Note of appreciation

Canada owes the success of its statistical system to a long standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

User information

Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0^s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- p preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- E use with caution
- F too unreliable to be published

Notes: Data in tables may not sum due to rounding.

Charts

1.	Total cargo handled at Canadian ports and marine terminals	12
2.	International cargo handled at Canadian ports and marine terminals	13
3.	Domestic cargo handled at Canadian ports and marine terminals	13

Highlights

- After increasing for four consecutive years, total cargo handled at Canadian ports and marine terminals decreased 1.1% in 2006, due to decline in both domestic and international shipments.
- The decline in the domestic cargo (-3.0%) was the major contributor to the overall decrease in waterborne shipments in 2006. Total international cargo handled went down by 0.3%.
- Canadian ports handled more than 3.9 million twenty-foot equivalent units (TEUs) of containers, an increase of 3.0% from 2005. The amount of cargo in these containers was 33.0 million tonnes, up 3.7% from the year before.
- Total tonnage shipped to and from the United States slipped 1.5% in 2006 after reaching the highest level in 2005 for the past 15 years. Total shipments declined for all regions of the United States (Atlantic and Gulf, Great Lakes and Pacific). Shipments to and from the United States represented 38.4% of international tonnage. Decreases in the shipments of crude petroleum, wheat, iron ores and concentrates and other basic chemicals are among the major contributors to the overall decline.
- International inbound and outbound waterborne shipments with the rest of the world (other than the United States) increased 0.6% to 203.3 million metric tonnes in 2006. Gains in the shipments of wheat, iron ores and concentrates, colza seeds (canola) and iron and steel – primary or semi-finished were offset by decreases in the volumes of crude petroleum, potash and barley.
- The share of the total cargo handled by the ports and marine terminals of the 19 Canadian Port Authorities (CPAs) went up to 54.4% in 2006 from 53.2% in 2005. Loadings and unloadings at CPAs grew 1.1% this year as compared to a decrease of 3.5% in loadings and unloadings at non-CPA ports.
- The Port of Vancouver, the country's busiest port, handled 80.4 million metric tonnes of cargo, up 2.4% from 2005. This increase was attributed to higher international shipments.
- In terms of Canada's largest ports, as measured by cargo handled, the biggest drop in tonnage occurred at Come-By-Chance, where it declined 11.2 million metric tonnes or 28.7%, the third consecutive annual decrease. The decline was mainly due to lower domestic and international shipments of crude petroleum.
- The tonnage handled at the Port of Saint John, N.B., dropped 13.7% or 3.8 million metric tonnes mainly due to a decline in inbound shipments of crude petroleum, petroleum based products (gasoline and aviation turbine fuel and fuel oils) and other basic chemicals.
- The freight handled at Fraser River Port dropped 1.5 million metric tonnes or 9.9% in 2006 due to lower international outbound and inbound traffic. A reduced number of containers handled at the port also contributed to the decline.
- The port of Prince Rupert experienced the biggest gain, where the tonnage increased 3.2 million metric tonnes or 73.8%, in 2006. Increased exports of coal and wheat were the main contributors to the gain.
- The tonnage handled at Port-Cartier increased 2.3 million metric tonnes or 14.8% in 2006. The gain was due to increased international outbound shipments of iron ores and concentrates.

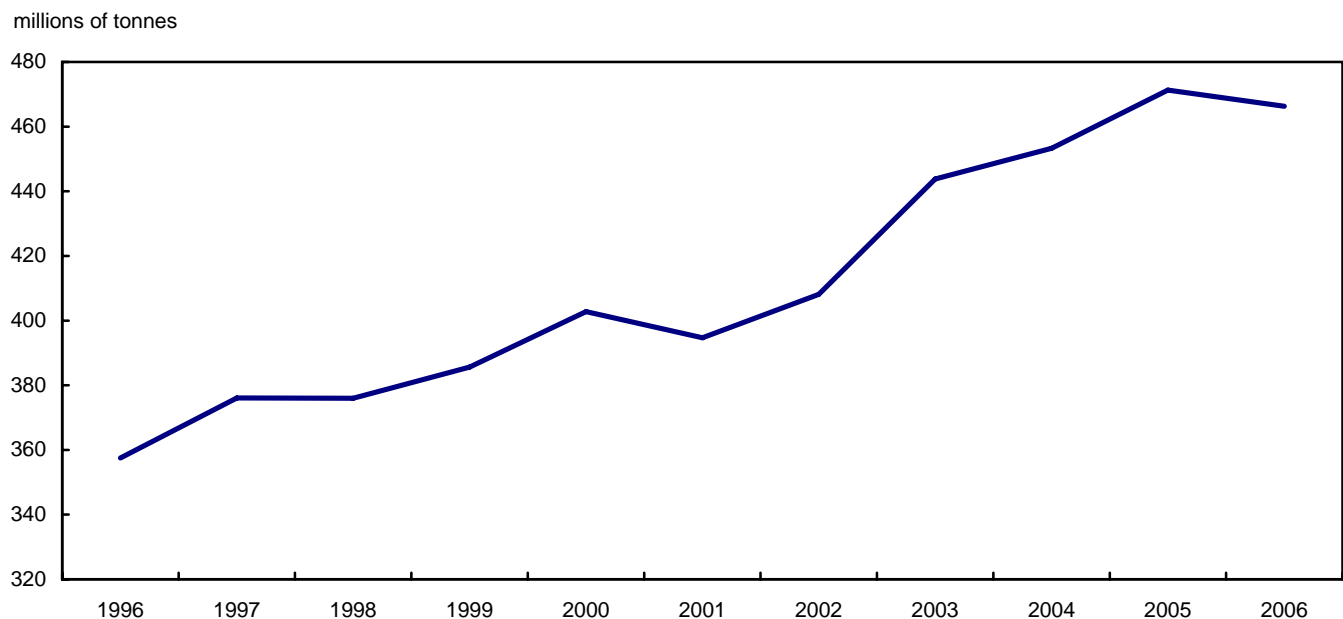

- The port of Sept-Îles, including Pointe-Noire, handled more than 23.3 million tonnes of cargo in 2006, up 5.0% from 2005. Increased tonnage of international shipments of iron ores and concentrates and alumina were the major contributors to the gain.

Shipping in Canada 2006 (preliminary)

The total tonnage handled by Canadian ports and marine terminals fell in 2006 after 4 successive years of growth. This came at a time when the national economy experienced a slowing pace in the expansion of real GDP of 2.7% in 2006; down from 2.9% in 2005.¹ Despite higher commodity prices and stronger exchange rate, the nominal value of total merchandise trade grew at a slower pace 2.2% in 2006 compared to 6.2% the previous year. International trade in goods with the United States decreased 0.4% to \$625.9 billion due to lower exports.² At the same time, growth in the trade volume with the rest of the world³ (\$234.2 billion) decelerated to 10.0% in 2006, from 11.3% in 2005. A slowing in nominal merchandise trade growth during the year may have contributed to reduced activity at Canada's ports and marine terminals.

The total cargo handled at Canadian ports and marine terminals dropped 1.1% to 466.3 million metric tonnes (Mt) in 2006. Decreases in both international (between Canadian and foreign ports) and domestic (between two Canadian ports) cargoes contributed to the decline. International cargo was down 0.3% to 330.1Mt in 2006. Similarly, domestic tonnage handled fell 3.0% to 136.2Mt in 2006.⁴

Chart 1
Total cargo handled at Canadian ports and marine terminals

1. Canadian Economic Observer, April 2008. Statistics Canada catalogue No. 11-010-XIB. Comparative analyses based on data taken from various issues of the Canadian Economic Observer.
2. The volume of exports to the US came down to \$361.0 billion in 2006 from \$368.6 billion in 2005.
3. The nominal value of total merchandise trade with the rest of the world, excluding the European Union (EU) and the OECD (Organization for Economic Co-operation and Development) countries, increased 13.4% in 2006 compared to 18.2% in 2005.
4. Note that domestic cargo is handled twice by the Canadian ports and marine terminals system, once when loaded and again when unloaded.

Chart 2
International cargo handled at Canadian ports and marine terminals

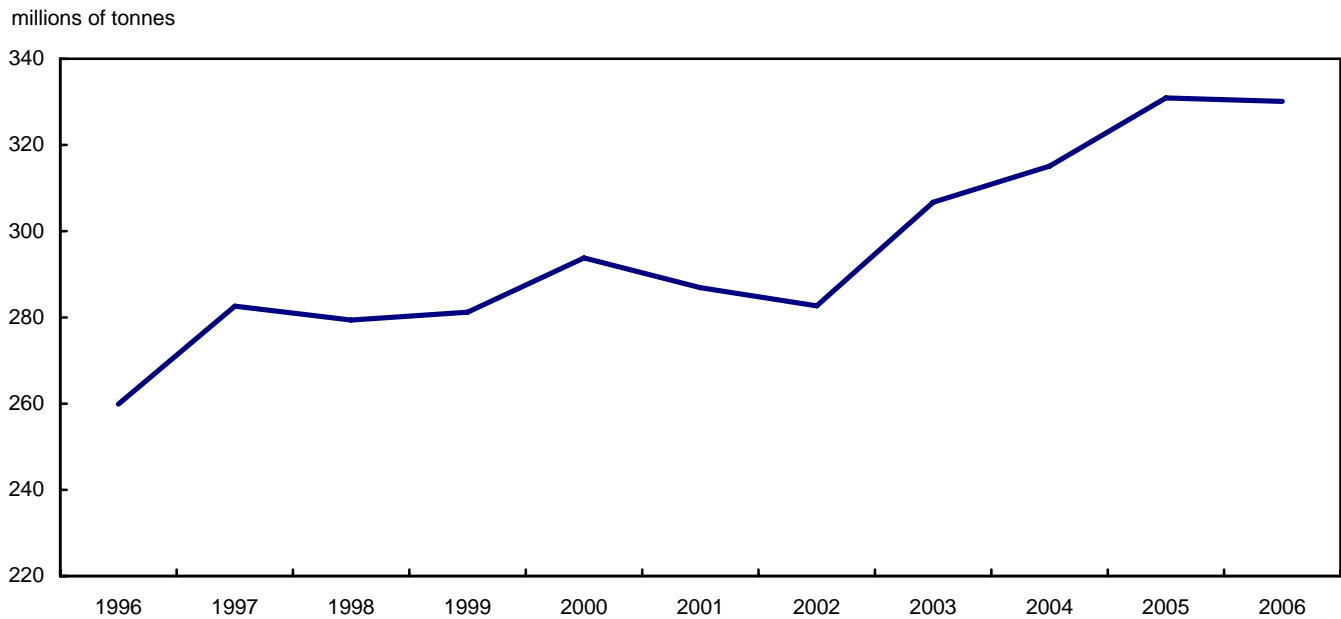

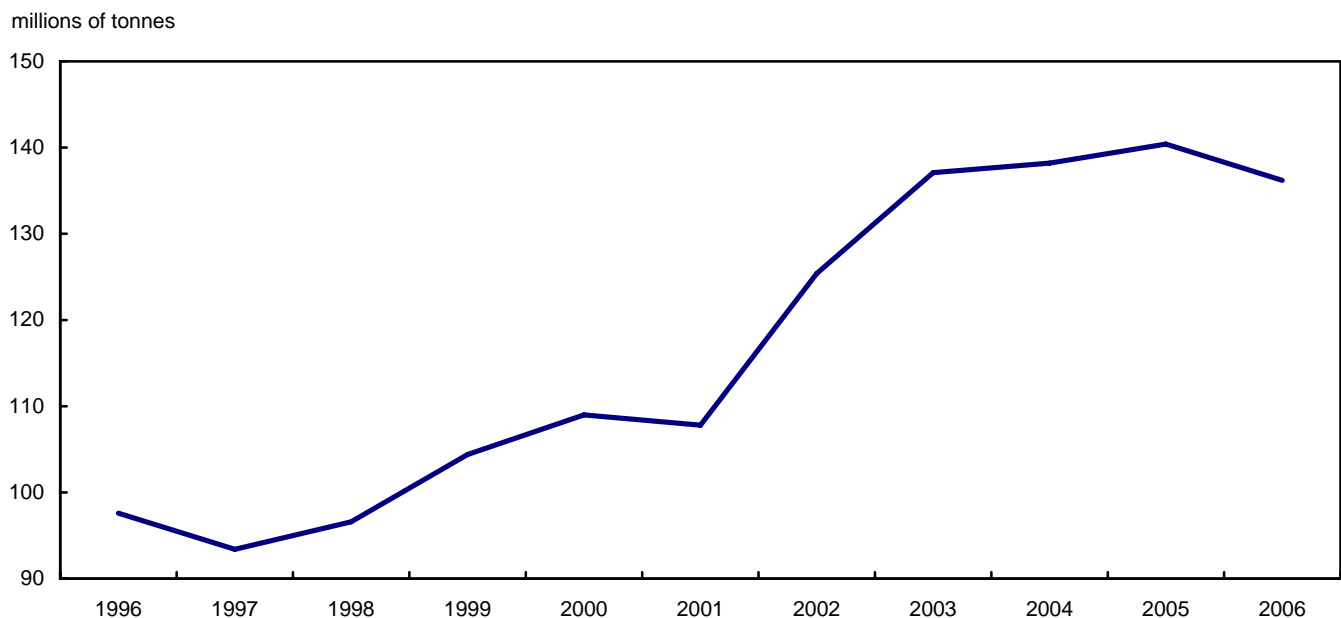

Chart 3
Domestic cargo handled at Canadian ports and marine terminals

International marine cargo

International cargo handled dropped due to a decline in inbound shipments in 2006. International cargo unloaded at Canadian ports fell 3.9% during the year. Crude petroleum (down 5.9Mt), which represented over 28.3% of the inbound cargo in 2006, was the largest contributor to the decline. Outbound cargo rose 2.1% to 206.0Mt in 2006.

The rise in outbound cargo was largely attributed to increased tonnage of iron ore and concentrates, wheat (each up 3.0Mt), colza seeds (up 1.4Mt) and stone, sand, gravel and crushed stone (up 1.2Mt). These four commodities accounted for about 31.0% of the total tonnage of outbound traffic.

Container traffic

International container traffic, both in terms of volume and tonnage, handled by Canadian ports and marine terminals, continued its upward trend in 2006. During the year, Canadian ports handled over 3.9 million twenty-foot equivalent units (TEUs), up 3.0% from 2005. The Port of Vancouver led the country's ports in container handling with 56.5% share of the total container traffic in 2006. Overall the tonnage of international containerized cargo went up 3.7% to 33.0Mt in 2006. Increases in both outbound and inbound containerized cargo handled took the activity to a new height. Leading the growth were containerized shipments to and from ports in the Atlantic and Gulf region of the United States which rose 0.9Mt. These were followed by the European (up 0.5Mt) and Central America and Antilles (up 0.4Mt) regions. Containerized cargo from Asia, accounting for 50% of the total international containerized shipments, fell by 0.1Mt to 16.5Mt in 2006.

Canada – United States cargo

Total shipments to and from the United States dropped 1.5% to 126.7Mt in 2006. Contributing to the decline were lower cargo movements from Canada to the United States which decreased 1.6% to 84.4Mt in 2006. Inbound cargo from the United States also contributed to the decline falling 1.3% to 42.3Mt in 2006. Despite this drop, traffic between Canada and the United States still accounted for about 38.4% of the total international shipments handled at Canadian ports.

Outbound shipments of crude petroleum, which accounted for more than a quarter of the total tonnage heading to the United States, fell 6.4%. Other commodities which contributed to the decline were gasoline and aviation turbine fuel, logs and other wood in the rough and other refined petroleum and coal products. Despite this, increased shipments of stone, sand, gravel and crushed stone, iron ores and concentrates and fuel oils to the United States were enough to partially offset the decline. Most of the outbound tonnage to the United States (63.6%) was destined for ports in the Atlantic and Gulf region.

The largest decline in inbound cargo from the United States was noted in the tonnage of iron ores and concentrates (down 1.1Mt) followed by wheat (down 0.7Mt), other basic chemicals (down 0.4Mt) and wood chips (down 0.2Mt). The quantity of coal, the commodity which accounted for over 40% of the total inbound tonnage from the United States, went up (0.7Mt). Cargo arriving from the United States Great Lakes region continued to account for the majority of the total inbound tonnage.

The share of Canada – United States cargo handled by Canadian registered vessels edged up slightly to 40.0% in 2006, from 39.6% in 2005. On the other hand, the share of United States-flag vessels declined slightly to 12.3% during the year compared to 13.1% in 2005. Foreign-flag ships carried the remaining cargo and their share increased to 47.7% in 2006, from 47.3% in 2005.

Canadian-flagged ships continued to handle most of the cargo (80.7%) in the United States Great Lakes region. However, the share of cargo handled by Canadian registered vessels in the Pacific region of the United States decreased to 29.2% in 2006, from 30.8 in 2005. Foreign-flag ships continued to dominate shipping activities (more than 90%) between Canadian ports and the Atlantic and Gulf region of the United States during 2006.

Canada – Overseas cargo

Total international cargo (to and from countries other than the United States) increased for the fourth consecutive year rising 0.6% to 203.3Mt in 2006. The growth in total overseas tonnage was due to an increase in outbound shipments which were more than sufficient to offset a decline in shipments received from the overseas ports.

International cargo from Canada to countries, other than the United States, increased 4.9% to 121.6Mt in 2006. The increase in outbound tonnage was attributed to higher shipments of wheat (up 3.1Mt), iron ores and concentrates (up 2.4Mt) and colza seeds [canola] (up 1.4Mt). The majority (49.1%) of the overseas outbound tonnage was destined for Asia followed by Europe (28.5%).

Total inbound shipments from overseas ports declined 5.2% to 81.7Mt in 2006. Decreases in the shipments of crude petroleum from ports in both Europe (down 3.7Mt) and Africa (down 1.3Mt) were the major sources of decline. Most of the tonnage arriving at Canadian ports from overseas originated from Europe (30.7%) and Africa (23.8%).

Vessels registered in Panama (21.8%), Hong Kong (10.8%), Liberia (9.9%), Greece (9.3%) and Bahamas (7.2%) continued to handle significant portions of the overseas cargo destined to or originating from Canada. Canadian flagged ships were of negligible importance in carrying overseas shipments.

Domestic Cargo

Domestic cargo handled at Canadian ports and marine terminals dropped 3.0% to 136.2Mt in 2006. The drop in volume of domestic cargo was the result of declines in the tonnages of crude petroleum (down 7.4Mt); wood chips (down 1.3Mt); stone, sand, gravel and crushed stone; and fuel oils (each down 0.6Mt). Increased quantities of wheat (up 2.6Mt); salt (up 1.5Mt); logs and other wood in the rough (up 0.7Mt); and other metallic ores and concentrates (up 0.5Mt) partially offset the decline.

In the Atlantic region the tonnage of domestic cargo handled dropped 8.0Mt to 39.0Mt in 2006. The commodities which contributed to the decline included crude petroleum (down 7.4Mt), fuel oils (down 0.6Mt), gasoline and aviation turbine fuel (down 0.5Mt) and limestone (down 0.4Mt). However, the amounts of salt and other metallic ores and concentrates handled in the region increased 0.3Mt and 0.2Mt, respectively.

Ports in the St. Lawrence region handled 2.1Mt (7.6%) more domestic tonnage to reach 29.5Mt in 2006. Increased tonnages of wheat (up 1.4Mt), salt (up 0.5Mt), other metallic ores and concentrates (up 0.4Mt) and stone, sand, gravel and crushed stone (up 0.2Mt) were primarily responsible for the rise. However, reduced amounts of limestone (down 0.2Mt) and logs and other wood in the rough (down 0.1Mt) handled in the region partially offset the gains.

Ports and marine terminals in the Great Lakes region handled more domestic cargo in 2006 (up 5.7%). Commodities primarily responsible for the increase included wheat (up 1.3Mt), salt (up 0.6Mt), iron and steel – primary or semi-finished and iron ores and concentrates (each up 0.3Mt). The increase was partially offset by the reduced tonnages of stone, sand, gravel and crushed stone (down 0.7Mt), coal (down 0.4Mt), other non-metallic minerals (down 0.3Mt) and metallic waste and scrap (down 0.2Mt).

Domestic tonnage handled at the ports in the Pacific region dropped 0.1% to 35.1Mt in 2006. The largest drop was observed in the amount of wood chips (down 1.4Mt) followed by stone, sand, gravel and crushed stone (down 0.3Mt). However, increased tonnages of logs and other wood in the rough (up 0.8Mt) and newsprint (up 0.4Mt) were enough to largely reduce the effect of the decline.

Port Authorities

Activity at the Port of Vancouver continued to grow in 2006, mainly due to increased volume of trade with Asia. Total cargo handled at the port increased 2.4% to 80.4Mt in 2006. Commodities that contributed to the increase were colza seeds [canola] (up 1.4Mt), wheat (up 0.6Mt), other manufactured and miscellaneous goods (up 0.5Mt), fresh, chilled or dried vegetables (up 0.4Mt) and articles of base metal (up 0.3Mt). Shipments of coal, the ports primary commodity⁵, declined 1.2Mt during the year, due primarily to the redirection of outgoing coal to other ports in the region. Other commodities which joined the decline included potash (down 1.1Mt), barley (down 0.5Mt) and wood chips (down 0.4Mt).

5. Coal represented about 30.0% of the total tonnage handled at the Port of Vancouver.

For the first time, the port's container traffic passed the 2 million TEUs mark. Increases in both inbound and outbound container traffic contributed to the rise. The total containerized tonnage rose 21.3% to 16.5Mt in 2006.

The port of Montreal/Contrecoeur handled 24.7Mt of cargo in 2006, an increase of 2.1% from the 2005 levels. Higher international shipments of gasoline and aviation turbine fuel, wheat and fuel oils were the main contributors. These gains were partially offset by declines in the volume of other manufactured and miscellaneous goods, other basic chemicals and iron ores and concentrates. Decreases in the domestic shipments of some commodities also contributed to soften the effects of gains in the international tonnage. The port, Canada's second largest container handling port, handled 1.1 million TEUs, up 2.1%, in 2006.

Total traffic in 2006 at the Port of Saint John, New Brunswick, dropped 13.7% to 23.6Mt. Declines in international inbound shipments of crude petroleum (down 2.4Mt), fuel oils (down 0.5Mt) and other basic chemicals (down 0.4Mt), coupled with drops in exports of gasoline and aviation turbine fuel (down 0.9Mt) and other refined petroleum and coal products (down 0.2Mt) heavily influenced the downward movement in port tonnage. Despite these drops, gains were registered in shipments of wood pulp as a result of the return to production of a forest products mill. In addition, potash and fuel oils exports increased at the port.

Traffic at the Port of Sept-Îles (including Pointe-Noire) increased to 23.3Mt, representing a 5.0% increase over 2005. Exports of iron ores and concentrates, which represented the bulk of the port's activities, rose 6.3% to 18.3Mt. The port also registered a 28.3% rise in alumina imports to 1.1Mt in 2006.

Total tonnage handled at the Port of Québec (including Lévis) increased 1.4% to 23.1Mt in 2006 due mainly to higher domestic shipments. Higher transshipments⁶ of wheat and sugar along with domestic movements of other metallic ores and concentrates and salt contributed to the rise in activity at the port. Reduced inbound international tonnage of crude petroleum (down 1.3Mt) considerably offset the gains in domestic shipments.

The Port of Halifax experienced a decrease (0.3Mt) in overall cargo to reach 13.7Mt in 2006. The drop in tonnage was primarily due to declines in international imports of crude petroleum (down 0.4Mt), fuel oils (down 0.2Mt), gasoline and aviation turbine fuel and machinery (each down 0.1Mt). Also, contributing to the drop was a reduction in international exports of other non-metallic minerals (down 0.1Mt). These declines were partially offset by gains in overall domestic shipments of crude petroleum (up 0.4Mt) and other non-metallic minerals (up 0.1Mt).

For its part, Fraser River Port's traffic in 2006 decreased by 9.9% to just over 13.3Mt. The drop was largely attributed to declines in both outbound (down 1.3Mt) and inbound (down 0.6Mt) international cargo. There were gains in imports of iron and steel – primary or semi-finished (up 79.9%) and vehicles and parts and accessories (up 5.8%). The volume of containers handled, which had been growing steadily in recent years, fell sharply (down 77.4%) to 80,187 TEUs. Container activity at the port was heavily impacted by a consolidation in the shipping industry which resulted in the reallocation of container traffic in the Pacific Northwest region.

Cargo handled at the Port of Hamilton rose 3.7% to 12.6Mt in 2006. The increase was mainly due to higher tonnages of both inbound and outbound domestic cargo (each up 0.4Mt). Leading the growth in inbound domestic shipments were iron ores and concentrates and fuel oils. Despite a rise in the level of inbound coal shipments arriving from the United States Great Lakes region, total international tonnage handled at the port declined 5.0% to 6.3Mt.

Total cargo handled at the Port of Thunder Bay increased by 2.4% in 2006 to 8.3Mt, rebounding from the drop in 2005. Increased domestic shipments of wheat coupled with a rise in the international tonnage handled of other oil seeds and nuts and other agricultural products were the main contributors to the increase.

The port of Prince Rupert experienced its busiest year in 2006 since 2000, handling 7.6Mt of commodities, representing a 73.8% advance over 2005. Coal and grains⁷ proved to be the chief drivers. The opening of new coal mines in northeast British Columbia and strong Asian demand for thermal coal fuelled a 262.7% increase in coal volume to 2.3Mt in 2006.

6. The cargo that is unloaded at a port and reloaded onto another vessel. It is therefore handled twice by the same port, sometimes after a period of storage.

7. Grains include wheat, colza seeds (canola), barley, rye, oats and other cereal grains.

After handling 5.2Mt of cargo in 2005, activities at the Port of Windsor (Ontario) continued to trend upward in 2006 (up 7.1%) to reach 5.5Mt. It was a strong year for total outbound shipments of salt, which increased 41.7% in 2006 (up 0.6Mt). Also contributing to the growth in traffic at the port were increased imports of limestone and iron and steel – primary or semi-finished (each up 0.1Mt).

Cargo handled at North Arm Fraser River port continued to increase in 2006 (up 5.1%) to reach 5.4Mt. Both inbound and outbound traffic at the port, which handles only domestic cargo, contributed to the increase. All the commodities handled at the port experienced a rise except for wood chips and limestone.

Traffic at the port of Trois-Rivières reached 3.0Mt in 2006 from 2.5Mt in 2005, the highest total in more than a decade. The main contributing factor was a rise in international cargo which increased 9.8% from 2.0Mt in 2005. Gains were registered in international shipments of cement, other wood products (plywood, veneer) and other oil seeds and nuts and other agricultural products. Also contributing to the overall increase were gains in domestic shipments of salt, wheat and other non-ferrous metal – primary or semi-finished.

Cargo handled at the Port of Nanaimo, fell 1.4% in 2006. Gains in domestic cargo (up 12.7%) were insufficient to offset the decline in international shipments, which dropped 13.1%. The drop in international activity was led by a sharp decline in outbound shipments of logs and other wood in the rough (down 29.5%). The main driving force behind the rise in tonnage of domestic cargo was inbound wood chips, which increased 10.7% in 2006.

The port of Toronto's volume declined 10.0% to 1.8Mt in 2006. A substantial increase in the tonnage of salt handled at the port could not offset the declines experienced in the volumes of stone, sand, gravel and crushed stone and other refined petroleum and coal products. Also contributing to the decline in total freight in 2006 was the absence of coal, which was shipped domestically for the first time from Toronto since 1990 in 2005.

Total tonnage handled at the Port of Belledune dropped 22.1% to 1.7Mt in 2006, from 2.2Mt in 2005. International cargo, which represented almost 90% of the total cargo handled by the port was the main factor behind the decrease. Declines in international shipments of coal, the port's primary commodity, coupled with decreased tonnage of coal coke and petroleum coke, other metallic ores and concentrates and other basic chemicals heavily influenced the drop in the port's activity.

The amount of cargo handled at Port Alberni rose (0.3Mt) to reach 1.5Mt in 2006. The gains were achieved as a result of increased shipments of logs and other wood in the rough which accounted for almost 94% of the total tonnage handled by the port.

At the Port of St. John's, Newfoundland and Labrador, the total tonnage decreased for a second consecutive year. Total shipments dropped to 1.3Mt in 2006 due to a decrease in domestic activity. Lower inbound domestic tonnages of gasoline and aviation turbine fuel (down 57.6%) and fuel oils (down 50.7%) were the major contributors to the decline in shipments at the port.

The volume of cargo handled at Port Saguenay (Chicoutimi) inched up 45,000 metric tonnes to reach 0.3Mt. This rise represented an increase in activity after several years of decline. Higher domestic inbound tonnage of salt was principally responsible for the increase.

Data quality, concepts and methodology

Introduction

The statistics in this publication were collected under the authority of the *Statistics Act* (Revised Statutes of Canada, 1985, chapter S19). The statistics are derived from two surveys: the Coastwise Shipping Survey (Survey number 2751) and the Marine International Freight Origin Destination Survey (Survey number 2791).¹ The purpose, populations, data sources, and data quality for these surveys are discussed in the following sections.

Purpose of the surveys

These surveys collect data on:

- Coastwise or domestic marine transport - the carriage of cargo by ships between Canadian ports in Canadian waters; and,
- International marine transport – the carriage of cargo between Canadian ports and foreign ports in the United States or overseas.

The information collected in these surveys includes the description and quantities of commodities loaded and unloaded at Canadian ports and marine terminals by vessels calling at those facilities, and the origin and destination of those commodities. Data are aggregated for publication of commodity traffic by Canadian port and foreign country of origin or destination.

Statistics Canada uses these data as one input to Canada's System of National Accounts. The data are also used by Transport Canada, other federal departments, provincial ministries, transportation companies, consulting firms, universities and foreign governments. This information is used to analyse transportation activities, for marketing and economic studies, and to assess the industry's performance.

Survey populations

For each survey it is possible to define a target population as all the units (e.g., ships) for which data were intended to be collected and a survey population as all the units for which the survey actually provides data. The survey population may differ from the target population when it is not possible to identify or to survey all of the units within the target population.

The target populations of the Coastwise Shipping Survey and the Marine International Freight Origin Destination Survey are all ships that carry cargo between Canadian ports or between Canadian ports and foreign ports.

The Coastwise Shipping Survey population is somewhat different from the target population. It consists of ships engaged in domestic shipping at Canadian ports, with the exception of:

- i. cargo vessels less than 15 net register tons (NRT);
- ii. tugs or other vessels under 15 gross register tons (GRT);
- iii. Canadian naval ships;

1. For more information see Coastwise Shipping Survey: www.statcan.ca/english/sdds/2751.htm and International Freight Origin Destination Survey: www.statcan.ca/english/sdds/2791.htm.

- iv. fishing vessels;
- v. research vessels;
- vi. ballast movements for towboat and ferry operators on the West Coast ports;
- vii. cargo carried in trucks and rail cars on domestic vehicle ferries.

This limited survey field may have a significant impact on the statistics reported for some commodities, regions and ports such as the Pacific Coast, where a number of tugs that are under the GRT threshold are engaged in the towing log booms. The exclusion of ferry traffic will also affect the statistics for cargo transported to and from islands such as Newfoundland, Prince Edward Island and Vancouver Island. However, this cargo should be reflected in statistics collected for freight transported by the truck and rail modes.

The survey population for the Marine International Freight Origin Destination Survey includes vessels engaged in international shipping at Canadian ports with the exception of (i) fishing boats registered in Canada or abroad, (ii) maintenance and service ships such as icebreakers, (iii) research vessels and (iv) other non-commercial vessels such as hospital ships.

Data sources

Data for the Coastwise Shipping Survey are collected directly from the owners, operators, agents or officers of ships engaged in domestic shipping. The data are reported on one of two questionnaires, either the *S.1, Domestic Shipping Report* or the *S.4, Towboat and Ferry Operators Shipping Report*. The operators of cargo-carrying ships arriving and departing Canadian ports or marine terminals complete these reports for each such arrival and departure. The S.1 Report provides the following information: vessel name, country of registration, the vessel's gross and net registered tonnage, cargo description, tonnage and ports of loading and unloading. The S.4 Report is used only on the West Coast by operators of tugs, cargo barges and ferries for monthly reporting of coastal shipping. These operators do not report ballast movements. The S1 and S4 Reports are sent to Statistics Canada each month.

Information on international shipping is collected from the Advance Commercial Information (ACI) program & the A6 General Declaration and manifests required by the Canada Border Services Agency (CBSA) for each ship loading or unloading cargo in Canada that either originated in or is destined to a foreign country. Local CBSA employees send copies of these documents to Statistics Canada. In some cases, marine agents or port authorities send equivalent reports to Statistics Canada. The data provided by the ACI program & the Form A6 and its annexes provide information on: the vessel's name and country of registration, registered gross and net tonnage, and information such as the description of the cargo, tonnage containerizes information and ports where commodities will be loaded and unloaded. These variables constitute the database for statistics on international shipping.

Data quality

All statistical surveys are subject to errors. The total error of a survey is defined as the difference between the survey estimate and the actual value for the target population. Survey errors can be classified as "sampling" or "non-sampling" errors. The marine transport surveys are censuses and are therefore not subject to sampling errors.

There are four main types of non-sampling errors:

- i. Coverage errors (when the survey frame does not thoroughly cover the target population);
- ii. Response errors (when a respondent provides inaccurate information);
- iii. Non-response errors (when a respondent does not respond to all or part of the questionnaire) and,
- iv. Processing errors (errors made during data capture, coding, and editing).

The Coastwise Shipping Survey is thought to be more affected by coverage errors than the Marine International Freight Origin Destination Survey. The survey population is smaller than the target population due to the size threshold and the various ship types that are exempted (e.g., vehicle and rail ferries) and the practical difficulty of identifying the fleet of all ships that are active in the domestic transport of cargo. With respect to the Marine International Freight Origin Destination Survey, customs rules apply to all ships arriving from or departing for foreign ports. However, Statistics Canada has only limited tools for identifying missing shipping documents.

Both surveys have significant exposure to response error, particularly in terms of the reported commodities. The marine carrier of domestic and international cargo is not always able to provide descriptions that are sufficiently detailed to accurately code the commodity. Terms such as general cargo are often used in cases where the carrier is unsure of the exact contents of a container or when there are a number of commodities being transported in one shipment. As result, residual categories such as “Other manufactured and miscellaneous goods” and “Other chemical products and preparations” may be overestimated while the true commodity is understated. Respondents may also use incorrect conversion factors in estimating the weight of a shipment.

Non-response errors are expected to have more of an effect on the Coastwise Shipping Survey. Shipping reports are not submitted for all vessel traffic Canadian ports. It is known that there is a significant amount of under-reporting for the Pacific Coast and the Mackenzie River. While it is assumed that the reporting to the Canada Border Services Agency (CBSA) of international traffic is fairly comprehensive, there are occasions when reports are not forwarded to Statistics Canada, particularly for ports in the Canadian Arctic and other remote areas that do not have local customs offices.

Both surveys are subject to processing errors during data entry, including errors in transcribing and coding information and in converting cargo quantities from non-weight units (e.g., barrels or cubic metres to kilograms). Errors may also be introduced during editing and imputation procedures that are used to correct data that appear to be erroneously reported or partially reported. A number of techniques are used to detect and resolve these errors including micro and macro analysis of the data for congruency and consistency with information acquired from other sources (e.g., cargo statistics from port authorities and economic statistics from other Statistics Canada divisions).

Appendix I

Glossary

Terms related to reporting forms

Advance Commercial Information (ACI): The Canada Border Services Agency (CBSA) introduced the ACI program to replace, at the first port of call, A6/A6A paper reporting with electronic reporting of key variables for vessels arriving from any port outside Canada. These include such information as name and nationality of vessel, net and gross register tonnage, last port of call and cargo particulars such as tonnage unloaded and handling port. The program was implemented in two phases. Phase 1 was implemented in April 2004 and applied to cargo loaded at foreign ports, excluding the United States. Cargo loaded in the United States will be required to be reported using ACI beginning in July 2006.

A6 General declaration: This is an administrative document which is submitted along with supporting cargo reports to Canada Border Services Agency (CBSA). The document should be completed for every vessel arriving from outside Canada or departing for any port or place outside Canada with the exception of those required to report using ACI. The A6 General Declaration provides such information as name and nationality of vessel, net and gross register tonnage, next/last port of call, and cargo particulars such as tonnage loaded or unloaded, and handling port.

S.4 Towboat and ferry operators shipping report: This report is used principally by members of the British Columbia Council of Marine Carriers to report the domestic shipping activities of tug, barge, scow and ferry operators on the west coast. The report is filed on a monthly basis and excludes ballast movements.

S.1 Domestic shipping report: This report is completed by ships' officers or operators of vessels engaged in domestic shipping arriving at or departing from Canadian ports. It contains such information as: vessel name, net and gross register tonnage, commodity description and tonnage, ports of loading and unloading. This is the principal source of data for the production of domestic shipping statistics.

Terms related to cargo

Ballast movement (arrival or departure): An arrival at a port is considered ballast if there is no cargo unloaded from the vessel at that port. A departure from a port is considered ballast if there is no cargo loaded on the vessel at that port. Ferry (passenger and cars) movements also count as ballast movements since there is no loading/unloading of commercial cargo.

Commodity: Cargo loaded or unloaded is classified according to a structure based on Statistics Canada's Standard Classification of Transported Goods (SCTG).

Lightering: This term refers to the loading/unloading of cargo in a harbour rather than at a dock or wharf. Cargo tonnage is included with port totals.

In-transit cargo: Foreign cargoes handled at Canadian ports en route for or from a third country. Since tonnages are included in port totals, the statistics do not necessarily reflect import and export tonnages, but are rather focused on port activity.

Terms related to ports

Destination: The port of unloading of cargo is considered the port of destination. This is not necessarily the point of ultimate destination of cargo, which may be inland. Relative to the international shipping sector, this is the foreign port or country of unloading and not necessarily the ultimate country of destination.

Origin: The port of loading of cargo is considered the port of origin. This is not necessarily the point of actual origin of cargo, which may be inland. Relative to the international shipping sector, this is the foreign port or country of loading and not necessarily the actual point of origin.

Handling port: The Canadian port of loading/unloading of cargo. This does not necessarily coincide with the Customs Port, or the municipality of the same name.

Atlantic region: This region consists of Canadian ports on the Atlantic Ocean and Arctic Waters, and that portion of the Gulf of St. Lawrence which is east of the inland waters as defined in the Canadian Shipping Act.

Great Lakes region: This region consists of Canadian ports located along the St. Lawrence river west of the Ontario-Quebec border, and on the Great Lakes.

Pacific region: This region consists of Canadian ports located on the Pacific Coast and the Mackenzie River.

St. Lawrence River region: This region consists of Canadian ports located on the St. Lawrence river from the Ontario-Quebec border eastward, along the north shore to 63° west longitude and along the south shore to Cap des Rosiers.

Terms related to vessels

Gross register tonnage: The capacity in cubic feet of the spaces within the hull and of the enclosed spaces above the deck of a vessel, divided by 100. This is the figure as reported on the A6 General Declaration or the S1 and S4 reporting forms.

Net register tonnage: The gross register tonnage (as defined above) minus the capacity utilized by propelling machinery, fuel, and personnel accommodation.

In ballast: A vessel is considered arriving or departing "in ballast" if no cargo is loaded when leaving a Canadian port or no cargo is unloaded when arriving at a Canadian port.

LO LO: an acronym for "lift on, lift off". System of loading and discharging whereby cargo is lifted on and off a ship by the use of cranes.

RO RO: An acronym for "roll on, roll off". System of loading and discharging a ship whereby the cargo is driven on and off.
