HOUSING MARKET INFORMATION

HOUSING NOW Greater Sudbury CMA

Date Released: Fourth Quarter 2010

New Home Market

Sudbury third quarter starts below average

Although the bellwether Greater Sudbury single-detached residential construction market has not matched the average performance of the last five years, third quarter single-detached starts were sharply higher than last year's same period. Row, semi-detached and apartment starts

reached last year's same level of activity which was the highest since 1994. The first nine months of 2010 closed with a total of 188 row, semidetached and apartment starts, up one unit from last year.

Single-detached starts in Sudbury have been concentrated in Valley East for the last five years. So far in 2010, over one-third of all single family housing starts have broken ground in Valley East followed by Rayside-Balfour,

Lockerby and New Sudbury. Going back to 1988, between 15 and 34 per cent of all single-detached homes have been constructed annually in "the Valley". Cheaper lot prices and the availability of land are the primary reasons for the focus in this region.

As the market continues its recovery path, the number of completed and unabsorbed single detached units in Sudbury continues to decrease. At its peak in 2009, the new construction market reached the highest number of completed and unabsorbed single family homes since 1995. So far this year, this number has reduced by almost half to ten units in light of the recent employment improvement and less speculative building by the Sudbury homebuilding community.

Of the three other major cities in Northeastern Ontario, North Bay had the most residential construction activity in the first nine months of 2010 with 125 units commencing, including 12 multi-family units. Moreover, single-detached starts in this city are over fifty per cent ahead of a busy 2009. Despite this, North Bay third quarter starts could not compete with last year's levels to September 30th and was 24 per cent behind. North Bay is benefitting from its economic diversity. This diversity - and general economic well-being that has accompanied it - has allowed the resale market to have the most consistent price growth of any Northern Ontario city going back to the early 1980s. The two other major cities, Sault Ste. Marie and Timmins, completed the first nine months ahead of 2009.

The analysis of housing activity in Sudbury, Sault Ste. Marie and North

Bay recounts absorptions by volume and by price range. The \$350,000 plus price range is the most popular in the Sudbury and North Bay thus far in 2010, while the \$250,000 -\$300,000 range is the most popular in Sault Ste. Marie. The higher price ranges in Sudbury and North Bay reflect the high prices in the resale market that have spilled over to the new construction market. With resale prices now averaging over \$200,000 in both Sudbury and North Bay, more prospective home purchasers may be looking at new construction given the apparent narrowing in the gap between resale and new housing. The Sault St. Marie market remains the most inexpensive from a new home perspective.

Resale Market

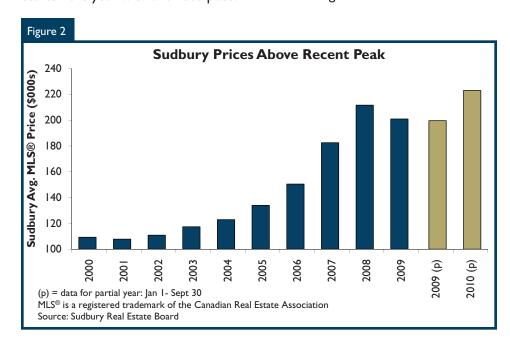

Sudbury resale prices show marked improvement

After a slower 2009, the existing home market in Greater Sudbury started the year with a furious pace.

Nevertheless the market slowed in the third quarter and is on track to be the slowest since 2003, from a sales volume perspective. Meanwhile, average prices continue to grow and earlier in the year, topped prerecession highs. Resale market demand has been strongest in the \$200,000 to \$400,000 price range.

With demand slowing and listings in good supply, conditions in the Greater Sudbury resale market are considered to be in a strong balanced position. New listings faltered in the third quarter; however, for the year, listings are at their highest level since 1999.

A combination of factors is at play in explaining the increase in Greater Sudbury residential listings. The conclusion of the strike at Vale Inco has sparked renewed interest in buying and selling homes, particularly for those looking to move up in the market. For some, the end of the strike provides a time to consolidate debt and possibly lower their monthly costs by selling their home and moving to a smaller home or

perhaps consider moving into rented accommodation. For others who had taken on alternate employment during this time, the end of the strike marked a time to make a decision to remain in Sudbury or in another community.

Average prices were up so far this year sitting slightly above \$223,000, a strong performance given the weakness present for most of 2009. The modest global economic recovery has been led in large part

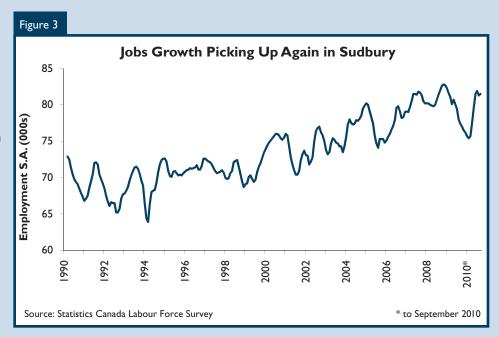

by commodities and the labour settlement at Vale Inco. These are the key factors that have caused the resale market to improve in Greater Sudbury.

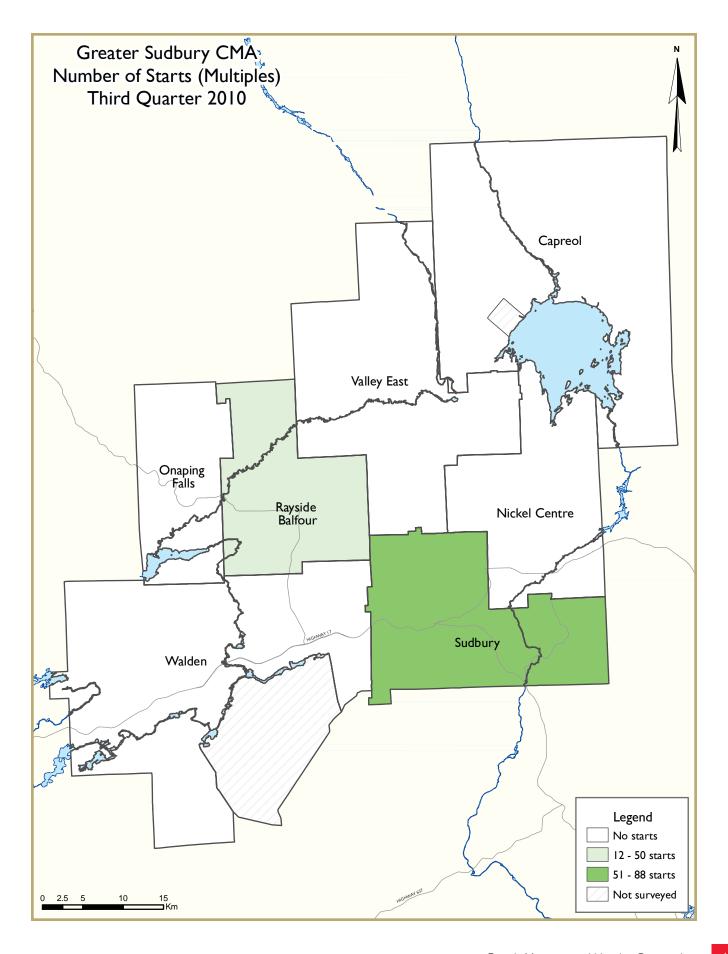

Economy: Good producing sector led the recovery in Sudbury

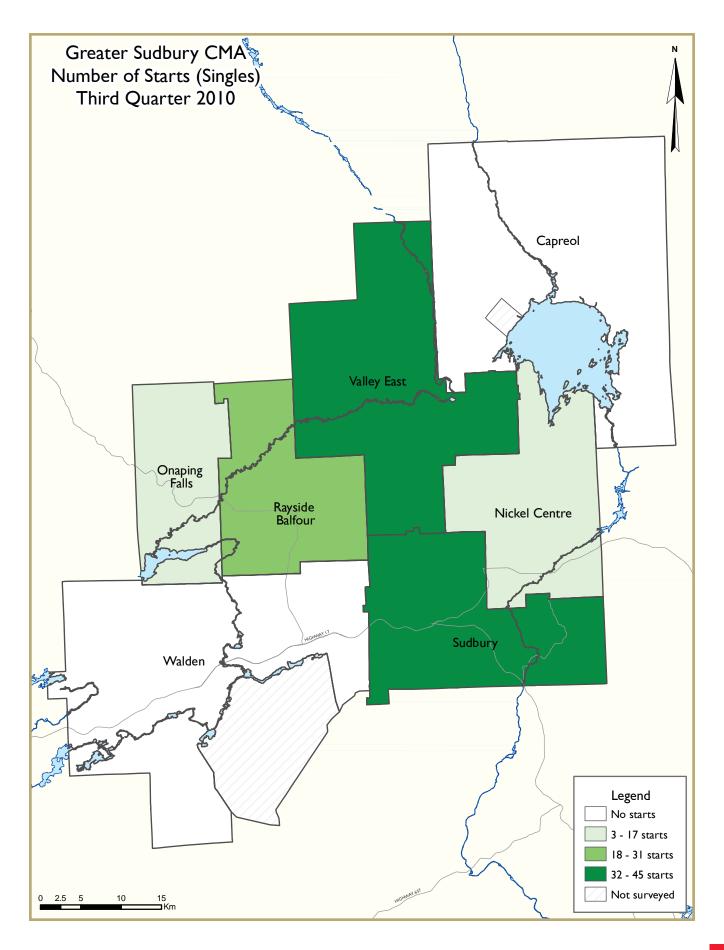

Nickel and other metals' prices are on the upswing after reaching a trough in Q1 2009. The increase has been positive for Northern Ontario, a region that relies heavily on this sector. Nickel, used in the production of steel, is influenced by demand from the steel industry. According to the World Steel Association, production of steel from the world's top 66 producing countries to the end of

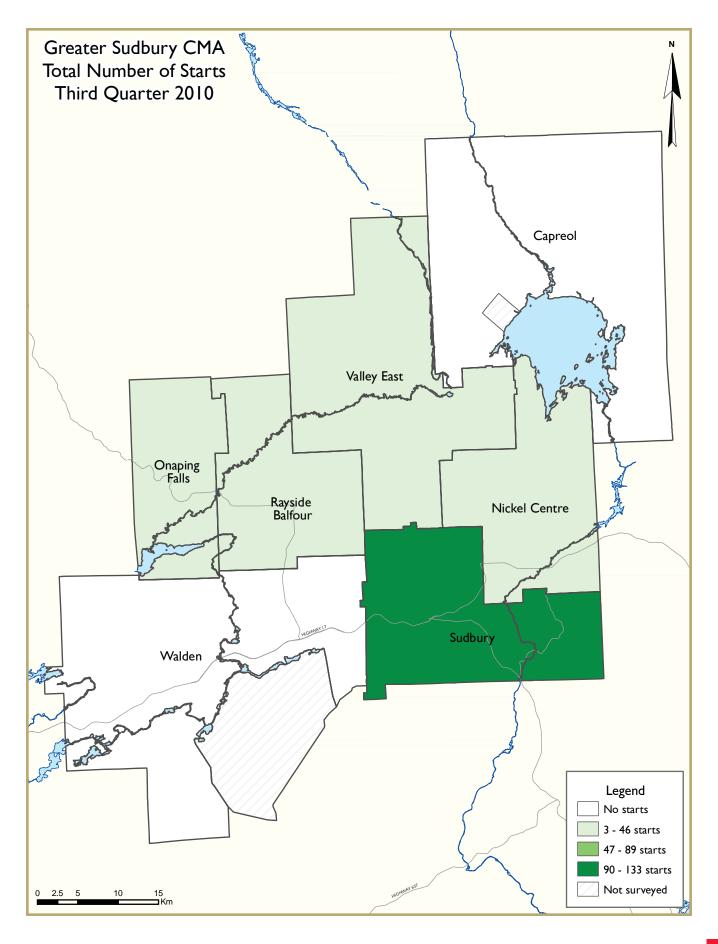

September is trending up, which bodes well for the Vale Inco and Xstrata operations in Sudbury, not to mention Quadra FNX. Attracted by many well-paying mining jobs that have pushed average weekly earnings up by 3.2 per cent, the labour force has been growing substantially, outstripping growth in employment and topping 90,000 in July for the first time ever.

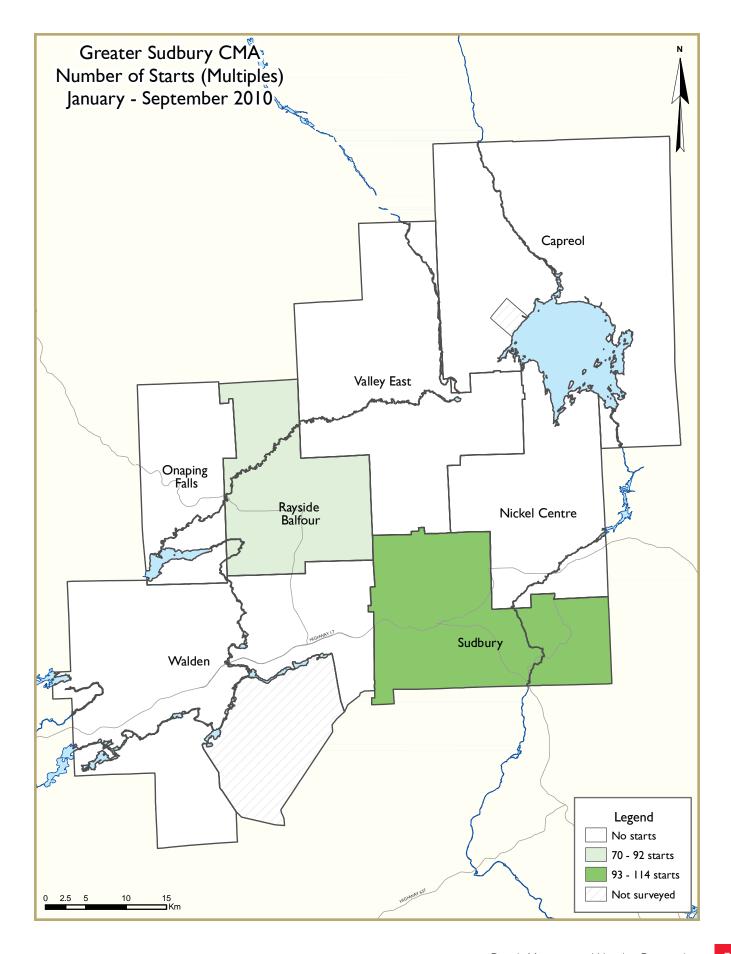

Discouraged workers returning to the labour force and in-migration in anticipation of an improved job market are keys to the rise in the labour force and hence the rise in the unemployment rate. Finishing September, Sudbury's unemployment rate is actually unchanged from one year ago but the economic environment in Sudbury has completely changed now that the Vale Inco strike has concluded. The recovery has been led by the goods producing sector, particularly that which relies on the mineral and metals exploration and production sectors.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "**Apartment and other**" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada's 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.

For more information, visit our website at www.cmhc.ca

You can also reach us by phone at I-800-668-2642 or by fax at I-800-245-9274. Outside Canada call 613-748-2003 or fax to 613-748-2016.

Canada Mortgage and Housing Corporation supports the Government of Canada policy on access to information for people with disabilities. If you wish to obtain this publication in alternative formats, call 1-800-668-2642.

The Market Analysis Centre's (MAC) electronic suite of national standardized products is available for free on CMHC's website.
