Date Released: First Quarter 2010

Apartment Construction Boosts Housing Starts in Charlottetown City

The Prince Edward Island economy continued to perform relatively well throughout 2009. This was especially evident in the housing sector. Strong in-migration to the province has provided a boost to many aspects of

the economy. The primary relocation area for this influx of people has been the capital region, and the housing sector is a key beneficiary of population growth. Some of the growth can be attributed to migrants returning from western Canada. Employment opportunities, however, were insufficient to meet the increase in the labour force as the province recorded the first slight decline in employment levels in over a decade.

Prince Edward Island was the only province in the country to record an increase in total housing starts for 2009, with a rise of 23 per cent. Although all provinces had declines in single detached unit construction, all other provinces also reported declines in multiple unit construction. New apartment activity continued to be the story on Prince Edward Island (primarily in the Charlottetown market) as the fourth quarter produced 167 new multiple unit starts compared to 68 units in the fourth quarter of 2008.

New home construction started the year slowly in the Charlottetown area, but made up for it in the final three quarters of 2009. Like the majority of the country, there was a decline in single detached starts, but not a significant drop. The total for the year was 268 new units compared to 280 in 2008. A very different story developed for multiple unit construction as there were 401 units started in 2009 compared to 146 in the previous year. The last time that multiple unit construction was higher than single-detached in the Charlottetown area was during the 1989-1990 period. Although the increased levels of in-migration may account for some of the boost in multiple unit construction, the favorable borrowing environment was also an important factor. A jump of this magnitude is not completely on account of improving demand as supply side factors are providing a boost as well.

In the fourth quarter, single starts in the Charlottetown area were up to 79 units from 69 during the same period the previous year. By far the greatest increase came from apartment starts which reached 121 units compared to 30 in the fourth quarter of 2008. Semi-detached construction was up

Figure 2

MLS® is a registered trademark of the Canadian Real Estate Association

to 16 units compared to six units and row housing units were also up, recording 18 units compared to eight in the last quarter of 2008. The only reported decline for the fourth quarter was in the category of rental construction other than apartments, where there were no new units started compared to 20 units in the final quarter of 2008. In total, the fourth quarter of 2009 recorded 234 starts in the Charlottetown area, up 76 percent from 133 the previous year.

The vast majority of increased construction in the fourth quarter took place in the Charlottetown City submarket, and again, multiple unit starts were mostly responsible. Apartment construction jumped to 95 units from zero the year before, while row housing reported a similar change to 18 units, up from no starts during the same time period a year ago. Single detached starts declined in this submarket to 17 from 25 the year before. In total there were 140 new units started in Charlottetown City compared to 47 in the last

quarter of 2008.

The other submarkets had better results in single-detached construction for the final quarter. The Town of Stratford remained stable with 12 new starts; Cornwall experienced an increase to 13 units compared to ten; the remainder of the CA reported 37 new single-detached starts compared to 22 units. Outside of Charlottetown City, only the Town of Stratford recorded any rental unit construction in the fourth quarter. There were 26 units started compared to 30 units the year before. For total starts, both the Town of Stratford and Cornwall were down compared to the fourth quarter of 2008. However, the strength of single-detached construction brought an increase to the remainder of the CA, recording a total of 41 units, up from 22 units.

New Home Prices Continue to Rise Significantly

New home prices rose sharply in the Charlottetown area in 2009. The trend toward larger, more expensive homes continues. The average new home

price increased from 2008 levels by 17 per cent to \$242,674. The Town of Cornwall saw the largest percentage increase in 2009 with a 30 per cent jump to \$266,406, followed by the Town of Stratford reporting a 26 per cent hike to \$288,274. Stratford remains the most expensive submarket in the CA.

On a quarterly basis, Charlottetown City had the greatest advance in average new home prices, increasing by 26 per cent to \$254,766. Stratford had the next highest increase (along with the overall highest average price) with a 23 per cent rise to \$277,839. The average new home price in Cornwall during the last quarter of 2009 was \$229,000, representing a 17 per cent increase. The least expensive submarket continued to be the remaining area in the CA with a relatively stable increase of five per cent to \$212,583. The new home price for the total Charlottetown CA during the final quarter of 2009 was \$244,329, an increase of 18 per cent.

Average MLS® Sales and Price Decline in the Quarter

The resale market for the Charlottetown area during the fourth quarter of 2009 followed a similar pattern to the third quarter. MLS® sales were down to 108 units compared to 131 units in the same period of 2008. The resale market peaked in 2007 as far as the number of sales is concerned, but the market has remained relatively stable near the ten year average.

The only submarket to show an increase in MLS® sales during the quarter was District 5 (Sherwood, Parkdale) while District 4 (Charlottetown City) remained at the same level. The largest

percentage decline in sales was reported in District 6 (Cornwall, North River, Winsloe). District 7 (Stratford) also had a decline in MLS® sales in the last quarter of the year, but not as significant as the Cornwall area. On an annual basis, MLS® sales were down nearly 11 per cent for the Charlottetown area as all four submarkets experienced declines for the year.

New listings declined in all four submarkets in the last quarter of 2009 as the market stabilized after setting record high listings in 2008. The same results apply to the annual new listings as the Charlottetown area recorded a decline of nearly 20 per cent. This drop in listings helped to support the average sale prices by keeping the market from being over supplied. The average time on the market in 2009 rose to 91 days from 76 the previous year.

The average MLS® sale price dropped in the fourth quarter with all submarkets being down from the same quarter in 2008 except District 4 (Charlottetown City). The overall average market price declined by approximately five per cent to \$174,405. The average MLS® sale price for District 4 turned out to be higher than District 7 (Stratford) which consistently had been the highest priced market recently. For the year, average prices rose approximately 1.1 per cent over 2008 for the Charlottetown area. On an annual basis, Stratford remained the highest priced market with an average of \$212,584 which also represented the largest yearly increase of slightly over four per cent.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada's 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
