## The Re-evaluation Workplan (April 2009 to March 2010)

The purpose of this document is to notify registrants, pesticide regulatory officials and the Canadian public of Health Canada's Pest Management Regulatory Agency's (PMRA) workplan for 2009–2010 re-evaluation.

The PMRA's re-evaluation program examines older pesticides using current scientific standards to make sure they are still acceptable. The PMRA considers potential risks as well as value of pesticide products to ensure they meet modern standards established to protect human health and the environment.

The available information regarding each pesticide is carefully assessed and any needed risk-management measures to further protect human health and the environment are proposed in a public consultation document before a final decision is reached.

Table 1 presents the PMRA's workplan for 2009–2010. Each chemical listed will be addressed through one of the following published, and publicly available, documents:

- Re-evaluation Note; including (Preliminary) Risk Assessment
- Proposed Re-evaluation Decision
- Re-evaluation Decision

Note that the PMRA re-evaluation workplan may change in response to emerging issues that require priority action.
