Victoria CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: April 2010

Residential Construction Picks Up Across Victoria CMA

The first quarter of 2010 was much busier for local homebuilders than the start of 2009. Foundations were poured for 634 new homes during the first quarter – the highest level since 1994 and well above the 10-year average (2000-2009 average: 356 starts).

In addition to the continued strong levels of single-detached starts, builders have been busy with several multi-family projects. Nearly 400 multi-family starts were recorded across the Victoria CMA during the first quarter of 2010. There were more multi-family starts in the first quarter 2010 than for the entirety of 2009.

Figure 2

Source: CMHC

The rebound in residential construction activity is projected to continue through the year, as builders/developers benefit from the strong resale market (spill-over demand) and improving economic and labour market conditions.

At the end of March 2010 there were 1,824 homes under construction across the Victoria CMA. This represents a 19 per cent increase from the November 2009 level when construction activity bottomed out, but well below the recent peak of 3,556 in July 2008. While the inventories of new single-detached, semi-detached, and row homes have fallen, there remains an elevated number of completed but unsold new apartments across the Victoria CMA. Through the first quarter of 2010, 331 completed apartment condominiums remained unsold – well above the monthly average over the past ten years (96). The elevated inventory level is a result of the record number of condominium completions recorded in 2009.

Resale Supply Rises in Response to Price Growth

Potential homebuyers are benefiting from increased supply. Strong resale market demand and rising prices were responsible for a surge in listings during the first quarter of 2010. Nearly 3,900 homes were added to the MLS® listings over the first quarter, pushing the number of active listings to the highest level since May 2009.

Like supply, first quarter demand was also strong, as buyers continued to flock to the resale market before mortgage rates start rising. Over 1,700 existing home sales were recorded during the first three months of the year, a 41 per cent increase relative to the first quarter of 2009.

Figure 3

Source: Multiple Listing Services (MLS) is a registered certification mark owned by the Canadian Real Estate Association (CREA).

The significant increase in supply caused the Victoria resale market to return to more balanced conditions. The key barometer of market conditions (sales to new listings ratio) moved into balanced territory, signalling that the market is cooling. Expect to see fewer multiple offer situation and generally calmer market conditions moving forward.

Despite more balanced conditions, resale prices continue to rise across Victoria. The first quarter marked the fourth consecutive quarterly increase in the average Victoria resale price. At \$504,500, the average price has now surpassed the previous peak achieved two years ago (2008 Q1: \$498,926). More balanced market conditions will meet less upward pressure on prices as we move through the year.

HOUSING NOW REPORT TABLES

Available in **ALL** reports:

- I Housing Activity Summary of CMA
- 2 Starts by Submarket and by Dwelling Type – Current Month or Quarter
- 2.1 Starts by Submarket and by Dwelling Type – Year-to-Date
- 3 Completions by Submarket and by Dwelling Type – Current Month or Quarter
- 3.1 Completions by Submarket and by Dwelling Type – Year-to-Date

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
