Service Bulletin - Surface and Marine Transport The Canadian Passenger Bus and Urban Transit Industries

2007 (Preliminary) and 2006 (Final)

Highlights

- The financial performance of the Canadian passenger bus and urban transit industries continued its upward trend in 2007, fuelled by strong growth in government operating and capital funding.
- Total revenue for the industries (comprised of five bus industries and bus-related activities in two non-bus industries), rose to \$10.2 billion in 2007, up 6.2% from 2006. Gains were realized in all industries, with the exception of the school and employee bus industry and the category called 'other' under bus activity in non-bus industries.
- Total expenses rose 3.9% to \$8.2 billion in 2007. As a result of the strong growth in revenue in comparison to expenses, net income for the bus and non-bus industries climbed 16.4% to \$2.1 billion.
- Both operating and capital subsidies from various levels of government rose in 2007, with operating subsidies rising to \$2.6 billion in 2007, representing an increase of 13.6%. Capital subsidies also increased by 10.0%, from \$1.7 billion in 2006 to \$1.9 billion in 2007.
- Human resource expenses continued to account for more than 60% of operating expenses for all bus and non-bus industries.
- Ridership levels for companies offering urban transit services increased to 1.7 billion passengers in 2007, up 4.9% from the 2006 level.
- The passenger bus and urban transit industries continued to make significant capital-related investments in 2007, spending more than \$2.4 billion on the purchase of buses and other rolling stock as well as on other capital related expenditures. The largest investments occurred within the urban transit industry, which saw its overall capital expenditures rose by 15.4% to \$2.2 billion. Slightly less than half (48.0%) of the urban transit capital expenditures were spent on rolling stock.
- Total employment in the bus and non-bus industries fell 1.9% in 2007 to 92,819. However, the average expenditure per employee rose by 8.3%, from about \$48,306 to about \$52,322.
- Ontario still accounted for over 44.0% of the total operating revenues of the urban transit industry. Quebec followed at 26.4%.

How the information is presented

Statistics Canada uses the North American Industrial Classification System (NAICS) to classify all companies operating in Canada. For passenger bus and urban transit, there are five industries as follows:

485110 - Urban transit systems

485210 - Interurban and rural bus transportation (major activity is scheduled intercity services)

485410 - School and employee transportation

485510 - Charter bus industry

485990 - Other transit and ground passenger transportation (i.e. companies whose major business activity is the provision of shuttle services)

There are some urban transit, school bus and passenger bus operations that generate economic activity but are not included in one of the five NAICS categories. To provide data users with a more complete picture of passenger bus and urban transit activities, each table presents information that includes the five NAICS industries as well as other activity that has been identified and for which data could be collected for operations that are outside of the five NAICS industries.

There is no duplication of activity across groups (e.g. urban transit operations in the "Other" category are not duplicated in the urban transit NAICS).

The Canadian passenger bus and urban transit industries can be looked at either by "sector" (i.e., by main company activity as classified under NAICS), or by "activity" (or service lines) performed.

Analysis

Financial performance

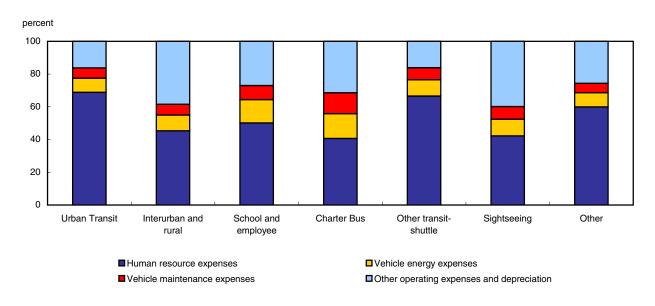

The financial performance of the Canadian passenger bus and urban transit companies, in terms of total revenue, continued its upward trend in 2007. During the year, total revenue rose to \$10.2 billion, up 6.2% from 2006. Gains were realized in all industries, with the exception of the school and employee bus industry and bus activity in the non-bus industry classified as "other".

Overall, the annual growth rate in total expenses lagged behind total revenue in 2007. Total expenses for all the industries rose 3.9% to \$8.2 billion. As a result of the strong growth in total revenue over total expenses, net income for the bus and non-bus industries climbed 16.4% to \$2.1 billion. The higher gain in net income was attributed mainly to two industries: urban transit and other transit and ground passenger transportation (Table 1-1).

The urban transit industry continued to be the dominant industry in 2007, representing 70.2% of the total revenue of all the industries. For 2007, total revenue for the urban transit industry rose 7.9%, to \$7.2 billion in 2007. Of this total, 61.2% came from operating and capital subsidies. The school and employee bus industry followed at a distant second, with 15.7%. The overall increase in total revenue for the urban transit industry may be attributed to a number of factors. These included increases in both operating and capital subsidies from various levels of government, a rise in the number of companies, increased ridership, and increased costs of tickets and transit passes. Of these factors, operating and capital funding from federal, provincial/territorial and municipal governments had the largest impact on total revenue. Despite its heavy reliance on these subsidies, the industry continued to show strength in 2007 as revenues from its transit operations (composed of urban transit, commuter and services for persons with disabilities and seniors) rose 0.7% to \$2.8 billion.

Human resource expenses continued to be the main expense incurred by all bus and non-bus industries, representing 61.7% of total operating expenses in 2007. However, this figure varied between the industries. For example, wages, salaries and benefits in the urban transit industry accounted for 68.8% of its total operating expenses, whereas in the charter bus industry, these expense items covered only 40.6%. Explanations for the variation may be due to the incorporation of different operating procedures and varying compensation levels. A breakdown of the major types of expenses incurred by the industries is provided in Chart 1 below.

Chart 1
Proportion of total operating expenses by industry

Companies offering urban transit services accounted for about 49.1% of the operating revenues (excluding operating subsidies) in 2007. This was followed by companies offering school bus transportation services at 24.0%.

In terms of passengers carried, urban transit service operators carried over 1.7 billion passengers in 2007, a 4.9% increase from 2006.

Capital investment

The Canadian passenger bus and urban transit industries continued to make capital-related investments in 2007 in an effort to acquire and/or upgrade their physical assets. For the year, the industries spent more than \$2.4 billion on the purchase of buses and other rolling stock and other capital related expenditures, up 11.9% over 2006 levels. The distribution of the investments between the two asset types was fairly close, with fleet purchases having a slight edge at 51.1%.

The urban transit industry accounted for 91.7% of total capital expenditures (see Table 3), propelled largely by capital funding from the various levels of government. This industry spent about \$1.1 billion on the acquisition of urban transit buses and other rolling stock while the school bus industry invested just over \$115 million. The other transit-shuttle bus industry spent the least amount on the acquisition of buses and other rolling stock.

Employment

Employment in the bus and non-bus industries, based on the number of full-time equivalents, fell 1.9% in 2007 to 92,819 (see Table 4). More than half (51.1%) of the total employees were employed in the urban transit industry. With the exception of the school and employee bus industry, which fell 12.9%, employment in all other bus industries increased in 2007. The drop in employment for the school bus industry coincides with a decrease in the number of enrolments of primary and secondary school students. For the 2006-2007 school year, enrolment fell by 1.0%.¹

From a compensation perspective, total compensation in the bus and non-bus industries rose 6.3% to \$4.9 billion in 2007. As a result of the increase in compensation, the average expenditure per employee rose to \$48,306, up 8.3% from 2006, although there were variations within the industries. For example, the average expenditure per employee in the urban transit industry was over \$72,000, compared with about \$20,000 in the school and employee bus industry.

The fleet

The number of revenue equipment operated by the five bus industries, edged up 0.8% to 61,492 in 2007. About 59.0% of the fleet belonged to the school and employee bus industry, with the urban transit industry following at a distant second with about 28%. Table 5 shows the distribution of fleet by vehicle type. It should be noted that the figure reported here is less than the number of buses registered in Canada. However, the figure includes buses that are used to generate revenue, and excludes buses that are owned by private organizations or companies that use the vehicles to transport people and goods for private purposes (e.g. churches).

Fuel used for rolling stock

The five bus industries consumed varying amounts of fuel in 2007 in order to power their fleet. As can be seen in Table 6, diesel fuel continued to be the primary fuel source consumed, rising 7.3% to 858.6 million litres. More than half of the fuel was used by the urban transit industry, which saw its consumption increase by 13.1% to 481.0 million litres.

^{1.} Centre for Education Statistics. Statistics Canada. Special tabulation 1997-2007.

The school and employee bus industry also consumed a sizable quantity of diesel fuel in 2007, though less than half the amount consumed by the urban transit industry. For the year, the school and employee bus industry consumed 226.6 million litres of diesel in 2007, a 2.5% drop from its 2006 level.

Revenues and expenditures by province and by geographic region

In addition to the revenue and expenditure findings at the national level, revenue and expenditures can also be observed at provincial/territorial and geographic region levels. Tables 7, 8 and 9 present information on the province and geographic region where the companies generated operating revenues and made expenditures. Non-operating expenses and revenues are not allocated on a geographic basis but are shown for Canada as a total.

The urban transit industry generated more revenue than the other bus industries and non-bus industries combined (Table 7). Ontario continued to dominate in both urban transit and other bus industries, with 44.0% and 40.6% of total operating revenues, respectively, for the two industries. This was followed by Quebec, with 26.4% and 25.4%, respectively. Both provinces also saw year-over-year operating revenue increases surrounding the urban transit industries, with Ontario rising 2.5% to \$2.3 billion and Quebec rising 14.9% to \$1.4 billion in 2007.

Table 8 presents operating revenue information by activity and by region. Over 33% of the operating revenue in the regions was generated from urban transit services. Ontario accounted for 48.5% of the operating revenues from urban transit services in 2007, followed by Quebec at 24.6%. These two regions accounted for the majority of the \$2.8 billion in other operating revenues and operating subsidies as well, with Ontario comprising 37.4% and Quebec with 27.7%.

School bus services also accounted for a sizeable portion of the operating revenue within each of the regions, typically ranking as the third largest revenue source. The only exception was British Columbia which saw a stronger reliance on revenues from scheduled intercity and motor coach charter services over school bus services.

Human resource expenditures, which constituted over 60% of total operating expenditures, rose in every region (Table 9). However, there were variations across the regions. The Prairies region saw the largest increase in human resource expenditures at 11.0%, followed by British Columbia and Atlantic at 9.5% and 7.5%, respectively. Both Quebec and Ontario regions grew below the national average of 6.3%.

Maintenance cost by vehicle type

Maintenance expenses decreased to \$556.7 million in 2007, a marginal drop of 0.1% from 2006 (Table 9). From a geographic region perspective, maintenance expenses rose in the Atlantic, Quebec and British Columbia regions, while falling in Ontario and in the Prairies.

Another way in which vehicle maintenance expenditures can be examined involves observing costs on a per kilometre basis for the three main bus types – motor coaches, school buses and urban transit buses. Within each of these three bus types, there are different vehicle lengths, model types and passenger capacities. However, the data presented in the table represent an aggregate average regardless of model variations. Maintenance costs include parts, shop supplies, tires, and tubes. Direct labour costs are excluded from the maintenance cost figure, although labour costs stemming from repairs by third parties are included.

As illustrated in Table 10, maintenance costs per kilometre rose from \$0.25 to \$0.26 for motor coaches, remained unchanged at \$0.15 for school buses and fell to \$0.30 from \$0.33 for urban transit buses. Over the five year period from 2003 to 2007, maintenance costs per kilometre for motor coaches and school buses have remained relatively stable. For motor coaches, costs per kilometre have risen by only two cents, while increasing one cent for school buses and even decreasing one cent for urban transit buses.

Appendix

Survey Data Accuracy Measures

While considerable effort is made to ensure high standards throughout all stages of collection and processing, the estimates provided in this Service Bulletin are inevitably subject to a certain degree of non-sampling and sampling errors. Examples of non-sampling errors are coverage error, data response error, non-response error and processing error. To the maximum extent possible, these errors are minimized through careful design of the survey questionnaire, verification of the survey data, and follow-up with delinquent respondents to maximize response rates.

Sampling error can be measured by the standard error (or standard deviation) of the estimate. The coefficient of variation (CV) is the estimated standard error percentage of the survey estimate. Estimates with smaller CVs are more reliable than estimates with larger CVs. For the 2007 reference year, the CV for total revenue at the Canada level is 0.004. Generally, any estimate with a CV value of less than 1.1 is considered to be of excellent quality. The coefficients of variation for the estimates of total revenue by NAICS are provided below.

Industry code description Total revenue (Coefficient of variation) Urban Transit systems (NAICS - 485110) Α Interurban and Rural Bus transportation (NAICS – 485210) Α School and Employee Bus transportation (NAICS – 485410) Α Charter Bus industry (NAICS - 485510) Α Other Transit and Ground Passenger transportation (NAICS – 485990) Α Sightseeing (NAICS – 487110) Α Canada Α

where:

 $0 \le CV < 0.05$ is considered an A; $0.05 \le CV < 0.10$ is considered an B; $0.10 \le CV < 0.15$ is considered an C; $0.15 \le CV < 0.25$ is considered an D; $0.25 \le CV < 0.35$ is considered an E; $CV \ge 0.35$ is considered an F. Release date: September 2009

Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- p preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the Statistics Act
- x suppressed to m

The content of this electronic publication may be reproduced, in whole or in part, and by any means, without further permission from Statistics Canada, subject to the following conditions: that it be done solely for the purposes of private study, research, criticism, review or newspaper summary, and/or for non-commercial purposes; and that Statistics Canada be fully acknowledged as follows: Source (or "Adapted from", if appropriate): Statistics Canada, year of publication, name of product, catalogue number, volume and issue numbers, reference period and page(s). Otherwise, no part of this publication may be reproduced, stored in a retrieval system or transmitted in any form, by any means—electronic, mechanical or photocopy—or for any purposes without prior written permission of Licensing Services, Client Services Division, Statistics Canada, Ottawa, Ontario, Canada K1A 0T6.

Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner. To this end, Statistics Canada has developed standards of service that its employees observe.

To obtain a copy of these service standards, please contact Statistics Canada toll-free at 1-800-263-1136. The service standards are also published on www.statcan.gc.ca under "About us" > "Providing services to Canadians."

Note of appreciation

Canada owes the success of its statistical system to a long standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.
