

# HOUSING NOW

## Winnipeg CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: March 2010

## New Home Market

### Single and multiple starts see gains in February

The Winnipeg Census Metropolitan Area (CMA) saw 252 housing units started in February 2010, up from 103 starts in February 2009. Another strong month of multi-family activity fuelled the gain, although single-detached construction also recorded an increase on a year-over-year basis.

Multi-family starts, including semi-detached units, rows, and apartments, totalled 151 units in February 2010. Of this, 130 were rental units. This brought total multiple starts for January and February 2010 to 283 units, more than half of last year's annual production. This is the highest number of multi starts recorded in the first two months of the year since 1987. Over the last ten years, the average number of multi-family starts recorded over the first two months of the year has been 56 units.

Figure 2

Source: CMHC

Winnipeg homebuilders poured foundations for 101 single-detached homes in February 2010, bringing total single starts thus far in 2010 to 217 units, nine per cent more than the same period in 2009. Most of this activity was concentrated within city boundaries. The city captured 87 single-detached starts versus 14 in areas surrounding Winnipeg.

### Total supply trends down

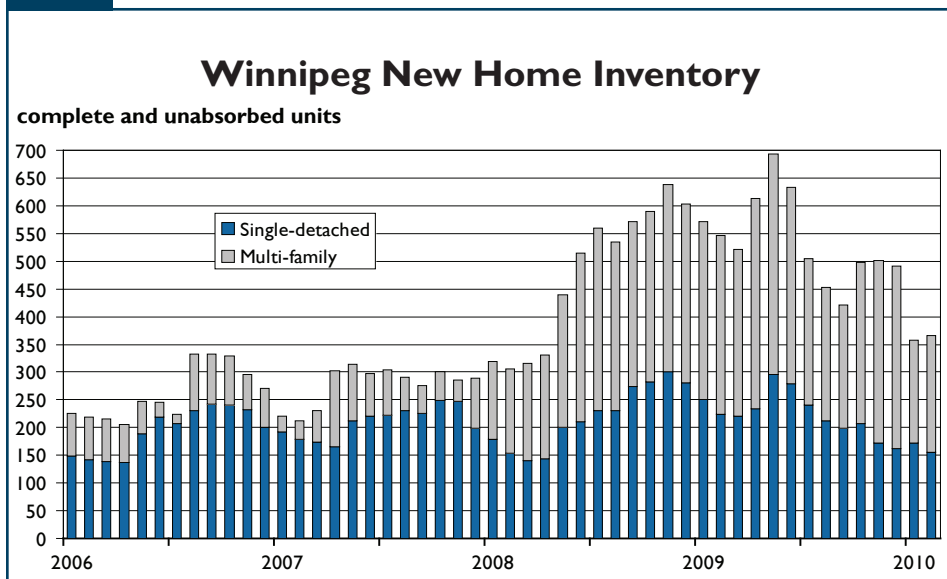

The total supply of housing units, including those units that were under construction and completed and unoccupied, has seen year-over-year declines since October 2008. Total supply stood at 1,932 housing units in February 2010, down 23 per cent from February 2009.

Most of the units in supply consisted of housing units that were under construction. There were 781 singles and 785 multiple units at various stages of construction in February. The number of single units under construction was down 14 per cent from February 2009 while multis were down 24 per cent from the same month in 2009.

Looking at the multi units under construction in more detail, semis were down nine per cent compared to February 2009, while the number of apartment units under construction was 27 per cent lower than February 2009. Row units under construction totalled 80 units, up 13 per cent from the February 2009 figure of 71 units.

The total completed and unoccupied units figure was down 33 per cent from last year in February. The number of multiple units in inventory was down by 34 per cent on a year-over-year basis in February. The number of single-detached units counted as completed and unoccupied was down 31 per cent from the previous year to 155 units in February 2010.

### Average price on the rise

So far this year, in the Winnipeg CMA, the estimated average price of the 146 ownership units absorbed reached approximately \$380,000, up from an estimated \$360,000 one year earlier. Within the city boundaries, there have been 118 ownership units absorbed to the end of February 2010. The weighted average price for these units reached approximately \$370,000 compared to \$350,000 at this time in 2009. In February, approximately 87 per cent of the absorptions were priced in excess of \$300,000.

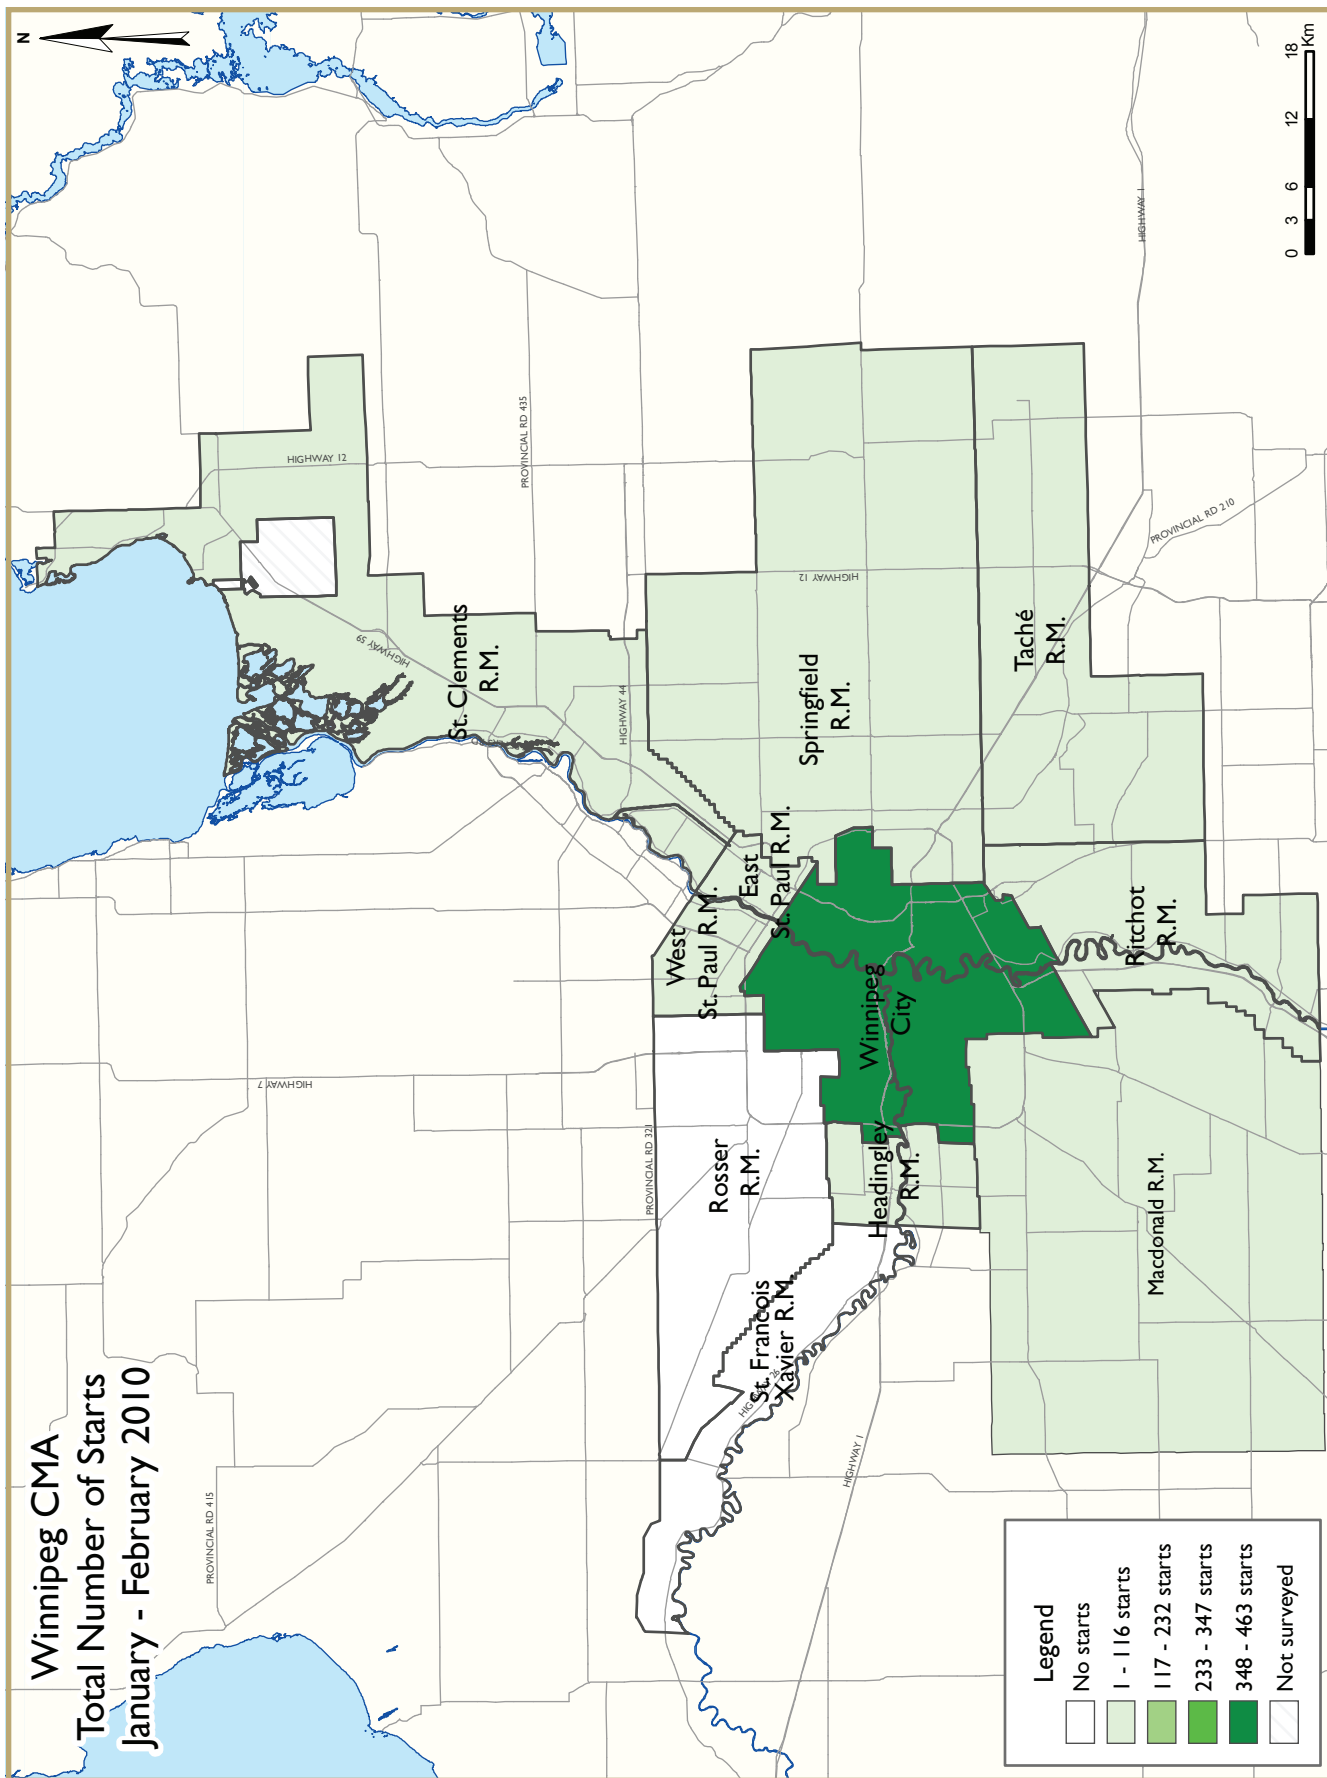

## HOUSING NOW REPORT TABLES

### Available in **ALL** reports:

- 1 Housing Activity Summary of CMA
- 2 Starts by Submarket and by Dwelling Type – Current Month or Quarter
- 2.1 Starts by Submarket and by Dwelling Type – Year-to-Date
- 3 Completions by Submarket and by Dwelling Type – Current Month or Quarter
- 3.1 Completions by Submarket and by Dwelling Type – Year-to-Date
- 4 Absorbed Single-Detached Units by Price Range
- 5 MLS® Residential Activity
- 6 Economic Indicators

### Available in **SELECTED** Reports:

- 1.1 Housing Activity Summary by Submarket
- 1.2 History of Housing Activity (once a year)
- 2.2 Starts by Submarket, by Dwelling Type and by Intended Market – Current Month or Quarter
- 2.3 Starts by Submarket, by Dwelling Type and by Intended Market – Year-to-Date
- 2.4 Starts by Submarket and by Intended Market – Current Month or Quarter
- 2.5 Starts by Submarket and by Intended Market – Year-to-Date
- 3.2 Completions by Submarket, by Dwelling Type and by Intended Market – Current Month or Quarter
- 3.3 Completions by Submarket, by Dwelling Type and by Intended Market – Year-to-Date
- 3.4 Completions by Submarket and by Intended Market – Current Month or Quarter
- 3.5 Completions by Submarket and by Intended Market – Year-to-Date
- 4.1 Average Price (\$) of Absorbed Single-Detached Units

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
