection improvements.** Included are shelterbelts, windbreaks, buffer strips or fences for waterways protection.
- **Breeding and replacement livestock.** Livestock purchased with the intention of being kept on the operation for breeding purposes and for more than one year. Included are bulls, cows, heifers for replacement, boars, sows, bred gilts, rams, ewes, replacement lambs and goats for milk or hair.
- **Quota.** An entitlement or right to sell or deliver a certain amount of an agricultural product, in particular, milk, eggs, poultry and tobacco. Depending on the product and the regulations prevailing in the province of sale, quotas may or may not be purchased separately from real estate. Only quota purchased separately from other assets are reported.
- **Farm machinery and equipment.** Included are the purchase of new or used farm cars and trucks, tractors, trailers, office equipment and equipment for feeding, tillage, seeding, harvesting, processing, etc. All values reported reflect the gross expenditure before trade-in, and include leased farm machinery and equipment since 2001.
- **Other farm assets.** Included are purchases of stocks, shares, bonds, Guaranteed Investment Certificates (GICs), mutual funds and any reinvested dividends. Excluded are contributions to RRSPs, NISA, CAIS and CSRA accounts.

**Capital sales.** Included are monies received from the sale of capital items such as land and buildings, machinery and equipment (whether traded-in or sold outright), quotas and breeding and replacement livestock. Only quota sold separately from other assets are reported. The value of the GST, HST, PST and QST is excluded from the values reported.

- **Land and buildings.** Included is the sale of farmland, farmhouse and any other farm buildings.
- **Machinery and equipment traded-in.** Included is the value of farm machinery and equipment traded-in.
- **Machinery and equipment sold outright.** Included are receipts for machinery and equipment sold outright.
- **Breeding and replacement livestock.** Includes the value of breeding and replacement livestock sold. Excluded is the value of culls sold for slaughter. Sales of culls are recorded as livestock (beef or hog) income.
- **Other farm assets.** Included are sales of stocks, shares, bonds, Guaranteed Investment Certificates (GICs) and mutual funds. Excluded are withdrawals from RRSPs, NISA, CAIS and CSRA accounts.

**Current assets.** Unrestricted cash and any other asset that, in the normal course of operations, is expected to be converted into cash or consumed in the production process within one year or within the normal operating cycle (where the cycle is longer than a year). Included are cash, savings, accounts receivable, supply inventories, market livestock and crops for sale. All items are valued at current market value.

- **Accounts receivable.** An amount owed to the business usually arising from the sale of goods or services. Included are uncollected receipts for grain and livestock sales, custom work and program payments.
- **Cash and short term investments.** Cash and short-term investments include cash and all investments purchased with farm profits due to mature within one year.
- **Crops for sale.** Includes the value of all harvested crops destined for market including greenhouse and nursery horticulture products.
- **Inputs.** Included are the value of supplies on hand (feed, fertilizer, fuel, seed, pesticides, wood used to heat buildings) and other supplies used for farm businesses.
- **Market livestock.** The value of livestock expected to be sold for slaughter: heifers for slaughter or feeding, steers, calves, pigs (excluding boars and sows), slaughter lambs, poultry, goats for meat and culls, etc.
- **Other current farm assets.** Other current assets include prepaid expenses and the value of unsold livestock products (e.g. milk, eggs, pelts, PMU).

**Current liabilities.** The portion of debt whose repayment period is less than 12 months and which is outstanding as of December 31. Not included are annual or semi-annual payments on long-term liabilities that will be due within the current year.

**Current market value.** The most probable price an asset would bring in a competitive and open market under all conditions required for a fair sale.

**Expenses (operating).** The business costs, generating a cash outlay, incurred by farm operators for goods and services used in the production of agricultural commodities. Capital cost allowances (depreciation), the value of inventory adjustments, NISA and CSRA contributions are excluded from the operating expenses.

- **Interest expenses.** Included is interest on money borrowed to earn farming income. Examples are interest charges on real estate mortgages and loans to buy farm machinery and equipment. Excluded are payments made on the principal portion of liabilities.

- **Family wages from the farm.** Gross wages and salaries paid to the operator, their spouse and never married children residing in the same household. Wages and salaries earned by family members and operators off the farm are excluded, as are wages and salaries paid to hired help.
- **Other expenses.** Included are expenses associated with crop production (e.g. fertilizer, lime, pesticides, insurance, seed and plants) and production of livestock (e.g. livestock and poultry purchases, feed, supplements, insurance, veterinary fees, medicine). Also included are items such as wages and salaries paid to hired help and other operators' families, machinery, truck and auto expenses (fuel, repairs, licences, insurance, rental and leasing expenses), utilities, custom work, property taxes and insurance for farm buildings. See the questionnaire for a breakdown of available expense variables.

**Farm type.** The farm type classification is self-reported, mainly based on the percentage of the sales of the major commodity (or commodity groups). For purposes of statistical tabulations, ten major farm types have been selected: grains and oilseeds; dairy; hog; beef; poultry; eggs; fruit; potato; vegetables; and greenhouse, nursery and floriculture. All other farm types not specified above are included in the category "other farm types".

- **Grains and oilseeds.** Farms with gross agricultural revenue of more than 50% from the sales of wheat, oats, field peas, dry beans, lentils, mustard, flaxseed, rapeseed (canola), corn for grain, soybeans etc. and mixed grains.
- **Dairy.** Farms on which more than 50% of the gross agricultural revenue (excluding dairy subsidies) is derived from the sale for milk and cream for both fluid and industrial milk purposes.
- **Hogs.** Farms with more than 50% of the gross agricultural revenue derived from the sale of hogs, weaners, market pigs, gilts, feeders, sows and boars, including the sales of cull hogs.
- **Beef.** Farms with more than 50% of the gross agricultural revenue derived from the sale of cattle, including beef cattle finishing, cattle feedlot operations, cattle for slaughter, dairy heifer replacement stock and semen.
- **Poultry.** Farms on which more than 50% of the gross agricultural revenue is derived from the sale of chickens, pullets, hens, cockerels, capons, commercial broilers and roasters. Also includes revenues from the sale of turkeys, geese, ducks and other fowl.
- **Eggs.** Farms on which more than 50% of the gross agricultural revenue is derived from the sale of eggs. Starting in 2002, hatcheries are included with this farm type – note that this information was not collected for hatcheries prior to 2002 for this survey.
- Poultry and Egg are published together, but separate estimates are available upon request.
- **Fruit.** Farms deriving more than 50% of the gross agricultural revenue from the sale of fruits.
- **Vegetables.** Farms deriving more than 50% of the gross agricultural revenue from the sale of vegetables (excluding potatoes and greenhouse vegetables).
- **Potato.** Farms deriving more than 50% of the gross agricultural revenue from the sale of potatoes.
- **Greenhouse, nursery and floriculture.** Farms deriving more than 50% of the gross agricultural revenue from the sale greenhouse and nursery products, including vegetables, sod and flowers.
- **Other.** All farms not included in the classifications above are considered other farm types. Included are farms with revenues principally from the sale of other livestock and associated products (horses, ponies, furs, sheep and goats, bees and honey, aquaculture [fish], pregnant mare's urine [PMU], other livestock such as ostriches, emus and llamas, mixed livestock and other mixed operations). Included are revenues from the sale of other crops and associated products (hay, forages, small seeds, ginseng, sugar beets, tobacco, mushrooms, spice crops, bulbs, and forest and maple products). Also, includes miscellaneous revenues for agricultural custom work and agricultural rental income.

**Long-term assets.** An asset that has a useful life greater than one year. Such an asset, which can be either a tangible or intangible item, is usually not purchased for resale, but is to be used over time to produce saleable products. Included are land and buildings, machinery and equipment, quota and productive assets such as a breeding herd and investments. All items are valued at current market value. Also included is the value of producers' Net Income Stabilization Account (NISA), and Compte de stabilisation du revenu agricole (CSRA) accounts in Quebec.

- **Long-term investments.** Long-term investments of the operation include all money investments due to mature after December 31 of the reference year, such as bonds, shares, long-term Guaranteed Investment Certificates (GICs), mutual funds and co-operative shares.
- **Other long-term farm assets.** Includes off-farm site warehouses, grain condominiums and other buildings owned by operations, as well as nursery products such as trees and shrubs (other greenhouse and nursery horticulture products are included in current assets as inventory under crops for sale).

**Long-term liabilities.** That portion of a debt, with a maturity date beyond the current year or beyond the normal operating cycle (where the cycle is longer than a year), which is outstanding as of December 31.

**Net cash farm income.** Revenue (operating) minus expenses (operating), excluding capital cost allowances (depreciation), the value of inventory adjustments, NISA and CSRA withdrawals.

**Net worth.** The difference between the market value of the farms assets and the value of the liabilities.

**Revenues (operating).** The revenues generated from the sale of agricultural commodities and services, as well as agricultural payments and subsidies.

- **Farm sales.** Included are revenues from sales of grains, oilseeds and specialty crops, dairy products, hogs, cattle, poultry, eggs, horticulture products, and other commodities and services as outlined in the description of farm types.
- **Program payments.** Direct program payments to producers represent the amounts paid under various government agricultural programs. Only those payments related to current agricultural production and paid directly to individuals involved in agricultural production are included. These cover:
  - subsidies to encourage production;
  - subsidies to compensate producers for low market returns;
  - payments to stabilize income;
  - subsidies to reduce expenditures on farm inputs; and
  - payments to compensate producers for crop or livestock losses caused by extreme climatic conditions, disease or other reasons.

These payments may also include compensation received for crop damage due to wildlife or for leaving the farmland in its natural state for wildlife.

Program payments include payments tied to current agricultural production and paid directly to farmers. However, it does not attempt to cover all payments made to farmers, nor does it represent total government expenditure under all assistance programs. For example, the Canadian Farm Families Options Program announced in July 2006 is not included because it has been determined not to be business income for statistical purposes. Withdrawals from NISA and CSRA are also excluded.

Examples of included programs are:

- Canadian Agriculture Income Stabilization (CAIS);
- Canadian Farm Income Program (CFIP);
- B.C. Whole Farm Insurance Program (WFIP);
- Alberta Farm Income Disaster Program (AFIDP);
- Ontario Farm Income Disaster Program (OFIDP);
- Quebec's *Assurance stabilisation des revenus agricoles* (ASRA);
- Unseeded acreage payments;
- Assistance for clearing land;
- Government grants and tax rebates (Goods and Services [GST], fuel tax and property tax).
- private hail insurance;
- tax rebates (e.g., fuel tax, property tax);
- Business Risk Management (BRM);
- Farm Income Payment Program (FIP);
- BSE (Bovine Spongiform Encephalopathy) disease
- Grains and Oilseeds Payment Program (GOPP)

**Revenue class.** Predetermined levels of total operating revenues. These levels are:

\$10,000 to \$24,999

\$25,000 to \$49,999

\$50,000 to \$99,999

\$100,000 to \$249,999

\$250,000 to \$499,999

\$500,000 to \$999,999

\$1,000,000 and over

**Total assets.** Included are all "tangible and intangible items of value" as of December 31. It is the sum of current assets, breeding livestock, machinery and equipment, quota, land and buildings, NISA, CSRA and other financial investments.

**Total liabilities.** Include all obligations of a business arising from past transactions that are to be paid to various lenders in the future. These lenders include the federal government (Farm Credit Canada, Advance Payments Program or the Spring Credit Advance Program), provincial governments, chartered banks, trust companies, treasury branches, *caisses populaires*, credit unions, machinery and supply companies and private individuals. Total liabilities are the sums of current and long-term liabilities.

# Farm Financial Survey

## TO THE RESPONDENT:

This questionnaire is to assist you in answering a telephone survey. Complete this form and keep it by your telephone. An interviewer from Statistics Canada will telephone you **between July and August** for this information.

**DO NOT MAIL** this questionnaire. Please retain for your personal records.

Use your records, if possible. Otherwise, enter your best estimate.

**All information will be kept confidential under the *Statistics Act*.**

**Questions refer to the calendar year 2007.**

If information is not kept on a calendar year basis, please report for your latest fiscal year end.

In all cases, record the year end for the financial information you provide →

**CONFIDENTIAL** when completed

**Disponible en version française.**

009					
	Day	Month	Year		

This survey is conducted under the authority of the *Statistics Act*, Revised Statutes of Canada, 1985, c. S-19. Completion of this questionnaire is a legal requirement under the *Statistics Act*.

### CHARACTERISTICS OF THE OPERATOR/OPERATION

• Report questions 1 to 6 as of **December 31, 2007**

A FARM OPERATOR is an individual responsible for the day-to-day operation of the farm; who participates in the decisions to borrow money; to rent, buy or sell assets; and to reduce debts. An operation may have more than one operator but only one questionnaire is to be completed for each operation.

1. How many operators 18 years of age and over were responsible for this operation? .....

2. What was the age of:

a) The oldest operator .....

b) The youngest operator (*minimum age of 18*) (*if only one operator enter age under oldest operator*) .....

3. How many years has the most experienced operator on this farm managed a farm business? .....

4. Which of the following best described this operation? ("X" one circle only)

• Report family and hobby farms in 4 a) to 4 c)

For the Farm Financial Survey, **FAMILY** is defined as the operator, the operator's spouse and never married children residing in the same household. For corporations report for an operator and their **FAMILY**.

a) Sole Proprietorship .....  056  3

b) Corporation (Ltd. Co.) .....  4 — What is your **FAMILY's** percent ownership of this operation? .....  %

c) Partnership .....  5 — What is your **FAMILY's** percent ownership of this operation? .....  %

d) Cooperative and communal operations (e.g., Hutterite colonies) .....  6 — (GO TO PAGE 3)

e) Other (*please specify*)  078 .....  7

5. How many members are in the operator's **FAMILY**? .....

**LAND USE**

• Round to the nearest whole number

1. How will you report land area? 199  1 acres  
 ("X" one circle only) →  2 hectares  
 3 arpents (*Quebec only*)

**CROPLAND** includes tame hay, field crops, tree fruits or nuts, berries or grapes, vegetables, seed, sod, greenhouse or nursery products, mushrooms and Christmas trees.

2. For the **total land area** used by this operation, as of **December 31, 2007** (including all land such as cropland, woodland, improved and unimproved pasture, summerfallow, etc.) how much was:

	Total land area as of December 31, 2007	Total area of CROPLAND as of December 31, 2007
a) Owned • <b>Exclude</b> land rented or leased <b>TO</b> others .....	121	115
b) Rented <b>FROM</b> others (with or without a written agreement) • <b>Include</b> governments and other sources .....	102	116
c) <b>Total land operated</b> (sum of 2 a) and 2 b)) • <b>Exclude</b> land rented or leased <b>TO</b> others .....	195	194

3. Of the total area of **cropland** (reported in Box 194 above), what was the total area seeded for grains and oilseeds? 192

4. What was the **total area of cropland** (reported in Box 194 above) **INSURED** under provincial crop insurance? 114

5. **PRAIRIE PROVINCES ONLY:** Of the total land operated (reported in Box 195 above), what was the total area of **summerfallow**? 104

6. How much land owned by this operation was rented or leased **TO** others as of **December 31, 2007**? 103

7. Of the total area of cropland **OWNED** (reported in Box 115 above) what is your best estimate of the average price per acre (hectare/arpent)?  
 • Report at **current market value**  
 • **Exclude** the value of buildings .....

Price per Acre (hectare/arpent)	
133	Dollars
	.00

8. Did you pay cash for the cropland rented **FROM** others (reported in Box 116 above)?  
134 YES  1 NO  3 (GO TO PAGE 4)

9. Of the total area of cropland rented **FROM** others (reported in Box 116 above) for cash, what was the average rental price per acre (hectare/arpent) in **2007**?  
 • **Exclude** the value of buildings .....

135	Dollars
	.00

**LIVESTOCK AND POULTRY**

1. Did the operation custom or contract feed any livestock for others on **December 31, 2007**?

- **Exclude** all animals OWNED by your operation

**676** YES  1

NO  3 (GO TO QUESTION 2 BELOW)

(please specify type(s) and number(s) of livestock custom or contract fed)

**S676**

677

2. Did the operation **OWN** any livestock or poultry on **December 31, 2007**?

- **Include** all animals OWNED by this operation whether they are on your land or on land **not** owned by you
- **Exclude** all animals on your land which are not owned by you (Box 677 above)

**170** YES  1

NO  3 (GO TO PAGE 5)

How many of the following did this operation own on **December 31, 2007**?

**PART I. CATTLE**

- a) Bulls, 1 year and over .....
- b) Cows mainly for dairy
  - **Include** dairy replacement heifers .....
- c) Cows mainly for beef
  - **Include** beef replacement heifers .....
- d) Steers and Heifers, 1 year and over for slaughter or feeding .....
- e) Calves, under 1 year .....

**Total Number on  
December 31, 2007**

674

172

173

174

175

**PART II. PIGS**

- f) Boars, 6 months and over .....
- g) Sows for breeding and bred gilts .....
- h) All other pigs .....

675

179

176

**PART III. SHEEP AND LAMBS**

- i) Sheep and lambs .....

182

**PART IV. POULTRY**

- j) Layers .....
- k) Broilers .....
- l) Other poultry (e.g., breeders, turkeys, pullets, etc.)

188

189

198

(please specify) **080**

**PART V. HORSES**

- m) Horses and ponies .....

187

**PART VI. OTHER LIVESTOCK**

- n) Other livestock (please specify) **081**

184

**CAPITAL INVESTMENTS**

- **Exclude** GST, HST, PST, Quebec Sales Tax
- Report to the nearest \$1,000
- Report for the calendar year **2007**

1. During **2007**, did this operation invest any money in capital items or improvements?

**200** YES  1

NO  3 (GO TO PAGE 6)

2. What was the amount of capital invested in **2007** for the following:

Capital Investments in 2007	
<b>201</b>	000
<b>203</b>	000
<b>212</b>	000
<b>213</b>	000
<b>204</b>	000
<b>214</b>	000
<b>202</b>	000
<b>205</b>	000
<b>206</b>	000

- a) Farm real estate purchased .....
- b) House construction or **major** renovation .....
- c) Manure storage construction or **major** renovation .....
- d) Pesticide, chemical or fuel storage construction or **major** renovation .....
- e) Other building construction or **major** renovation (e.g., barns, storage sheds, machine sheds, etc.) .....
- f) Environmental protection improvements: shelterbelts, windbreaks, buffer strips or fences for waterways protection .....
- g) Other land improvements: irrigation, orchard planting, draining, clearing of land, fences for purposes other than environmental protection .....
- h) Breeding and replacement livestock intended to be on the farm for more than 1 year
  - **Exclude** poultry .....
- i) Quota purchased separately from other assets .....

- j) Farm machinery and equipment purchased or leased in **2007**
  - Report the full purchase or lease price **BEFORE** trade-in or any downpayment
  - **Exclude lease payments**
  - Specify using list of assets below

- |  |  |
|--|--|
| <b>71</b> Cars used in the farm business           | <b>84</b> Other seeding equipment                      |

3. How much money did you **receive in 2007** as a government grant or contribution for **environmental protection purposes** to reduce the cost of any of the capital investments previously reported? .....

<b>222</b>	000
------------	-----

**CAPITAL SALES**

- **Exclude** GST, HST, PST, Quebec Sales Tax
- Report to the nearest \$1,000
- Report for the calendar year **2007**

1. During **2007**, did this operation sell or trade-in any capital items?

**230** YES  1      NO  3 (GO TO PAGE 7)

2. What was the amount of capital sales in **2007** for:

- a) Land and buildings .....
- b) Farm machinery and equipment traded-in
  - **Include** cars and trucks used in the farm business .....
- c) Farm machinery and equipment sold outright
  - **Include** cars and trucks used in the farm business
  - **Exclude** trade-ins .....
- d) Quota sold separately from other assets .....
- e) Breeding and replacement livestock
  - **Exclude** culls for slaughter and poultry .....
- f) Other farm assets sold (e.g., stocks, bonds, GICs, mutual funds)
  - **Exclude** RRSPs
  - **Exclude** **NISA** (Net Income Stabilization Account) and **CSRA** (Compte de stabilisation du revenu agricole) (*these programs to be reported on page 12*)

**ASSETS**

1. What was the value of the following assets of this operation on **December 31, 2007**?

• **Report at CURRENT MARKET VALUE**

• Report to the nearest \$1,000

• **Exclude** assets not from this operation (*these assets to be reported in Box 694, page 14, Question 2*)

**LIVESTOCK ASSETS**

Value of Assets on December 31, 2007	
308	
	000
662	
	000

- a) Market livestock
  - **Include** heifers for slaughter or feeding, steers, calves, pigs, slaughter lambs, all poultry, goats for meat, culls and other market livestock
  - **Exclude** boars, sows and contract livestock
  - Report **breeding and replacement** livestock below .....
- b) Breeding, replacement and other livestock not considered market livestock
  - **Include** all livestock and fur animals for breeding or replacement purposes (e.g., cows, sows, ewes, horses for PMU, honey bees, bison, llamas, ostriches, race and riding horses, etc.) .....

**CURRENT/SHORT-TERM ASSETS (LESS THAN ONE YEAR)**
