Halifax CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: June 2010

Residential Construction Increased in May

The housing market in the Halifax Regional Municipality (HRM) continued to exhibit strength in the month of May as total housing starts, new home prices and re-sale prices all posted increases.

There were 303 total housing starts in the HRM last month, a significant increase over the 126 starts recorded in May of 2009. The increase in total housing starts was due in large part to an increased level of apartment construction as there were 187 apartment starts in May compared to just 34 in May of last year. Single starts were up over 19 per cent last month to 80 starts.

Source: CMHC

On a year-to-date basis, there have been 992 total starts in the HRM through the first five months of the year compared to 484 starts a year ago as most structure types have recorded strong year-to-date growth. Single starts have increased from 237 in 2009 to 376 this year, an increase of 59 per cent. In the condominium market, there were 98 starts year-to-date compared to seven a year ago. The largest year-over-year increase was recorded in apartment starts where after two years of reduced activity, 379 units have broken ground year-to-date compared to 124 a year ago.

The year-to-date average price of the 368 new single-detached home sales this year is \$343,623, which is six per cent higher than the average new single-detached home price (of the 422 sales) last year of \$323,700. The increase in average price is attributed to a decline in the number of new home sales in below average priced submarkets (including Dartmouth City and Halifax County East) and more stable new home sales in above average priced submarkets

(including Halifax City, Bedford-Hammonds Plains and Halifax County Southwest).

There were 652 existing home sales in the month of May in the HRM, a decrease of 4.1 per cent from the 680 sales recorded in May of 2009. Sales declined the most in Halifax County Southwest, falling from 61 in May of 2009 to 45 last month. The

submarkets of Fall River-Beaverbank and Sackville recorded the largest increases in existing home sales last month of 20 and 13 per cent, respectively. Sales in Halifax City remained relatively constant in May as the city recorded 172 sales compared to 175 a year ago. Sales in Dartmouth City exhibited a similar trend as 188 sales were recorded last month compared to 184 in May of 2009.

The average sale price in May was \$262,894, which is an increase of 7.5 per cent over last May's average sale price of \$244,642. The average sale price increased the most in Halifax County Southwest (26.3 per cent), while the submarkets of Fall River-Beaverbank and Halifax County East also recorded large increases of 16.5 and 15.8 per cent, respectively.

On a year-to-date basis, existing home sales in the HRM are up 18.7 per cent over last year as each submarket with the exception of Sackville posted increases in sales. There have been 2,588 sales through five months of the year compared to 2,180 in 2009.

Figure 3

Source: Nova Scotia Association of REALTORS®

MLS® is a registered trademark of the Canadian Real Estate Association

The Fall River-Beaverbank submarket has recorded the largest increase in sales, 42.6 per cent, while the Halifax City and Dartmouth City submarkets posted year-to-date increases of 25.6 and 23.8 per cent, respectively.

The year-to-date average sale price increased to \$251,969 from \$237,428 last year as each submarket has recorded a year-to-date increase in price. Lower inventory levels, evidenced by a reduction in active listings in all submarkets, have been exerting upward pressure on average prices for most of the year. The largest increase in price through five months of the year was recorded in Halifax County Southwest where prices were up 15 per cent to \$240,112. Bedford-Hammonds Plains recorded the highest year-to-date average sale price of \$324,199, an increase of 7.7 per cent over last year. Average price growth in Halifax City and Dartmouth City was more modest at 2.9 and 0.9 per cent, respectively.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
