Housing Starts and MLS® Sales Continue to Advance

The housing market in the Halifax Regional Municipality (HRM) continued to advance in April. Practically all segments of the market experienced increased activity compared to a year ago. Both single-

detached and multiple starts increased, as did MLS® sales and average sale price.

Overall, starts increased substantially from 84 starts a year ago to 223 starts last month, largely due to the start of 98 condominium units. Single starts increased over 21 per cent as 80 starts broke ground in April compared to 66 a year ago. There were 41 semi-detached and row unit starts last month compared to 18 a year ago.

Low mortgage rates and strong employment continue to support new home construction activity. On a year-to-date basis, overall starts have increased over 90 per cent in the January to April time frame with 689 starts compared to 358 a year ago. After four months of the year there have been 296 single-detached starts compared to 170 a year ago, representing an increase of 74 per cent. In the condominium market, there have been 98 starts year-to-date compared to seven last year, while in the rental market 196 units have broken ground year-to-date compared to 90 a year ago.

There were 102 new, single-detached homes absorbed in April compared to 73 a year ago, an increase of 40 per cent. The average price of an absorbed single-detached home decreased from \$324,915 in April of 2009 to \$305,330 last month, representing a decline of six per cent.

In the existing homes market, there were 680 sales last month compared to 522 in April of 2009, representing an increase of over 30 per cent. All

submarkets, with the exception of Sackville, which posted a 1.9 per cent decline in sales, recorded strong sales growth in April. Despite an increase in sales in HRM, average prices remained relatively flat in April, \$244,851, compared to \$243,465 a year ago.

On a year-to-date-basis, MLS® sales in HRM remain 29 per cent higher than at this point in time last year

with 1,932 sales through four months compared to 1,500 in 2009. Each submarket, with the exception of Sackville, has recorded an increase in sales on a year-to-date basis. The largest increase was recorded in the Fall River-Beaverbank submarket where sales increased from 97 a year ago to 146 in 2010. Both Halifax City and Dartmouth City have recorded 506 sales through the end of April with increases of 38 and 35 per cent, respectively.

The average sale price of an existing home in HRM has increased 5.5 per cent after four months of the year to \$247,053. The average sale price increased ten per cent in Sackville to \$193,199 and 11 per cent in Halifax County Southwest to \$234,160. The average sale price in Dartmouth City and Halifax City grew more modestly at 2.8 and 2.4 per cent.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
