Ordering Standards

This PDF catalogue is produced annually by the Canadian General Standards Board and contains all CGSB standards current on January 1, 2010.

Regulations, codes and other documents may reference standards by a specific date, which may not be the latest issue. Therefore, when ordering, please specify the edition you require. If the client does not specify a dated edition, the CGSB will provide the latest version.

Orders placed by fax or mail should always be confirmed by phone. Our Sales Agent will be happy to verify the details of your order.

Using the Catalogue

Organization of the Catalogue

The publications listed in this catalogue are organized in two sections:

- Standards Numerical Index (see p. 1);
- Government of Canada (GC) Forms (prepared by the CGSB) (see p. 30).

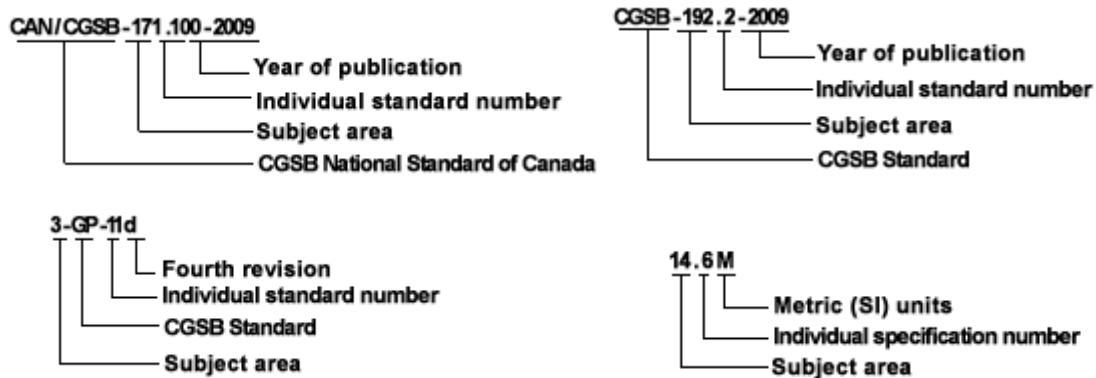

The Standards Numerical Index lists our standards numerically by product and service and includes:

- document title;
- date of publication of the latest issue and its price; and
- the latest amendment, if any, and its price.

Standard and Specification Identification

Several elements are included in the numerical designation of a standard or specification. For instance, the designation numbers:

CAN/CGSB-171.100-2009, CGSB-192.2-2009, 3-GP-11d and 14.6M contain the following elements:

Some standards and specifications published before January 1, 1992, show an “M” before the year of the latest edition. This indicates that the standard was written using metric (SI) units. Documents published after January 1, 1992, do not include the “M” because they all use metric units.

The letter “P” indicates a provisional standard. Standards are no longer published as provisional standards.

Other Important Terms Related to Standards

Adopted Standard: A standard approved as a National Standard of Canada or CGSB standard by a CGSB standards committee, with any modifications from the standard identified. The adopted standard may be republished or endorsed.

Republished Standard

The standard is published under CGSB cover bearing the designations of the CGSB and of the originating organization with permission of the copyright holder. The preface of an adopted standard contains any variations required for use in Canada.

An example of an adopted, republished standard is CAN/CGSB-4.2 No. 4.1-2008, which is also ISO 22198:2006.

Endorsed Standard

An endorsed standard is not republished as a CGSB document. Endorsed ISO standards are listed in the catalogue in the relevant subject areas.

Extended Standard: An existing standard determined through canvass of committee members and possibly other interested parties, to be technically valid, requiring no changes. Standards are no longer extended.

Reaffirmation of Standards: The declaration that an existing standard continues to be valid as is and that it still conforms to the requirements of a CGSB or National Standard of Canada, as applicable.

Time-dated Standard: A standard that has passed the systematic review date, usually five years after publication. The date of publication of the standard, or the date of the most recent technical amendment if the amendment includes a full review of the standard, is the latest date of the standard. This date is used to calculate the period for systematic review.

Conformity Assessment Services

The notation "CPL" following the standard title indicates that a CGSB Certification Program exists for this standard.

The notation "QPL" following the standard title indicates that a CGSB Qualification Program exists for this standard.

Lists of qualified or certified products and their suppliers are available on our Web site at www.ongc-cgsb.gc.ca.
