Date Released: June 2010

New Home Market

Winnipeg single-detached starts record fourth consecutive month of year-over-year gains

Builders in the Winnipeg Census Metropolitan Area (CMA) began construction on 205 units of all types in May, up from 136 units in May 2009. That result, driven largely by gains in single-family construction, represents

the fifth consecutive month of year-over-year gains in new housing construction. To the end on May 2010, total starts for the year reached 1,042 units, a considerable improvement from the 649 units started over the first five months of 2009.

For the third consecutive month, the majority of housing starts were in the single-detached sector. The Winnipeg CMA recorded 186 starts, compared to 136 in May 2009. That was the strongest monthly performance thus

far in 2010 and higher than any monthly result in 2009. Through the first five months of the year, single-detached starts reached 705 units, 31 per cent more than were started over the same period one year earlier. The single-detached segment has seen impressive gains thus far in 2010 when compared to a relatively soft performance for much of 2009. The low interest rate environment, coupled with an improving local economy, has contributed to the recent demand.

Completions of single-detached units within the Winnipeg CMA declined year-over-year in May 2010 by 44 per cent to 163 units. At 135 units, single-detached absorptions were 42 per cent lower than the previous year. As a result, single-detached inventories increased by 28 units since April 2010 to 169 completed but unabsorbed dwellings. However, the volume of completed and unabsorbed singles in May 2010 was 43 per cent lower than May 2009, when there were 295 such homes sitting in inventory.

The average price of a new single-detached home absorbed in May 2010

was \$349,246, down 1.7 per cent from the average value reported in May 2009. May's median price of \$329,000 was 2.8 per cent higher than the previous year. This discrepancy is due to fewer homes absorbed in the highest price points in May 2010 compared with one year prior.

The multi-family sector continued with modest levels of activity in May, recording only 19 starts. Of those,

none were apartments, resulting in only eight such units started in the past three months of the year. Row housing has formed the majority of multi-family construction over that period, with 40 row units started out of the 54 total multi-units started in March, April and May. The 337 multi starts recorded over the first five months of 2010 were due to unusually strong performances in January and February, when 283 units were started.

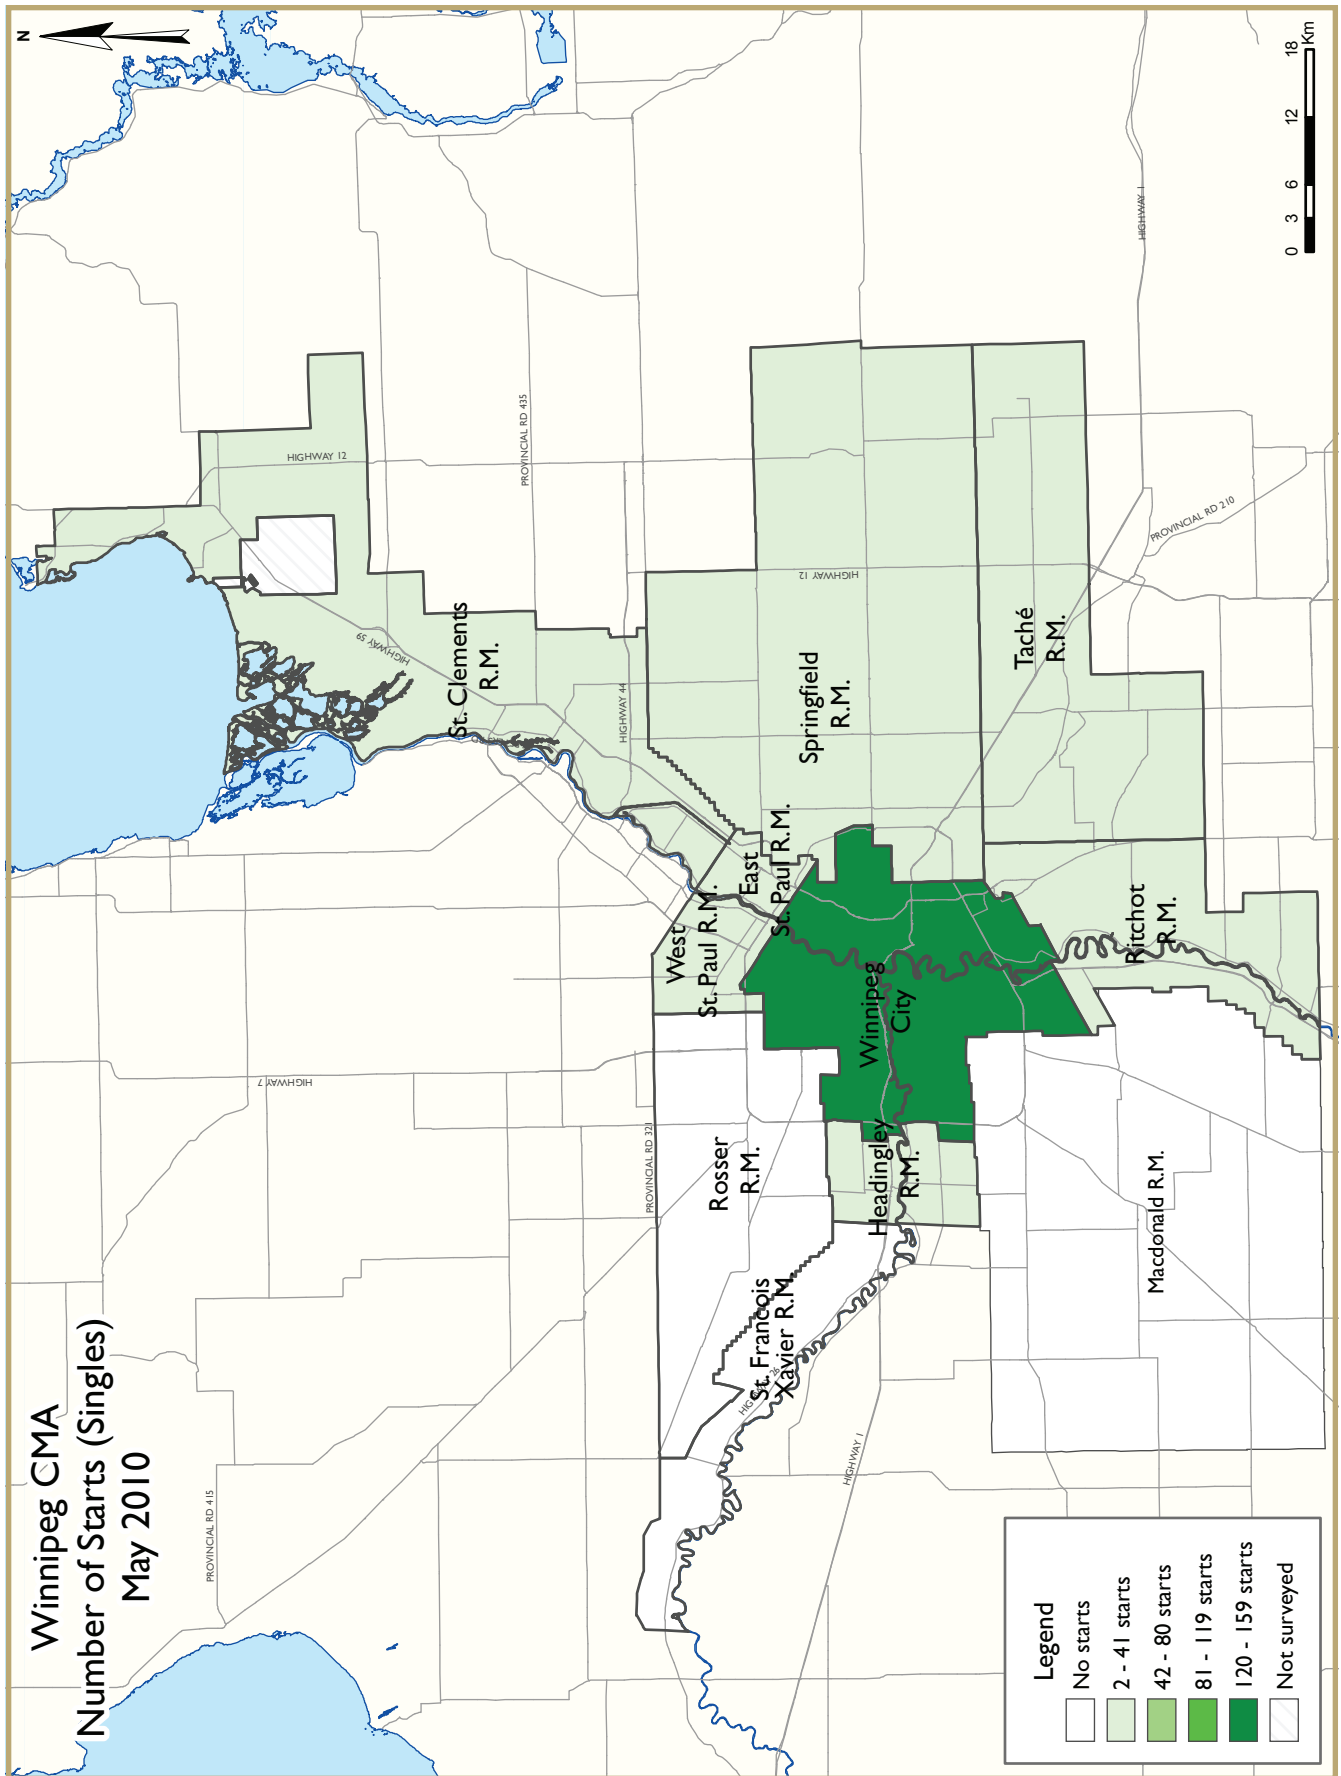

The muted activity in the multi sector in recent months continued to push supply levels downward from their peak levels of 2008. The total supply of multi-family units, including those under construction or completed but not occupied, reached 783 units in May, a 35 per cent decrease from the previous year. That compares to a ten-year average of 789 units in May. At 607 units in May, the volume of multiples under construction was 22 per cent lower than the previous year. Complete and unabsorbed multiples, meanwhile, totalled 176 units in May, the lowest total in more than two years and 59 per cent lower than May 2009.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
