The System of National Accounts

In Canada, the National Accounts have been developed since the close of the Second World War in a series of publications relating to their constituent parts. These have now reached a stage of evolution where they can be termed a "System of National Accounts". For purposes of identification, all publications (containing tables of statistics, descriptions of conceptual frameworks and descriptions of sources and methods) which make up this System carry the term "System of National Accounts" as a general title.

The System of National Accounts in Canada consists of several parts. The annual and quarterly Income and Expenditure Accounts (included with Catalogue Nos. carrying the prefix 13) were, historically speaking, the first set of statistics to be referred to with the title "National Accounts" (National Accounts, Income and Expenditure). The Balance of International Payments data (Catalogue Nos. with prefix 67) are also part of the System of National Accounts and they, in fact, pre-date the Income and Expenditure Accounts.

Greatly expanded structural detail on industries and on goods and services is portrayed in the Input-Output Tables of the System (Catalogue Nos. with prefix 15). The Catalogue Nos. carrying the prefix 15 also provide measures of the contribution of each industry to total Gross Domestic Product at basic prices as well as Productivity Measures.

Both the Input-Output tables and the estimates of Gross Domestic Product by Industry use the establishment as the primary unit of industrial production. Measures of financial transactions are provided by the Financial Flow Accounts (Catalogue Nos. with prefix 13). Types of lenders and financial instruments are the primary detail in these statistics and the legal entity is the main unit of classification of transactors. Balance sheets of outstanding assets and liabilities are published annually.

The System of National Accounts provides an overall conceptually integrated framework in which the various parts can be considered as interrelated sub-systems. At present, direct comparisons amongst those parts which use the establishment as the basic unit and those which use the legal entity can be carried out only at highly aggregated levels of data. However, Statistics Canada is continuing research on enterprise company establishment relationships; it may eventually be feasible to reclassify the data which are on one basis (say the establishment basis) to correspond to the units employed on another (the company or the enterprise basis).

In its broad outline, the Canadian System of National Accounts bears a close relationship to the international standard as described in System of National Accounts, 1993, a joint publication of the Commission of the European Communities, International Monetary Fund, Organisation for Economic Co-operation and Development, United Nations and World Bank.

Foreword

About the figures

The series on international security transactions cover portfolio transactions in stocks, bonds and money market securities between non-residents and residents of Canada. The series include trade in outstanding issues, new issues, retirements, and change in interest payable and are further segmented by issuing sector and major geographic area. The principle guiding their construction is that a change of ownership occurs between residents of a foreign country and Canada. These series form an integral part of Canada's balance of payments. Certain types of security transactions, which are excluded from this publication, are classified to other balance of payments series as follows:

- security transactions representing direct investment capital by principal owners of an enterprise, e.g. parent companies subscribing to new stocks;
- foreign securities held as part of Canada's official international reserves or by Canadian banks for their own account;

Security transactions are recorded before charges for fees and commissions. The value used is the transaction price and the timing of a transaction's recording is generally the delivery or settlement date.

The quality of foreign portfolio investment data in Canadian stocks, bonds and money market paper is good. The flows are reported on a monthly survey sent to the major investment dealers, pension funds, and the largest debt issuing institutions such as the provinces and their enterprises. Historically, the response rate has been well over 90%. A considerable effort is made to identify the various sectors and institutions which issue securities to non-residents; the data may, at times, be revised when new transactors are identified or information becomes available through annual surveys. The coverage is validated against administrative data and the annual census survey of foreign holdings of Canadian portfolio investments.

The quality of estimates of Canadian investment in foreign stocks, bonds, and money market paper is not as good as it is difficult to identify all Canadian residents making portfolio investments abroad. A considerable effort is made to identify the various Canadian institutions which invest in foreign securities and survey them on a monthly basis however individuals in the personal sector using foreign investment firms are harder to identify thereby weakening the estimates. The quality of the data has improved significantly with a series of annual surveys on Canadian portfolio investment abroad that began at year-end 1997. The inaugural survey was carried out as part of an international effort to improve data on external portfolio investment. Fully 35 countries participated in the portfolio survey, co-ordinated by the International Monetary Fund.

For transactions in outstanding securities, the data are largely derived from a monthly survey of investment dealers and of other financial institutions such as mutual funds, pension funds and trust companies which regularly buy or sell securities directly through dealers or brokers outside Canada. The data for new issues and retirements are obtained from survey and non-survey sources such as prospectuses, summaries prepared by dealers and other institutions, press reports, etc.

For a fuller description of the sources and methods employed in the construction of these series, please refer to the free publication Canada's Balance of International Payments and International Investment Position - Concepts, Sources, Methods and Products (Catalogue no. 67-506-X).

Highlights

Foreign demand for Canadian securities was up strongly in September, as non-residents added \$13.6 billion to their portfolios, mainly equities. Canadian investors, in contrast, removed \$4.8 billion from their holdings of foreign securities in September.

Analysis – September 2009

Foreign demand for Canadian securities was up strongly in September, as non-residents added \$13.6 billion to their portfolios. This activity was largely comprised of significant acquisitions of Canadian stocks. Foreign investors also continued to rebalance their holdings of Canadian debt in favour of longer-term securities, mainly in the federal government sector.

Chart 1
Foreign portfolio investment in Canadian securities

billions of dollars

Canadian investors, in contrast, removed \$4.8 billion from their holdings of foreign securities in September, mainly bonds. This was the largest monthly divestment since December 2008.

Non-resident demand for Canadian corporate shares up strongly

Foreign investment in Canadian equities reached \$12.9 billion in September, the largest inflow since April 2004. Two-thirds of this activity was directed to new issues of Canadian shares. In September, outward direct investment activity picked up steam, resulting in Canadian firms issuing new shares to non-resident portfolio investors of acquired firms.

At the same time, foreign demand for Canadian shares on secondary markets generated a \$4.3 billion inflow, a level last seen in April 2007. Equities from the gold and banking sectors attracted sizeable foreign buying. In September, Canadian equity prices increased nearly 5% to a 52-week high.

Foreign investors continue to favour Canadian long-term debt instruments

Non-residents continued to adjust their portfolios of Canadian debt securities in September, acquiring \$2.6 billion of Canadian bonds and disposing of \$1.9 billion of Canadian money market instruments.

Note to readers

All values in this release are net transactions unless otherwise stated.

The data series on international security transactions cover portfolio transactions in stocks, bonds and money market instruments for both Canadian and foreign issues.

Stocks include common and preferred equities, as well as warrants.

Debt securities include bonds and money market instruments.

Bonds have an original term to maturity of more than one year.

Money market instruments have an original term to maturity of one year or less.

Government of Canada paper includes treasury bills and US-dollar Canada bills.

Non-residents added Canadian bonds issued by private corporations to their holdings in September, predominantly new bonds from the resource and financial sectors. Foreign acquisitions of federal government bonds slowed in September, despite the first issuance of a federal bond on foreign markets since March 2001. Since the beginning of the year, foreign holdings of federal government bonds have increased by one-third. However, non-residents reduced their holdings of federal government enterprise and provincial bonds, due to retirements.

Currency-wise, this activity resulted in foreign investors adding \$9.5 billion of US dollar-denominated Canadian bonds to their portfolios and shedding Canadian dollar-denominated bonds. In September, the Canadian dollar appreciated against its US counterpart, and nearly recouped the depreciation recorded over the past 12 months.

At the short-term end of the maturity spectrum, non-residents reduced their holdings of Canadian money market instruments for a third month. This activity was largely comprised of divestment in federal and provincial government paper.

Canadians sell foreign shares as major global stock markets post gains

Canadian investors sold \$1.2 billion of foreign shares in September, following three months of acquisitions, as equity prices in major North American and European stock markets posted gains. The divestment activity was focussed in non-US foreign stocks, largely European stocks. At the same time, investment activity in US stocks was sustained. In September, US stock prices continued their recent climb, rising 3.6%.

Divestment in foreign bonds accelerates

Canadians continued to dispose of foreign bonds in September, removing \$4.1 billion from their holdings. This was an extension of divestments that began in May, and amounted to the largest such activity since October 2008. Since the third quarter of 2007, at the outset of global credit concerns, Canadians have reduced their exposure to foreign long-term debt securities by a total divestment of \$29.7 billion.

September's divestment in bonds was focussed in US government as well as in non-US foreign securities. The former was driven by sales of two-year US Treasury bonds and the latter was largely explained by further retirements of maple bonds.

Canadians acquired \$520 million in foreign money market instruments in September, investing in US paper but disposing of non-US paper. Canadian investment in US paper was mostly in Treasury bills.

1. Inclusive of new issues, retirements, trade in outstanding and change in interest payable or receivable.

2. Transactions in foreign money market securities are available from 2002 onwards.

Note(s): Throughout tables 1 to 14 a minus sign indicates the purchase of securities from non-residents, that is an outflow of capital from Canada.

Table 2-1**Portfolio transactions with non-residents in Canadian bonds, by type of transaction and sector — Federal government**
