Charlottetown CA

CANADA MORTGAGE AND HOUSING CORPORATION

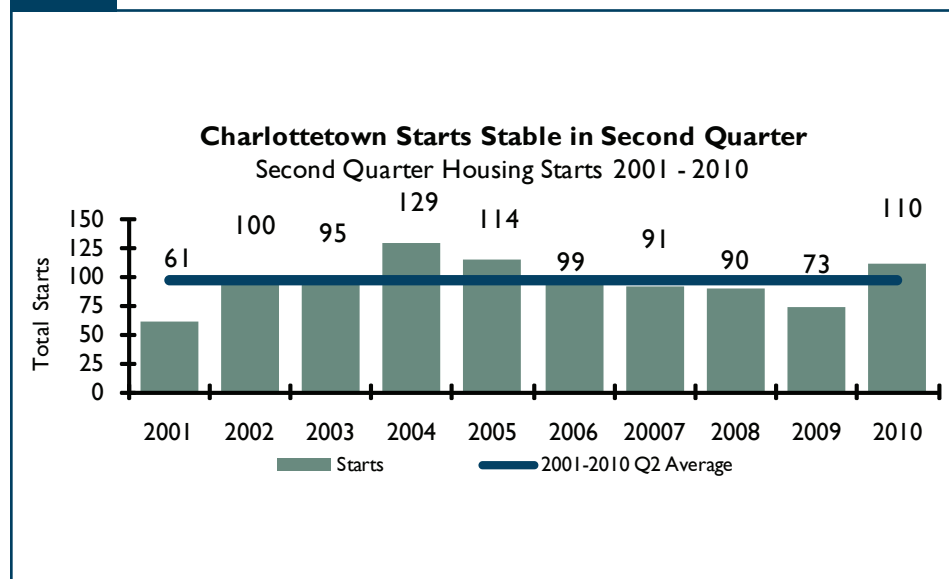

Date Released: Third Quarter 2010

Single-Detached Construction Increased in Charlottetown

For the first six months of 2010, the Charlottetown area experienced a slight increase in the level of new home construction. Unlike last year, however, the increase is being generated from a rise in single-

detached home construction as opposed to apartment and other multiple unit structures. The demand for all housing types in the Charlottetown area continues to be driven by low interest rates, strong employment growth, positive migration, low vacancy rates and relatively low home prices. Some of these factors are beginning to have less of an impact or have experienced shifts over the past year. For example,

the relatively low home prices have been rising steadily and are becoming more comparable with other locations. Also, interest rates have risen marginally, but continue to be near historically low levels. Although employment levels are on track to surpass the 2008 record, the pace of growth is slowing.

On a provincial level, total housing starts increased 13 per cent in the second quarter to 289 units compared to 256 units in 2009. Single starts recorded a strong increase of 35 per cent to 202 units last quarter from 150 units in the second quarter of last year. Multiple starts, which were very strong in 2009, saw a decline in the first half of the year. There was a total of 120 multiple starts compared to 150 in the first six months of 2009. On a year-to-date basis, total starts are ahead of 2009, with 332 units recorded this year compared to 300 units a year ago.

The Charlottetown area posted a slightly stronger second quarter with 200 units, up from 192 during the same period last year. Single starts were the only dwelling type that showed an increase as they were up 51 per cent to 110 units compared to 73 units in the second quarter of 2009. Apartment starts declined to 68 units in the second quarter, down from 86 units a year ago. Row units posted a small decrease from 17 to 16 units in the April to June period compared to last year. Semi-detached units also declined in the second quarter, dipping to six units from 16 units in 2009.

On a year-to-date basis, total housing starts in 2010 for the Charlottetown area advanced 4.7 per cent to 222 units, supported by single-detached starts. The only increase by unit type came from single starts, which rose

Figure 2

MLS® is a registered trademark of the Canadian Real Estate Association

by 38 units in the first half to 128 units. This increase was not localized to any one area of the CA as all of the submarkets recorded more single-detached home construction. Apartment starts recorded a drop of 21 units to 68 starts in the half.

In the second quarter of 2010, all of the submarkets in the Charlottetown CA recorded an increase in single-detached home construction with mixed results for total starts. Charlottetown City posted the largest increase in single starts during the second quarter, with 41 units this year, up from 23 units in 2009. Stratford and Cornwall each had an increase of six single starts while the remaining area in the CA had an increase of seven units. For semi-detached construction, Charlottetown City, Cornwall, and the remainder of the CA did not record any new units, while Stratford reported six units compared to none in the previous year. The same results were evident for row house construction; Stratford reported 16 new units during the second quarter this year compared to

eight in 2009, while the other three sub-markets did not have any row house construction during the quarter. Apartment starts were recorded in two markets – Charlottetown City and Stratford, but both were below the second quarter results of 2009. Charlottetown City saw 44 apartment units started compared to 50 units last year and Stratford was down to 24 compared to 36 last year. On a total starts basis, Charlottetown City and Cornwall were down 2.3 per cent and 16 per cent respectively. Stratford and the remainder of the CA both showed an increase over the second quarter of last year with growth of 11 and 31 per cent respectively.

New Home Prices Rise in Outlying Sub-Markets

The cost of a new single-detached home in the Charlottetown area rose again during the first half of 2010. Although the driving force behind these increases continued to be households choosing to build larger, more elaborate homes, the first half of the year saw Cornwall

and the remainder of the market area showing significant increases while Charlottetown City and Stratford recorded lower average new home prices. For the entire capital region the average new home price grew by five per cent in the first half of the year with the average price at \$238,700. In Charlottetown City proper, there was a slight decline of 0.5 per cent. The Stratford sub-market recorded a 12 per cent decline in the average new home price, indicating at least a temporary easing in what has been a rapid rise in prices over the past number of years. The most significant increase in the first half of the year was the 41 per cent increase in the average price of new homes in the Cornwall sub-market, which made it the most expensive in the overall Charlottetown area at \$295,500. The remainder of the CA, which is generally a more rural market, recorded an eight per cent increase during the first half of 2010.

MLS® Sales and Average Price Decline in the Second Quarter

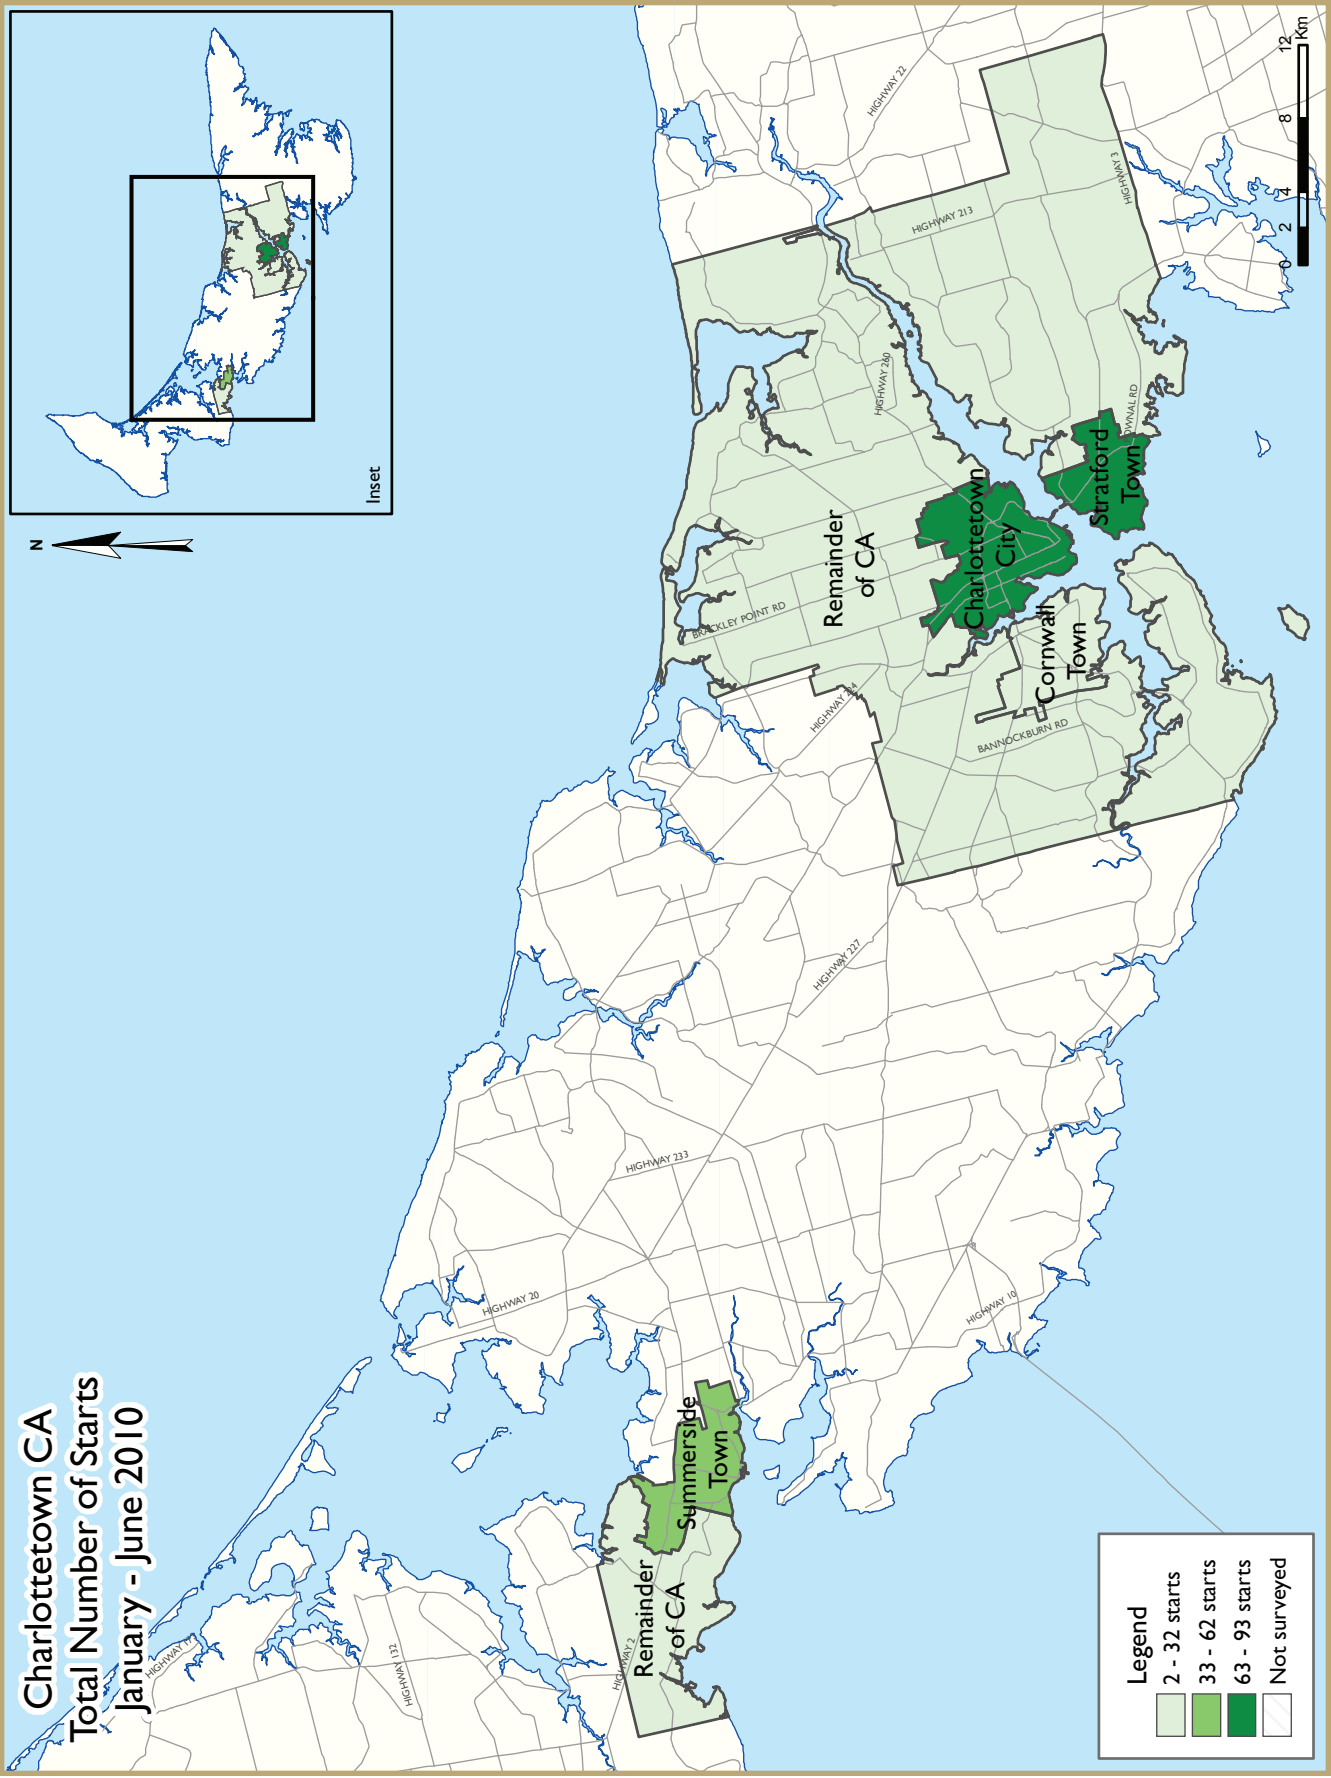

As mentioned above, easing of some of the factors which have been driving housing markets has led to a slight drop in the level of sales in the second quarter when compared to last year. The pace of existing home sales in the Charlottetown area declined by six per cent (or eight units) in the second quarter, compared to the same period in 2009.

New listings rose by close to six per cent in the April to June period of 2010. This moderate increase occurred in an environment of reduced sales and prices. The increase in listings came from Charlottetown City and especially the Cornwall area, which reported the largest rise in new listings. The Stratford area (District 7)

and Sherwood-Parkdale area (District 5) actually had fewer new listings than the second quarter of last year.

MLS® sales in the capital region saw mixed results in the second quarter at the submarket level. Districts 4 and 7 (Charlottetown City and Stratford areas) posted declines of 14 and 16 per cent respectively. These two submarkets represent a higher percentage of the sales and therefore led to the overall market decline in sales. MLS® sales were up in the Cornwall-North River area as well as the Sherwood-Parkdale area during the second quarter, but the increases amounted to only a few units.

In addition to the decrease in sales activity, the average MLS® sale price declined in three of the four sub-markets during the second quarter. District 7, Stratford, was the only district which experienced an increase in the average price of a home, reporting a seven per cent jump to \$205,500, and remains the most expensive area of the city for existing homes. The Cornwall area posted the largest decline in average sale price with a 10.5 per cent decrease to \$147,300. Based on the first half of the year, the Charlottetown CA had very little change in the average sale price, showing just a 0.4 per cent increase to \$172,100.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
