# Service bulletin

# **Architectural Services**

# 2006

# **Highlights**

- Architectural services and landscape architectural services firms generated combined operating revenues of \$2.6 billion in 2006, an increase of 15% from the previous year.
- Of the aggregate operating revenues, businesses classified to the architectural services industry generated \$2.4 billion dollars, with the remainder coming from firms in the landscape architectural services industry.
- While the industry showed revenue gains across the country, revenue growth rates continued to be generally higher in Western Canada, particularly in Saskatchewan and Alberta.
- The industry also fared well in the central provinces where revenue growth rates exceeded 10%. This is notable in comparison with the modest growth rates in 2005 and the contraction in 2004.
- Operating revenues for firms in Ontario accounted for more than two-fifths of the total national figure. British Columbia was a distant second, with close to one-fifth of the revenues, followed by Quebec (17%) and Alberta (14%). The rest of the provinces and territories contributed to less than one-tenth of total industry revenues.
- The industry earned half of its revenues from the business sector compared with 40% from governments and public institutions. The remaining 10% of revenues came mostly from households and partly from foreign clients.
- In 2006, the total operating expenses grew by 17% to \$2.2 billion dollars, resulting in a profit margin of 15%.

**Note:** As of 2006, the Annual Survey of Architectural Services comprises two North American Industry Classification System industries; Architectural Services (54131) and Landscape Architectural Services (54132). Previously, the latter was included in the Annual Survey of Specialized Design Services.

# **Statistical tables**

### Table 1

Summary statistics for the architectural services and landscape architectural services industries, by province and territory, 2004 to 2006

	Operating revenue	Operating expenses	Salaries, wages and benefits	Operating profit margin	Statistical establishments
	mil	lions of dollars		percent	number
2006					
Newfoundland and Labrador	13.4	11.3	4.9	15.2	28

### Data sources, definitions and methodology

#### Description

This annual sample survey collects the financial and operating data needed to produce statistics on the architectural services and the architectural landscape services industries in Canada. The survey also collects detailed information on the characteristics of the businesses, such as type of revenue and type of client. These data are aggregated with information from other sources to produce official estimates of the national and provincial economic production of the architectural services and the architectural landscape services industries in Canada. The results from this survey provide data to businesses, governments, investors, and associations. These data allow these groups to monitor the growth of the industry, measure performance, allow comparison across similar businesses and to better understand this industry to react to trends and patterns.

#### **Target population**

The target population consists of all establishments classified to the architectural services industry (NAICS 541310) according to the North American Industry Classification System (NAICS) during the reference year. This industry comprises establishments primarily engaged in planning and designing the construction of residential, institutional, leisure, commercial and industrial buildings and other structures by applying knowledge of design, construction procedures, zoning regulations, building codes and building materials. As of reference year 2006, this survey also includes all establishments classified to the architectural landscape industry (NAICS 541320). This industry comprises establishments primarily engaged in planning, designing and administering the development of land areas for projects such as parks and other recreational areas, airports, highways, hospitals, schools, land subdivisions, and commercial, industrial and residential areas by applying knowledge of land characteristics, location of buildings and structures, use of land areas and design of landscape projects.

## Sampling

This is a sample survey with a cross-sectional design.

The frame is the list of establishments from which the portion eligible for sampling is determined and the sample is taken. The frame provides basic information about each firm including address, industry classification, and information from administrative data sources. The frame is maintained by Statistics Canada's Business Register and is updated using administrative data. The basic objective of the survey is to produce estimates for the whole industry - incorporated and unincorporated businesses. The data come from two different sources: a sample of all businesses with revenue above or equal to a certain threshold (note: the threshold varies between surveys and sometimes between industries and provinces in the same survey) for which either survey or administrative data may be used; and administrative data only for businesses with revenue below the specified threshold. It should be noted that only financial information is available from businesses below the threshold; e.g., revenue, and expenses such as depreciation and salaries, wages and benefits. Detailed characteristics are collected only for surveyed establishments.

Prior to the selection of a random sample, establishments are classified into homogeneous groups (i.e., groups with the same NAICS codes and same geography). Quality requirements are targeted, and then each group is divided into sub-groups called strata: take-all, must-take, and take-some.

The take-all stratum represents the largest firms in terms of performance (based on revenue) in an industry. The must-take stratum is comprised of units selected based on complex structural characteristics (multi-establishment, multi-legal, multi-NAICS, or multi-province enterprises). All take-all and must-take firms are selected to the sample. Units in the take-some strata are subject to simple random sampling.

The effective sample size for reference year 2006 was 681 collection entities.

#### Definitions

Estimates for the most recent year are preliminary. Preliminary data are subject to revision.

**Operating revenue** excludes investment income, capital gains, extraordinary gains and other non-recurring items.

**Operating expenses** exclude write-offs, capital losses, extraordinary losses, interest on borrowing, and other non-recurring items.

**Operating profit margin** is derived as follows: operating revenue minus operating expenses, expressed as a percentage of operating revenue. The derived figure excludes corporation income tax paid by incorporated businesses and individual income tax paid by unincorporated businesses. For unincorporated businesses, operating profit margin includes unpaid remuneration accruing to partners and proprietors, which is not recorded as salaries, wages and benefits. Therefore, the profit estimate will be higher in industries where unincorporated proprietorships and partnerships are significant contributors.

**Salaries, wages and benefits** include vacation pay and commissions for all employees for whom a T4 slip was completed. This category also includes the employer portion of employee benefits for items such as Canada/Québec Pension Plan or Employment Insurance premiums. Salaries and wages do not include working owners' dividends nor do they include the remuneration of owners of unincorporated businesses. Therefore, the relative level of salaries, wages and benefits will be lower in industries where unincorporated businesses are significant contributors.

An active **statistical establishment** is one production entity or the smallest grouping of production entities which produces as homogeneous a set of goods and/or services as possible; which does not cross provincial boundaries; and for which records provide data on the value of output together with the cost of principal intermediate inputs used and cost and quantity of labour resources used to produce the output.

## **Quality evaluation**

Prior to dissemination, combined survey results are analyzed for overall quality; in general, this includes a detailed review of individual responses (especially for the largest companies), an assessment of the general economic conditions portrayed by the data, historic trends, and comparisons with other data sources.

#### **Disclosure control**

Statistics Canada is prohibited by law from releasing any data which would divulge information obtained under the Statistics Act that relates to any identifiable person, business or organization without the prior knowledge or the consent in writing of that person, business or organization. Various confidentiality rules are applied to all data that are released or published to prevent the publication or disclosure of any information deemed confidential. If necessary, data are suppressed to prevent direct or residual disclosure of identifiable data.

#### Data accuracy

Of the units contributing to the estimate, the (weighted) response rate was 86.6%. CVs were calculated for each estimate and are available upon request.

#### Glossary

#### **Architectural Services**

Architectural services that are provided for specific building projects. These services are classified by the type of building project. Included in each detailed project type are all the services normally provided by professional architects, from preliminary advisory services, through the provision of designs and construction documents, and construction contract administration services during construction. Such services may be provided on a stand-alone basis or as a package of services under a single contract. Excludes non-architectural products related to building projects, provided on a stand-alone basis, for example, construction management services, engineering design services, and drafting services. Excludes design-build contracts, in which the respondent takes on the construction risk as well as the design risk (classified in F.7) but includes architectural services for a design-build project that are provided on a sub-contract basis.

#### **Residential building projects**

Single-family	Includes the design of single family homes in sub-division developments. Townhouses with a floor-to-ceiling wall between each unit are classified as single-family houses.
Multi-family	Includes the design of apartment blocks and excludes the design of nursing homes and similar residential health care building projects (classified in F.1.f).
Non-residential building projects	
Office buildings	Architectural services for all types of office buildings, including those for public and institutional clients. Includes office parks.
Retail and restaurant	Architectural services for stores, restaurants and similar buildings. Includes projects such as shopping centers, retail stores, restaurants, gas stations.

Hotels and convention centres	Architectural services for buildings providing temporary overnight accommodations, such as hotels, motels and resorts, and for convention centers.
Health care	Architectural services for buildings used in providing health care. Includes active care hospitals and clinics, nursing homes, respite care centers, hospices.
Entertainment, recreational, and cultural	Architectural services for entertainment, cultural, recreation and sport facility projects. Includes cinemas and theatres, museums, zoos and aquariums, health clubs, swimming pools, stadiums and arenas and community centers; monuments.
Educational	Architectural services for educational buildings. Includes daycare centres, elementary, secondary and post-secondary projects. Includes school and college instructional buildings, college dormitories, and other buildings on college campuses, except stadiums and arenas.
Industrial buildings	Architectural services for industrial buildings. Includes mine buildings, manufacturing plants and similar processing and assembly buildings. Excludes warehouses (classified in F.1.j).
Transportation and distribution facilities	Architectural services for transportation and distribution facilities projects. These buildings include those involved in the movement of goods and people and the storage of goods. Includes bus stations, train stations, airport terminals, warehouses, distribution centers, truck terminals.

#### **Historical restoration projects**

Architectural services that incorporate legal requirements to preserve or restore the historic character of a building.

#### Architectural advisory services

The provision of advice, studies and reports on architectural matters, except when the advice relates to a specific project. Advice, studies and reports performed in conjunction with a project are classified based on the project type (in F.1.a-1). Includes the provision of testimony before a court or administrative body, by a witness who, by virtue of experience, training, skill or knowledge of architecture, is recognized as being qualified to render an informed opinion on matters relating to that field or subject.

#### Landscape architectural services

Landscape architectural services are concerned with the design of the built landscape. Landscape architectural services include the provision of designs and construction documents; plans, studies and other advisory services related to specific projects; and construction contract administration services.

#### Urban planning services

Urban planning services develop plans for the use of land, in order to achieve a community's objectives for a built and natural environment that is aesthetically pleasing, efficient and functional. Urban plans express public policies related to land use and development, as expressed by municipalities or other levels of governments. They provide a framework within which the plans for actual projects can be developed. Excludes the design of site master plans for actual construction projects.

#### Project site master planning services

Services that provide plans for a construction site, showing the proposed location of buildings, roads, parking lots and other features. Excludes urban planning services.

#### Interior design services

Services of planning, designing, and administering projects in interior spaces to meet the physical and aesthetic needs of people. Interior designers work in areas such as hospitality design, health care design, institutional design, commercial and corporate design and residential design. This industry also includes interior decorating consultants engaged exclusively in providing aesthetic services associated with interior spaces, fittings and furniture.

#### **Engineering services**

The application of physical laws and principles in the design, development, and utilization of machines, materials, instruments, structures, processes, and systems. It involves provision of advice, preparation of feasibility studies, preparation of preliminary and final plans and designs, the provision of technical services during the construction or installation phase, the inspection and evaluation of engineering projects, and related services.

#### Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner. To this end, Statistics Canada has developed standards of service that its employees observe.

To obtain a copy of these service standards, please contact Statistics Canada toll-free at 1-800-263-1136. The service standards are also published on www.statcan.gc.ca under "About us" > "Providing services to Canadians."

#### Note of appreciation

Canada owes the success of its statistical system to a long standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.
