

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Fall 2009

*Only centres with a population of 10,000 + are included in the survey. Detailed reports are available for CMAs.

Highlights

- Ontario vacancy rates increase rising to 3.5 per cent in October 2009, up from 2.7 per cent last year.
- Vacancy rates rose for all bedroom types, particularly for bachelor suites.
- Softest rental markets in recent years saw little upward pressure on vacancy rates.
- Fixed sample 2-bed apartment rents increased in line with provincial rent review guideline amount.
- Notable factors weighing on rental demand include: improved home ownership affordability, weaker youth labour markets, declining international migration and increasing supply pressures.

Ontario Rental Vacancy Rates Moved Higher in 2009

For the first time since 2004, Ontario rental apartment vacancy rates edged higher. Ontario vacancy rates rose to 3.5 per cent, up from 2.7 per cent in the fall of 2008. While vacancy rates rose across all bedroom types, the increase was more pronounced for bachelor apartment units.

A synchronized increase in vacancy rates was registered across the province thanks to moderating economic activity. Vacancy rates moved much higher in Ontario's more expensive real estate ownership markets such as Toronto, Hamilton and Kitchener. A global economic downturn dampened commodity prices and economic activity pushing vacancy rates higher in Northern Ontario. Meanwhile a moderating US economy and high Canadian dollar in recent years have weighed on Ontario's industrial heartland, pushing rental vacancies at all-time highs However, Windsor, Oshawa and St. Catharines-Niagara rental markets have shown signs of stability in the fall of 2009.

Fixed sample apartment rents for 2-bedroom units rose by two per cent in October 2009. Above-average Ontario vacancy rates kept the growth in 2-bedroom apartment fixed sample rents in line with the *Province Rent Review Guideline* amount.

While general economic conditions highlighted above influence rental markets, the balance between rental demand and supply determines the level of vacancy rates. A number

of factors have decreased rental demand and exerted upward pressure on provincial vacancy rates. Firstly, according to CMHC's Home Purchase and Renovation Survey, more first time buyers/existing renter households have been in the market planning a home purchase in 2009. This story was magnified by the policy response to the financial and credit market challenges since last fall which saw overnight interest rates move down in sync with declining housing prices. Lower ownership costs combined with rising apartment rents resulted in a relative improvement in homeownership affordability. Consequently, more renter households shifted from renting to owning a home - dampening demand for rental accommodation.

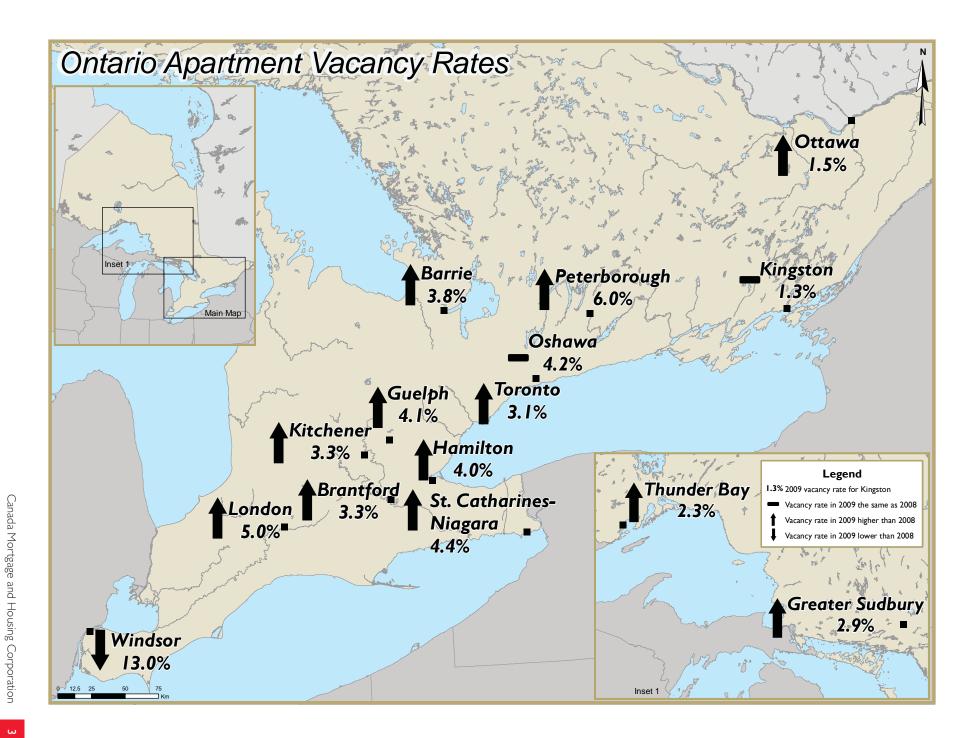

A second factor dampening rental demand were softer employment conditions across the province, particularly among the younger segment of the population. Young adults between the ages of 18 to 24 are more likely to rent than to own. Slowing job markets triggered less renter household formation. Rising unemployment rates and fewer job prospects encouraged many young adults to remain in the parental home. As more renter households aged 25-44 shifted into homeownership in 2009, fewer younger households were shifting into rental housing and taking occupancy of vacated units.

Competitive headwinds from the apartment ownership sector was another factor exerting downward pressure on conventional rental demand. On the ownership front, additional high density apartment

projects reached the completion stage since last fall. First-time buyers find condominium apartment dwellings an affordable entry point into the ownership market. With more renter households taking occupancy of their new apartments, some vacated their existing rental units – putting upward pressure on vacancies.

Another factor dampening demand for rental accommodation is Ontario's immigration story. The global economic downturn since last fall created a great degree of uncertainty, prompting less international travel. Immigration into Canada slowed – particularly so for Ontario which saw its share of immigration, relative to the west, continue to decline as it has in recent years. Immigrants typically lack the savings and work experience to qualify for homeownership. Approximately 75 per cent of immigrants opt for rental accommodation when first arriving in Canada.

On the supply side, additional purpose-built rental apartments and condominium rentals reached the completion stage in 2009, exerting upward pressure on vacancies in some selected markets. More purpose built rental apartment units helped boost the rental universe and created competitive headwinds for the existing stock. Meanwhile, some condominiums that reached the completion stage were bought by investors. Condominiums represent a source of rental accommodation for prospective renter households. Since last fall, condominiums have been a competing form of rental accommodation as evidenced by relatively low vacancy rates and lower rents.

The Percentage Change of Average Rent is a measure of the market movement, and is based on those structures that were common to the survey sample for both years.

The following letter codes are used to indicate the reliability of the estimates:

a – Excellent, b – Very good, c – Good, d – Fair (Use with Caution)

^{**} Data suppressed to protect confidentiality or data is not statistically reliable

⁺⁺ change in rent is not statistically significant. This means that the change in rent is not statistically different than zero (0) n/u: No units exist in universe for this category n/s: No units exist in the sample for this category n/a: Not applicable

TECHNICAL NOTE:

Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in 2008 vs. \$550 in 2009 represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the 2008 and 2009 Fall Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey** (RMS) every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data from sampled structures. Most RMS data contained in this publication refer to privately initiated apartment structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. In October 2006, CMHC has introduced a new measure for the change in rent that is calculated based on existing structures only. This estimate is based on structures that were common to the survey sample the previous year and the current year of the Rental Market Survey. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in the Rental Market Report – Canada Highlights, Provincial Highlights, and the local Rental Market Reports. The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market** (SRMS) in September and October to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS. CMHC has identified the following dwelling components to be included in SRMS:

- Rented single-detached houses.
- Rented double (semi-detached) houses (i.e.. Two units of approximate equal size and under one roof that are situated either side-by-side or front-to-back).
- Rented freehold row/town homes.
- Rented duplex apartments (i.e., one-above-other).
- Rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type).
- Rented condominiums (can be any dwelling type but are primarily apartments).
- One or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents.
- A Condominium Apartment Vacancy Survey of condominium apartment owners to collect vacancy information.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the owner, manager, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in September and October, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates for the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability. In 2009, rented condominium apartments were surveyed in the following CMAs: Vancouver, Victoria, Calgary, Edmonton, Regina, Saskatoon, Toronto, Ottawa, Montréal and Québec (NOTE: condo rent data was not collected for Regina and Saskatoon). Other secondary rental market units were surveyed in Abbotsford, Barrie, Calgary, Edmonton, Halifax, Montreal, Ottawa, Quebec, St. John's, Toronto, Regina, Saskatoon, Kelowna, Vancouver and Victoria.

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

All data presented in this publication is based on Statistics Canada's 2001 and 2006 Census area definitions.

Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

Rental Affordability Indicator

Canada Mortgage and Housing Corporation has developed a new rental affordability indicator to gauge how affordable a rental market is for those households which rent within that market. The level of income required for a household to rent a median priced two-bedroom apartment, using 30 per cent of its income, is calculated. The three-year moving average of median income of households in a centre is then divided by this required income. The resulting number is then multiplied by 100 to form the indicator. A value above 100 indicates that less than 30 per cent of the median income is required to rent a two-bedroom apartment, conversely, a value below 100 indicates that more than 30 per cent of the median income is required to rent the same unit. In general, as the indicator increases, the market becomes more affordable; as the indicator declines, the market becomes less affordable.

Median renter household income estimates used in the calculation of the rental affordability indicator are based on results of Statistics Canada's Survey of Labour and Income Dynamics. Results for this survey are available from 1994 to 2005. CMHC has developed forecasts of median renter household income for 2006, 2007, 2008 and 2009.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
