

HOUSING NOW

St. John's CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: First Quarter 2010

Solid Fourth Quarter for Local Housing Market

The St. John's region's economy performed well in 2009, resulting in employment, income and population growth – three key drivers of the housing market. Historically low mortgage rates, combined with strong fundamentals, reinforced the

demand for housing throughout the year. October to December housing starts moderated compared to 2008's hectic pace, while existing home sales and prices both advanced. Overall, the St. John's area housing market continued to be supported by positive demographic and economic trends, healthy consumer spending and on-going economic momentum spurred by the local oil sector.

Pace of Residential Construction Activity Slowed

Overall, residential construction activity slowed during the October to December period, with most of the pent-up demand from last year being met. While total housing starts moderated relative to the fourth quarter of 2008, prices experienced record growth. From an industry perspective, builder activity normalized during the quarter, as it did throughout much of 2009, with an influx of qualified workers returning to the province providing labour relief. Pent-up demand buoyed residential construction activity throughout the St. John's area during the first-half of 2009. However, activity slowed in the fourth quarter, with housing starts down close to ten per cent, or 520 versus 575 in 2008. Single-detached starts fell by 68 units or 15 per cent, with 388 starts recorded versus 456 during 2008's fourth quarter. The multiple starts segment increased 11 per cent, with 132 starts during the quarter compared to 119 a year ago. Slower construction activity was recorded in all but two submarkets during the October to December period, with Mt. Pearl posting 33 starts versus 20 during 2008's fourth quarter and St. John's City recording 235 versus 189 a year ago. Conception Bay South (CBS) recorded the largest decline with 47 per cent fewer starts. Torbay was off by 40 per cent, while Paradise and the remainder of the CMA both saw a 22 per cent reduction in housing starts. For the year, there were 1,703 total housing starts versus 1,863 during 2008, a reduction of approximately nine per cent. Of the 1,703 total housing starts, 1,385 were single-detached compared to 1,485 single-detached starts during the same period in 2008. This represented the second highest level on record in the

Figure 2

Source: CMHC

St. John's region; the record being 2008's 1,485 starts. It is notable that single-detached starts represented 81 per cent of all residential construction activity throughout the region in 2009.

Price growth continued, with the average new house price up considerably in all submarkets. In fact, it surpassed the \$320,000 mark in both St. John's City and Torbay. The average new single-detached house price for the overall St. John's area increased 23 per cent to a record \$296,737 compared to \$241,983 during the fourth quarter of 2008. Once again, prices were highest in Torbay, where the average price of all new single-detached homes absorbed or sold was \$324,643, an increase of 24 per cent over the October to December period of 2008. CBS posted the lowest average new house price of \$247,641 during the quarter. In terms of percentage price growth, CBS led this category, up 32 per cent compared to the fourth quarter of 2008, followed by St. John's City, up 29 per cent to \$320,457. Throughout

the St. John's area, approximately 65 per cent of all new construction activity fell within the \$250,000 plus range during the quarter. The largest growth in market share also occurred within this segment, which held a 41 per cent share of the market a year ago. For 2009, the average new single-detached house price was \$281,803 compared to \$230,473 in 2008, an increase of just over 22 per cent. Overall, new home price growth remained brisk throughout 2009 and during the fourth quarter, despite the moderate slowdown in construction activity during the second half of the year.

Brisk Existing Home Market Activity

Increased economic activity and in-migration to the St. John's region, combined with a stable resale market, quickly positioned the market to favour sellers early in mid-2008. The onset of the global economic downturn during the fall of that year caused a very strong local sellers' market to weaken rapidly from its third quarter 2008 peak. As a result,

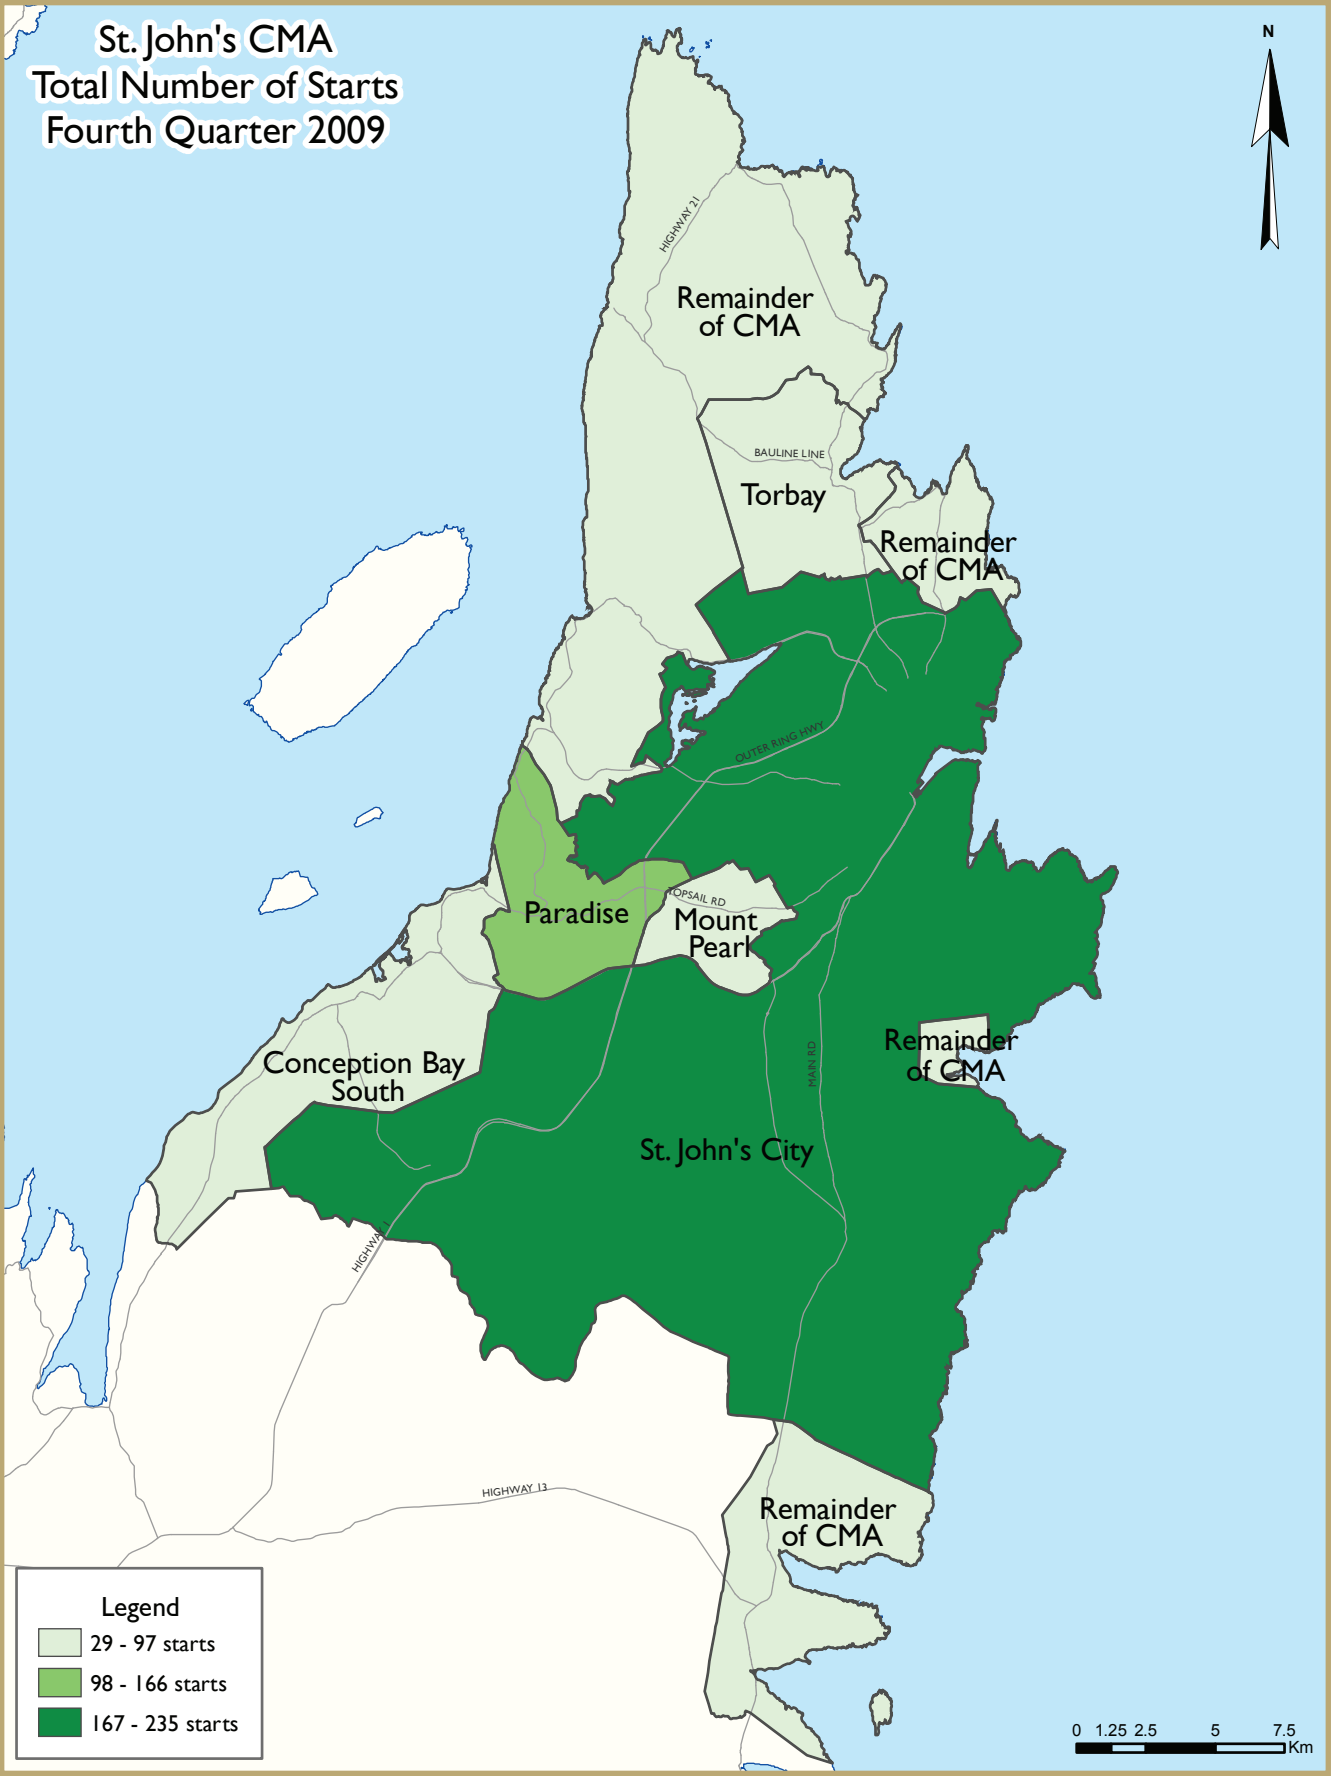

the market shifted gears into buyers' territory by the end of the year and continued to fluctuate between buyers' and balanced conditions throughout most of 2009. However, during the recent October to December period, the local resale market favoured sellers slightly.

In terms of unit sales, the market remained down moderately throughout 2009 and continued this trend until the fourth quarter. Available inventory increased approximately ten per cent and listings remained on the market 52 days on average throughout the October to December period, while prices continued to climb. For the St. John's area, there were nine per cent fewer new listings compared to the same period last year. However, active listings averaged a moderately higher level of 1,137 during the quarter versus 1,037 during the fourth quarter of 2008, when sales activity was lower. Having peaked at a record 40 per cent in October 2008 during the height of the sellers' market, the unadjusted sales-to-active listings ratio was 29 per cent in October of 2009 and remained near that level in November before jumping to 40 per cent in December and matching the previous record set a year earlier. During the quarter, the sales-to-active listings ratio averaged 32 per cent compared to a similar 31 per cent during the same period in 2008, signalling sellers' fourth quarter resale market conditions.

MLS® Sales and Prices Increased

With increased sales of existing homes and higher inventory available throughout the St. John's area during the fourth quarter, the average MLS® residential price continued to appreciate. It climbed to another

record level peaking at \$241,462 in December. The number of MLS® sales increased eight per cent with 1,070 sales compared to 2008's fourth quarter sales of 988 units. Provincially, there were 1,293 MLS® sales. For the St. John's region, the average MLS® residential price was 11 per cent higher than it was a year ago, maintaining a solid two-year growth trend of approximately 35 per cent to the end of 2009. With increased inventory levels and buyers during the October to December period, the average MLS® residential price advanced 11 per cent, averaging \$226,006 compared to \$203,904 during the fourth quarter of 2008. Provincially, the average MLS® residential price was \$212,992. For the St. John's area, the relative strength in the average MLS® residential price was stimulated by economic and demographic fundamentals, as well as an 80 per cent increase in sales in the \$350,000 plus segment of the market throughout 2009.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
