Understanding the Tables

CYLINDERS

Number of engine cylinders or engine rotors; Rotary engine (**R**)

MODEL

symbol High output – vehicle equipped with an engine that provides more power than the standard engine of the same size

AWD

All-wheel drive – vehicle designed to operate with all wheels powered

4WD / 4X4

Four-wheel drive – vehicle designed to operate with either two wheels or four wheels powered
Flexible fuel vehicle – vehicle designed to operate on gasoline and ethanol blends of up to 85 percent ethanol

CAR CLASSES

Two-seater (**T**); Subcompact (**S**); Compact (**C**); Midsize (**M**); Full-size (**L**); Station wagon (**W**)

LIGHT TRUCK CLASSES

Pickup truck; Special purpose vehicle (sport utility vehicle); Minivan (**V**); Large van (**F**)

ENGINE SIZE

Total displacement of all cylinders (in litres)

FUEL
Diesel (**D**); Ethanol (E85 – 85 percent ethanol blended with gasoline) (**E**); Regular unleaded gasoline (**X**);
Premium unleaded gasoline (**Z**)

TRANSMISSION

Automatic (**A**); Electronic automatic (**E**); Manual (**M**); Automatic with a manual mode (**S**);
Continuously variable (**V**); Manual with automatic clutch (**X**); Number of gears (**4,5,6,7,8**);
Electronic overdrive (**E**); Other overdrive (+)

FUEL CONSUMPTION VALUES

Shown as city and highway ratings (in litres per 100 km and miles per imperial gallon), with estimated annual fuel cost and estimated annual fuel use based on 20 000 km driven with a mix of 55 percent city and 45 percent highway ratings

CO₂ EMISSIONS

Carbon dioxide emissions (in kilograms) (based on estimated annual fuel use and fuel type)

A MESSAGE FROM VEHICLE MANUFACTURERS

The 2010 *Fuel Consumption Guide* and the EnerGuide fuel consumption label included with all new light-duty vehicles are produced in cooperation with vehicle manufacturers, Natural Resources Canada (NRCan) and Transport Canada (TC).

Purchasing a new vehicle is a major decision involving many factors. The information in this Guide will assist you in comparing relative fuel consumption ratings among vehicles that meet your utility, performance and lifestyle needs. While the fuel consumption ratings of a vehicle are one purchase consideration, the way in which you operate and maintain your vehicle also affects the amount of fuel consumed.

To optimize fuel efficiency, your vehicle must be properly maintained and run on clean, high-quality fuels. To reduce the amount of fuel you use, always follow the recommendations for fuel formulation and for vehicle maintenance and operation provided in your owner's manual.

The auto industry was the first industry to sign a voluntary agreement with the Government of Canada to significantly reduce greenhouse gases (GHGs). The auto industry's commitment will result in the continued introduction of advanced vehicle technologies. Technology is only one part of the solution – we are also committed to informing our customers about the impact of vehicle maintenance and driving habits to significantly reduce fuel consumption.

Together we can reduce the amount of fuel used for personal transportation and the resulting GHGs.

Introduction

The 2010 *Fuel Consumption Guide* provides model-specific fuel consumption information about 2010 model year light-duty vehicles, including passenger cars, pickup trucks, minivans, large vans, special purpose vehicles (i.e. sport utility vehicles [SUVs]) and alternative fuel vehicles. The information can be used to compare the fuel consumption of different models and help you to select the most fuel-efficient vehicle that meets your everyday needs.

Reducing fuel consumption means saving money and, more importantly, helping the environment. The annual *Fuel Consumption Guide* is just one of several decision-making tools produced by the ecoENERGY for Personal Vehicles program at NRCan. This program provides Canadian motorists with helpful tips on buying, driving and maintaining their vehicles to reduce fuel consumption and GHG emissions that contribute to climate change.

For more information on this and other ecoACTION initiatives, visit the Web site at ecoaction.gc.ca.

Fuel use is an ongoing expense and should be considered when purchasing or leasing a vehicle. Choosing the most fuel-efficient and appropriate size of vehicle, driving in a fuel-efficient manner, using your vehicle only when needed and following the manufacturer's operation and maintenance recommendations for your vehicle can save you fuel and money.

To learn more about buying, driving and maintaining your vehicle in ways that benefit the environment and the economy, visit the Web site at vehicles.nrcan.gc.ca.

Vehicle use has a significant impact on the environment and our health. GHGs, particularly carbon dioxide (CO₂), are produced when fuel is burned in your vehicle's engine. For every litre of gasoline used, about 2.3 kilograms (kg) of CO₂ are generated. Although not directly harmful to our health, CO₂ emissions contribute to climate change.

NOTE: The CO₂ calculation value has changed for 2010. The previous value of 2.4 kg/L is now 2.3 kg/L of gasoline, in line with Environment Canada's report, *Canada's Greenhouse Gas Inventory*.

To find out the fuel consumption ratings and estimated annual fuel costs of new and pre-owned vehicles before you buy or lease, for 1995–2010 vehicles, visit the Web site at vehicles.nrcan.gc.ca.

To request additional copies of the Guide, call 1-800-387-2000 (toll-free).

The Office of Energy Efficiency

Leading Canadians to Energy Efficiency at Home, at Work and on the Road

The Office of Energy Efficiency (OEE), Canada's centre of excellence for energy conservation, energy efficiency and alternative fuels information, is playing a dynamic leadership role in helping Canadians save millions of dollars in energy costs while contributing to a healthier environment.

One of the OEE's key tasks is managing the Government of Canada's new ecoENERGY Efficiency Initiative, with its programs to reduce energy use in buildings and houses, industry, retrofits, personal vehicles and fleets. Homeowners and owners of small and medium-sized organizations can also apply for ecoENERGY Retrofit grants and financial incentives. In addition, the OEE promotes other energy-efficient transportation choices.

The OEE provides practical energy conservation advice to consumers, school boards, businesses and institutions, and has links to hundreds of related sites around the world. With the assistance of the National Advisory Council on Energy Efficiency, the OEE is also charged with identifying opportunities for new and heightened energy efficiency measures. As well, it keeps Canadians abreast of developments in technology that can conserve fossil fuels or support the transition to less carbon-intensive energy sources, including renewable energy.

Informing key decision-makers in government, industry and the environmental and international communities about Canada's energy conservation and energy efficiency efforts and successes is a major focus of the OEE. Toward this end, the OEE publishes many comprehensive reports (available online).

The OEE is aggressively pursuing its vision of "Leading Canadians to Energy Efficiency at Home, at Work and on the Road" in ways that benefit both the environment and the economy. For further information, browse our Web site or contact us at

oee.nrcan.gc.ca

About fuel consumption ratings

The fuel consumption information appearing in the annual *Fuel Consumption Guide* is collected in conjunction with TC's Fuel Consumption Program (FCP).

The FCP monitors the fuel consumption of new vehicles in Canada by collecting detailed data from manufacturers and importers and by testing selected new vehicle models. The Program encourages improvements in the fuel efficiency of light-duty vehicles by setting annual Company Average Fuel Consumption (CAFC) goals for the automotive manufacturers.

For more information on this program, visit the Web site at www.tc.gc.ca/fcp.

Vehicle manufacturers use standardized testing and analytical procedures, approved by TC, to generate the vehicle fuel consumption data published in this Guide. TC compiles the data received from the vehicle manufacturers, and NRCAN uses this data and other information to publish the annual *Fuel Consumption Guide*.

Fuel consumption ratings based on manufacturer submitted data are only available for light-duty vehicles with a gross vehicle weight rating (GVWR) of less than 3855 kg (8500 pounds [lb.]) or a curb weight of less than 2722 kg (6000 lb.):

- Gross vehicle weight is the estimated total weight of a road vehicle that is loaded to capacity, including the weight of the vehicle itself plus fuel, passengers, cargo and other miscellaneous items.
- Curb weight is the estimated weight of a road vehicle in operational status with all standard equipment, the weight of fuel at nominal tank capacity and the weight of some optional equipment.

Vehicles that exceed the light-duty GVWR of 3855 kg (8500 lb.) or curb weight limit of 2722 kg (6000 lb.) are not listed in the Guide.

In some cases, vehicle information was unavailable before publication and some new vehicle models may not appear in the printed *Fuel Consumption Guide*. To obtain the latest updated fuel consumption ratings for light-duty vehicles, visit the Web site at vehicles.nrcan.gc.ca or consult your vehicle manufacturer or dealer for more information.

Testing procedures for vehicle fuel consumption

It would be difficult to drive every model of new vehicle on the road to measure fuel consumption. It would also be almost impossible to consistently duplicate on-road testing results as there are so many variables impacting the vehicle. Instead, a carefully controlled laboratory testing method, called the Federal Test Procedure (FTP), is followed to ensure that all vehicles are tested under identical conditions and that the results are consistent and repeatable.

The FTP is a standardized laboratory test method used in Canada that includes the use of standardized fuels, laboratories and testing equipment, test cycles and calculations. Selected prototypes of new vehicles are “run in” for about 6000 km before testing.

A vehicle being tested is mounted on a two-wheel laboratory chassis dynamometer programmed to take into account the aerodynamic efficiency, weight and rolling resistance of the vehicle. A trained driver then runs it through simulated city and highway driving cycles.

All vehicles, including those with four-wheel (4X4) or all-wheel drive (AWD), are tested in two-wheel drive mode. However, tests are adjusted to reflect the increased weight and engine load using 4X4 and AWD systems.

The FTP is composed of two tests – the city test and the highway test.

Simulated city course

The city test simulates a 12 km, stop-and-go trip with an average speed of 32 km/h and a top speed of 91 km/h. The test runs for 23 minutes and includes 18 stops. About four minutes of test time are spent idling, to represent waiting at traffic lights. The test begins from a cold engine start, which is similar to starting a vehicle after it has been parked overnight during the summer. When the test is completed, the test cycle starts again with a hot engine start, and the first eight minutes of the test are repeated. This simulates restarting a vehicle after it has been warmed up, driven and then stopped for a short time.

Simulated highway course

The highway test simulates a 16 km trip with an average speed of 77 km/h and a top speed of 97 km/h. The test runs for 13 minutes and does not include any stops. However, the speed varies to simulate different kinds of highway and rural roads. The test begins from a hot engine start.

Fuel consumption values from these test cycles are calculated from the emissions generated. The fuel consumption ratings, shown in the Guide, are generated based on fuel consumption values from the laboratory testing and averaged based on Canadian production volumes. They are then adjusted, using Canadian factors, to reflect real-world driving conditions.

For more information on vehicle fuel consumption testing, visit TC's FCP Web site at www.tc.gc.ca/fcp.

Your fuel consumption may differ from that in the Guide

The Guide provides a reliable comparison of the fuel consumption of different vehicles. The published ratings are for typically equipped vehicles and are adjusted to reflect average real-world driving conditions in Canada. However, no test can simulate all possible combinations of traffic conditions, climate, driving behaviours and vehicle maintenance, and as such, the fuel consumption of your vehicle may differ from that in the Guide.

The ratings that appear on the EnerGuide Label for Vehicles and in the 2010 *Fuel Consumption Guide* show the fuel consumption that may be achieved with a properly maintained vehicle driven with fuel efficiency in mind.

For more information on vehicle fuel consumption and related topics, including tips to get the most fuel savings out of your new vehicle, visit the Web site at vehicles.nrcan.gc.ca.

The fuel consumption you achieve with your vehicle may differ from published ratings, depending on how, where and when you drive and the optional equipment installed. Many factors can affect the fuel consumption of your vehicle, including: your driving style and behaviour, vehicle acceleration, braking and driving speed, overall age and operating condition of your vehicle, temperature, weather, traffic, road conditions, and drive systems and powered accessories (e.g. air conditioning) installed on your vehicle.

For more information on factors that can affect your vehicle's fuel consumption, visit the Web site at vehicles.nrcan.gc.ca.

Vehicle classes

In the Guide, cars are divided into six classes – four of which are based on an interior volume (int. vol.) index that combines passenger and trunk or cargo space, and two of which are based on car line (two-seaters and station wagons). Light trucks are divided into four classes – pickup trucks, special purpose vehicles (i.e. sport utility vehicles [SUVs]), minivans and large vans.

TWO-SEATER CAR (T)

STATION WAGON (W)

SUBCOMPACT CAR (S)

int. vol. less than 2830 L (100 cu. ft.)

PICKUP TRUCK

COMPACT CAR (C)

int. vol. 2830–3115 L (100–110 cu. ft.)

SPECIAL PURPOSE VEHICLE (SUV)

MID-SIZE CAR (M)

int. vol. 3115–3400 L (110–120 cu. ft.)

MINIVAN (V)

FULL-SIZE CAR (L)

int. vol. greater than 3400 L (120 cu. ft.)

LARGE VAN (F)

ecoENERGY for Vehicles Awards

NRCan recognizes the manufacturers of the most fuel-efficient new light-duty vehicles in their class sold in Canada each model year. For more information about current and previous winners, visit the Web site at vehicles.nrcan.gc.ca.

Winners for 2010

Cars	
Two-seater	smart fortwo
Subcompact	Toyota Yaris
Compact	Honda Civic Hybrid
Mid-size	Toyota Prius
Full-size	Hyundai Sonata
Station wagon	Audi A3 TDI Volkswagen Golf Wagon TDI Clean Diesel
Light Trucks	
Pickup truck	Ford Ranger Mazda B2300
Special purpose vehicle	Ford Escape Hybrid
Minivan	Mazda5
Large van	Chevrolet Express Cargo GMC Savana Cargo

See page E1 for fuel consumption information on this year's winners.

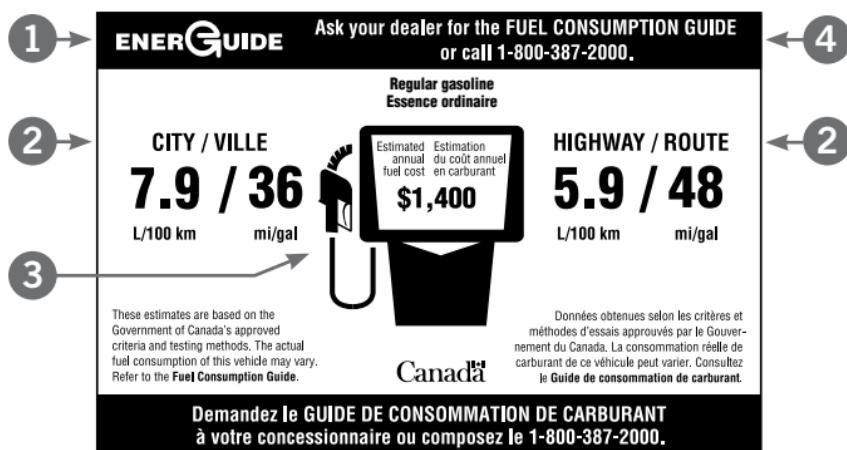

The EnerGuide Label for Vehicles

The EnerGuide Label is affixed to all new light-duty vehicles – including passenger cars, pickup trucks, special purpose vehicles and vans – for retail sale in Canada. The EnerGuide Label provides the model-specific fuel consumption for the vehicle to which it is affixed. Use the EnerGuide Label to compare new vehicle fuel consumption information and identify the most fuel-efficient new vehicle for your everyday needs.

The EnerGuide Label for Vehicles has a standardized design (as illustrated). It is affixed to the vehicle alone or as part of the vehicle options and price label. EnerGuide Labels should remain on new vehicles until they are sold. If a new vehicle has no label, ask the dealer for the manufacturer's fuel consumption ratings for the vehicle, consult this Guide or visit the Web site at vehicles.nrcan.gc.ca.

The fuel consumption ratings that appear on the EnerGuide Label are provided by vehicle manufacturers and are based on standardized testing procedures performed under controlled conditions.

Use the EnerGuide Label and *Fuel Consumption Guide* to compare the fuel consumption information and the estimated annual fuel cost of vehicles.

- 1 EnerGuide is the official Government of Canada mark for rating and labelling the energy consumption or energy efficiency of products, such as appliances, heating and cooling equipment, new vehicles and houses that have had an energy efficiency evaluation. For more information on EnerGuide, visit the Web site at oee.nrcan.gc.ca/energuide.
- 2 Compare the city and highway fuel consumption ratings of different vehicles to find out which vehicles consume the least amount of fuel.
- 3 Use the estimated annual fuel cost based on fuel type to assess potential fuel costs and savings when comparing vehicles.
- 4 If your new vehicle dealer is out of stock, use the contact information on the label to order your free copy of the 2010 *Fuel Consumption Guide*.

Comparing vehicles

Use the tables in this Guide to compare the estimated annual fuel consumption and costs for different vehicles. The vehicle with the best fuel consumption ratings and lowest estimated annual fuel use will save you fuel and money year after year – even more if fuel prices rise. Remember, the lower the L/100 km ratings, the lower the fuel consumption. Conversely, the higher the mi./gal. ratings, the better the fuel use.

Conversion between litres per 100 kilometres and miles per gallon

To convert L/100 km into mi./gal. or mi./gal. into L/100 km, use the following formulas:

$$\text{L/100 km} = \frac{282.48}{\text{mi./gal.}} \quad \text{mi./gal.} = \frac{282.48}{\text{L/100 km}}$$

Note: 4.546 L = 1 imperial gallon

1 imperial gallon = 1.2 U.S. gallons

CAUTION ON USING U.S. FUEL ECONOMY DATA FOR COMPARISON PURPOSES

Fuel consumption ratings in Canada and fuel economy ratings in the United States will differ significantly.

Beginning with the model year 2008, the United States implemented additional testing cycles and procedures for their fuel economy ratings.

Furthermore, U.S. fuel economy ratings are listed in miles per U.S. gallon and are averaged based on U.S. sales and adjustment factors.

Calculating estimated annual fuel use

FUEL CONSUMPTION

Estimated annual fuel use and fuel cost are based on an annual driving distance of 20 000 km with a mix of **55 percent city driving and 45 percent highway driving.**

You can use the following formula to calculate your estimated annual fuel use and assess potential savings when comparing vehicles:

Annual fuel use (in litres) =

$$\frac{\text{annual distance travelled (km)} \times \text{fraction of city driving} \times \text{city fuel consumption rating (L/100 km)}}{100}$$

+

$$\frac{\text{annual distance travelled (km)} \times \text{fraction of highway driving} \times \text{highway fuel consumption rating (L/100 km)}}{100}$$

For example, if we use the sample EnerGuide Label ratings (page 9)

$$\frac{20\,000 \text{ km} \times 0.55 \times 7.9 \text{ L}}{100 \text{ km}} + \frac{20\,000 \text{ km} \times 0.45 \times 5.9 \text{ L}}{100 \text{ km}} = 1400 \text{ L}$$

The estimated annual fuel use is 1400 L.

REMEMBER: The lower the fuel consumption rating in L/100 km and the lower your estimated annual fuel use, the greater your fuel savings – year after year.

Calculating estimated annual fuel cost

FUEL COST

Estimated fuel costs for 2010 are based on forecast prices of \$1.00/L for regular gasoline, \$1.10/L for premium gasoline and \$1.10/L for diesel fuel.

Fuel prices for alternative fuels are not provided in the Guide due to differences in availability.

You can use the following formula to calculate your estimated annual fuel cost and assess potential savings when comparing vehicles:

$$\text{Annual fuel cost} = \text{annual fuel consumption} \times \text{fuel cost (\$/L)}$$

For example, if we use the sample EnerGuide Label ratings (page 9) and fuel cost per litre of regular gasoline (\$1.00/L)

$$1400 \text{ L} \times \$1.00/\text{L} = \$1,400$$

The estimated annual fuel cost is \$1,400.

REMEMBER: Higher fuel prices than the above forecasts will result in annual costs greater than those printed in the Guide and on the EnerGuide Label.

Calculating estimated annual carbon dioxide emissions

Whenever your vehicle is using fuel, it produces tailpipe emissions including GHGs. CO₂ is a primary GHG, and the amount of CO₂ your vehicle generates depends on the amount and type of fuel used. For every litre of gasoline used, about 2.3 kg of CO₂ are produced; for every litre of diesel fuel, about 2.7 kg of CO₂ are produced.

Vehicle technology also influences the level of CO₂ emissions from a vehicle. For example, a modern diesel vehicle is inherently more fuel-efficient than its gasoline equivalent. And for the same distance travelled, a modern diesel can reduce CO₂ emissions by about 20 percent compared with those from a similar gasoline vehicle, even though the per litre CO₂ emissions are higher. Hybrid gasoline-electric vehicles can also reduce CO₂ emissions through increased fuel efficiency and reduced fuel use.

Tailpipe CO₂ emissions are calculated by multiplying the vehicle's estimated annual fuel use by a conversion factor for the type of fuel used.

For example, if we use the estimated annual fuel consumption derived from the sample EnerGuide Label (page 9)

$$1400 \text{ L} \times 2.3 \text{ kg CO}_2/\text{L gasoline} = 3220 \text{ kg CO}_2$$

The estimated annual CO₂ emissions are 3220 kg of CO₂.

REMEMBER: The lower the CO₂ emissions, the lower the impact on the environment.

Renewable fuels and greenhouse gas emissions reduction

In addition to choosing the most fuel-efficient vehicle for your everyday needs, your fuel choice can further reduce your GHG emissions.

For example, ethanol and biodiesel are renewable fuels made from plant materials that absorb CO₂ while growing. Because of this, using ethanol or biodiesel in place of non-renewable fossil fuels reduces GHG emissions. The level of GHG emissions reduction provided by ethanol and biodiesel blended fuels depends on a number of factors, including the percentage of ethanol or biodiesel in the fuel blend.

All major vehicle manufacturers design their vehicles to run year-round on gasoline containing an ethanol blend of up to 10 percent (E10) without any engine modification. Check your owner's manual to confirm. E10 is available at service stations across Canada. Ethanol blends of up to 85 percent ethanol (E85) and 15 percent gasoline can be used in place of 100 percent gasoline in specially designed flexible-fuel vehicles (FFVs). While ethanol blends produce less CO₂ than gasoline, ethanol contains less energy than gasoline, so in higher-level blends such as E85, more fuel is needed to travel the same distance. Refer to the tables in this Guide for FFV model availability and fuel consumption information.

Biodiesel is another fuel made from renewable resources (plant or animal materials). New diesel-powered vehicles are designed to operate on diesel fuel containing up to 5 percent biodiesel (B5) year-round without any modification. Check your owner's manual to confirm. Compared with unblended diesel fuel, blends of diesel fuel with biodiesel can reduce CO₂ emissions.

Whether your fuel choice is gasoline, ethanol-blended gasoline, diesel, biodiesel-blended diesel, or other alternative fuels, consult your owner's manual for the manufacturer's recommended fuels for your vehicle.

For more information on these and other alternative fuels, visit alternativefuels.nrcan.gc.ca.

Saving fuel: Tips on driving and maintenance

Once you have chosen the most fuel-efficient vehicle for your everyday needs, you can achieve additional savings and reduce your vehicle's impact on the environment by following some tips.

Consult your owner's manual. It contains important information about how to drive and maintain your vehicle for optimum performance and efficiency.

Driving tips

- **Reduce your speed:** Decreasing your speed from 120 km/h to 100 km/h consumes 20 percent less fuel. Slow down for safer and cleaner driving.
- **Don't drive aggressively:** Hard acceleration, hard stops and aggressive driving increase fuel consumption by up to 39 percent.
- **Keep on rolling in traffic:** Smooth and steady movement is more fuel-efficient than frequent starts and stops. You can save a lot of fuel by anticipating traffic, keeping a constant speed and coasting to stops.
- **Don't idle unnecessarily:** If you are going to be stopped for more than 60 seconds – when parked – turn the engine off.
- **Lighten your load:** Roof and ski racks and heavy items in your trunk decrease your vehicle's aerodynamics and add weight, causing your vehicle to burn more fuel. Lighten your load by taking only what you need.
- **Cruise control:** Use cruise control on dry, flat, clear, wide-open highways to help maximize fuel efficiency by maintaining the speed limit.
- **Air conditioning:** This causes vehicles to burn more fuel. Set the air conditioning to the temperature necessary for your comfort. In the city, roll down your windows or open the vents to keep cool.
- **Make one long trip instead of several short trips:** Taking short trips (less than 5 km) burns more fuel, because the engine and drivetrain don't reach their most efficient operating temperatures.
- **Leave your vehicle at home:** Walk, bike, carpool or take public transit whenever possible.

Maintenance tips

- **Follow your vehicle's recommended maintenance schedule:** A poorly maintained vehicle may consume more fuel. It adversely affects performance, produces higher levels of emissions and often leads to expensive repairs and low resale value.
- **Check fluid levels at least once a month:** Check and change the engine oil, engine coolant, transmission fluid (automatic) and power-steering fluid according to the manufacturer's recommendations in your owner's manual.
- **Check your tires:** Measure the inflation level of your tires once a month, preferably when they are cold. A tire under-inflated by just 56 kilopascals (8 pounds per square inch) can lose 15 000 km from its lifespan and increase your vehicle's fuel consumption by 4 percent. To find your vehicle's recommended tire pressure, look for the vehicle information placard on the inside edge of the driver's door, on the doorjamb, in the glove box or on the fuel door, or check your owner's manual.

 **The cost of fuel**

The following chart shows a range of fuel costs based on various fuel prices and litres of fuel used.

Litres	Cost/L					
	90¢/L	\$1.10/L	\$1.30/L	\$1.50/L	\$1.70/L	\$1.90/L
700	\$630	\$770	\$910	\$1,050	\$1,190	\$1,330
800	\$720	\$880	\$1,040	\$1,200	\$1,360	\$1,520
900	\$810	\$990	\$1,170	\$1,350	\$1,530	\$1,710
1000	\$900	\$1,100	\$1,300	\$1,500	\$1,700	\$1,900
1100	\$990	\$1,210	\$1,430	\$1,650	\$1,870	\$2,090
1200	\$1,080	\$1,320	\$1,560	\$1,800	\$2,040	\$2,280
1300	\$1,170	\$1,430	\$1,690	\$1,950	\$2,210	\$2,470
1400	\$1,260	\$1,540	\$1,820	\$2,100	\$2,380	\$2,660
1500	\$1,350	\$1,650	\$1,950	\$2,250	\$2,550	\$2,850
1600	\$1,440	\$1,760	\$2,080	\$2,400	\$2,890	\$3,040
