## Edmonton CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: April 2010

## New Home Market

### Housing Starts Maintain Vigorous Pace in March

Edmonton's new home builders continued to ramp up production in March. Total housing starts in the Edmonton Census Metropolitan Area (CMA) reached 813 units in March compared with 135 units in March 2009. This represented the ninth

consecutive month of year-over-year improvements in housing starts. After three months, the industry has initiated 2,032 dwelling units, up from 761 units started during the first quarter of 2009.

Single-detached home builders started work on 513 units in March, almost five times the 105 singles started in March of last year. The industry is attempting to replenish single-

Source: CMHC

detached inventories that have been driven to low levels by a reduction in completions and relatively brisk demand. So far this year, foundations were poured for 1,394 units compared with 401 singles recorded in the first three months of 2009.

The inventory of completed and unoccupied single-detached units in March was down by two units from the previous month to 402. Completions totalled 349 units while absorptions reached 351 dwellings. The inventory in March was down by 56.5 per cent from this time last year. With units under construction in March up by 85 per cent from a year prior, completions should begin to trend upward in the months ahead.

The average price for single-detached homes absorbed in March fell by 18.6 per cent year-over-year to \$465,393. For the year-to-date, the average absorbed price across Metro stood at \$468,223, representing a 21 per cent decline from the first quarter 2009 average. Readers are cautioned that absorbed prices in many cases represent the price negotiated prior

to the start of construction.

Multiple dwelling starts, which consist of semi-detached, row, and apartment units, totalled 300 units in March, representing a sizable gain over the 30 multiple unit starts tallied in March of last year. The majority of multiple starts were destined for the homeowner or condominium markets, although 12 apartment units were intended for the rental market.

To the end of the first quarter, multiple starts have risen by 77 per cent year-over-year to 638 units due to rebounding activity in semi-detached and row dwellings. While apartment starts were up in March from the same month last year, production levels so far were down by 64 per cent from January to March of 2009 due to persistently high inventories.

Multiple unit completions totalled 200 units in March, largely unchanged from the same month last year. Multi-unit absorptions increased by six per cent year-over-year to 252 units. With absorptions outpacing completions, the inventory of completed and

unoccupied multis decreased month-over-month to 965 units. While inventories in March were still one third higher than this time last year, they have been largely trending downward over the past six months. Almost three-quarters of the multiple unit inventories on-hand in March were apartments.

## Resale Market

### Balanced Conditions in 1st Quarter

Residential sales reported by the Realtors® Association of Edmonton (RAE) increased by 22 per cent year-over-year in the first quarter but the gap over last year's performance will narrow in the months ahead. This time last year, sales on the MLS® were down by 22 per cent from the same three month period in 2008 as consumers faced a steady diet of negative news about the economy.

Supply levels on the MLS® were down year-over-year at the end of the first quarter but a strong improvement in new listings during March helped to bolster active listings from the beginning of the year. The sales-to-active listings ratio stood within the balanced market range in March at 23 per cent. The typical listing period in the first quarter averaged 48 days, also in balanced market terrain. CMHC expects balanced market conditions to prevail throughout 2010, providing some moderate gains to average sale prices.

The average residential resale price rose by 5.5 per cent year-over-year in the first quarter to \$327,793. Price growth has been stronger for single-detached homes than for condominiums, as the supply-demand relationship for condos has been slightly more favourable for buyers.

Both categories have seen increased sales at higher price points, indicative of increased move-up activity and stronger competition for moderately-priced units. For single-detached units, the average sale price increased by 7.6 per cent year-over-year in the first quarter to \$377,189, with increased sales in units priced over \$350,000. The average condominium sale price rose by 4.8 per cent over January to March of last year to \$242,157, with improved sales of units priced above \$300,000.

## Economy

### Labour Market Slow to Recover

Edmonton's labour market has been slow to improve during the first quarter of 2010. The seasonally adjusted unemployment rate for Greater Edmonton stood at 7.3 per cent in March, down from the peak levels reported in October of last year but well above the 4.8 per cent level recorded in March 2009. Average employment levels in the first three months of 2010 were down by 2.2 per cent from January to March 2009. Gains in part-time

Figure 3

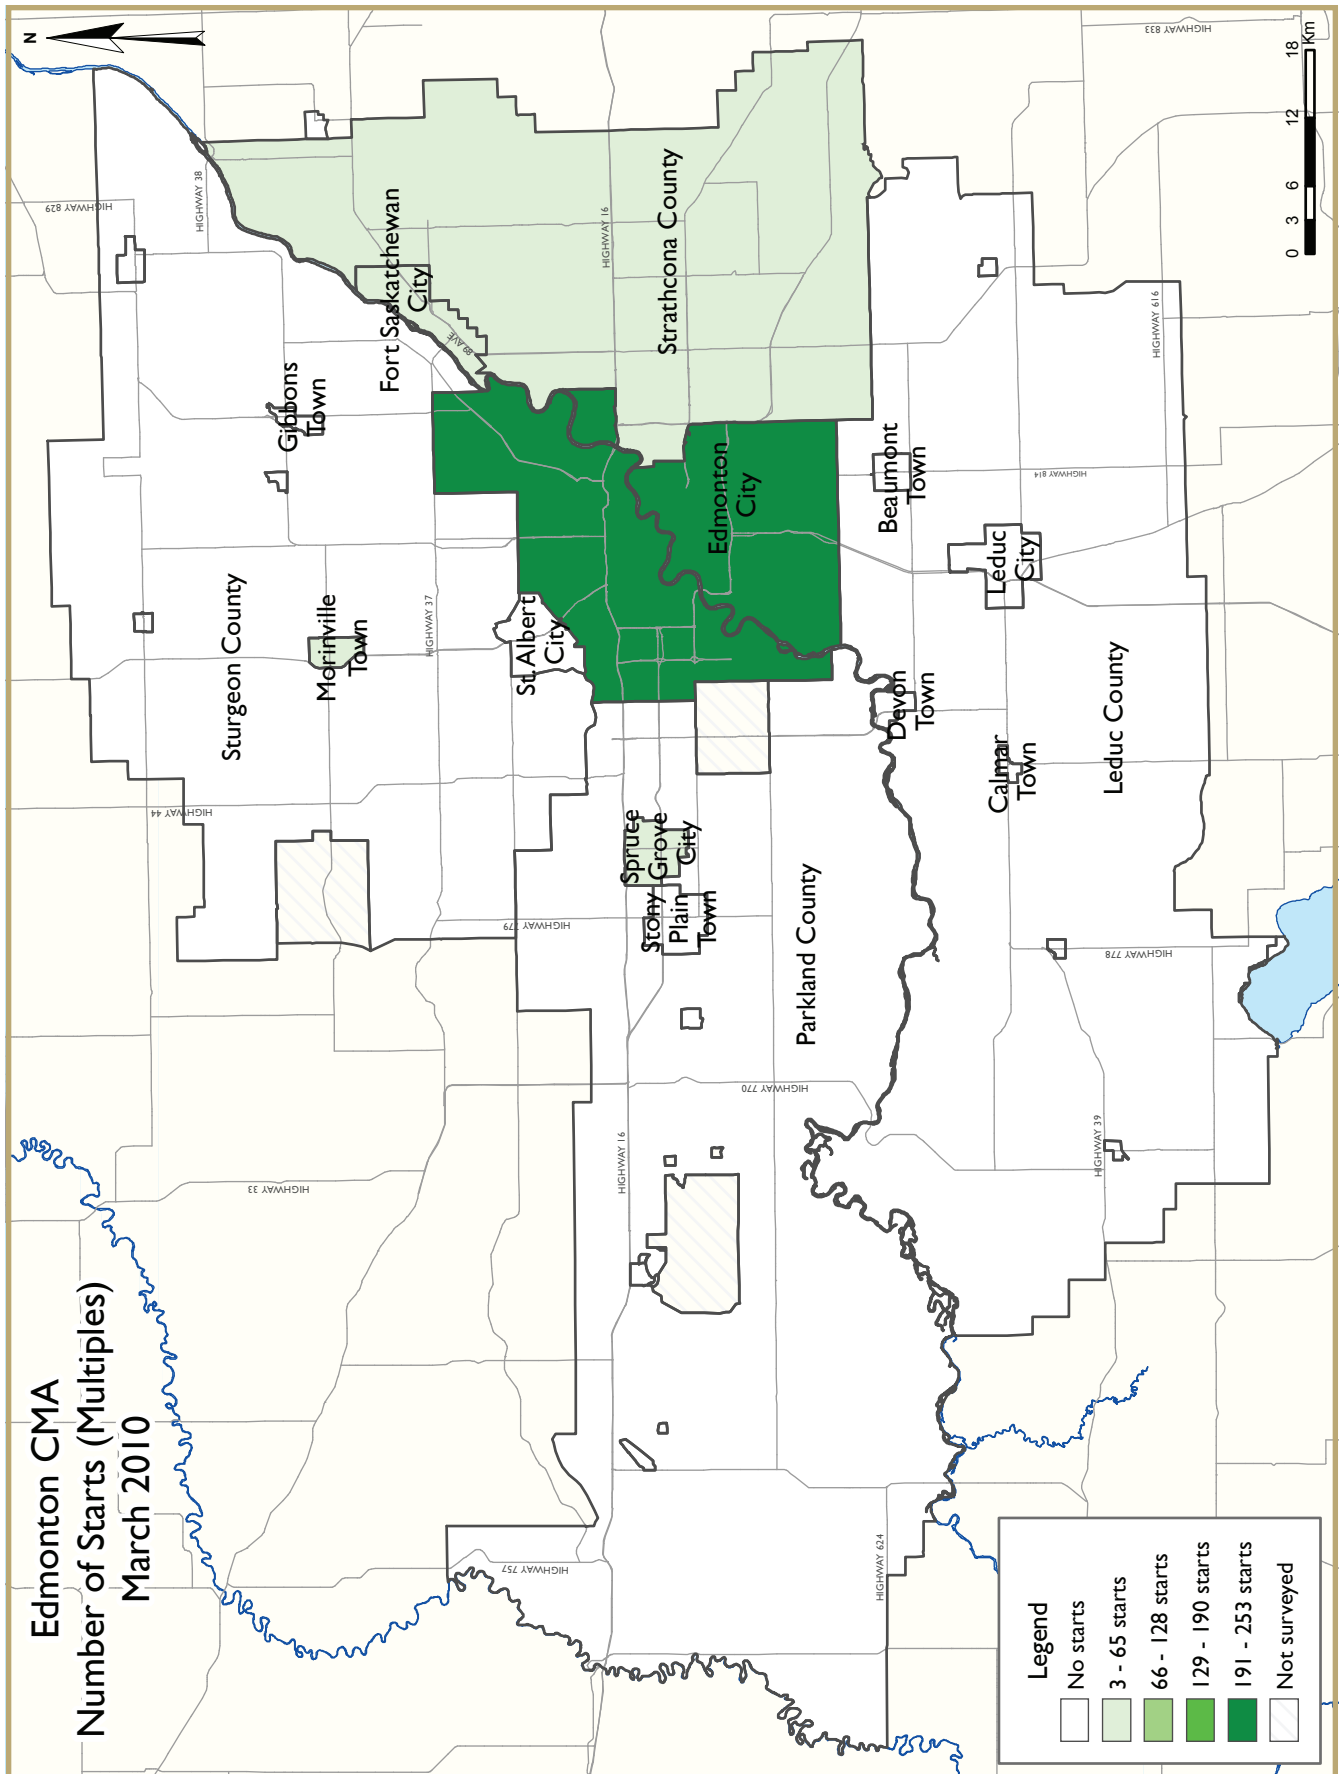

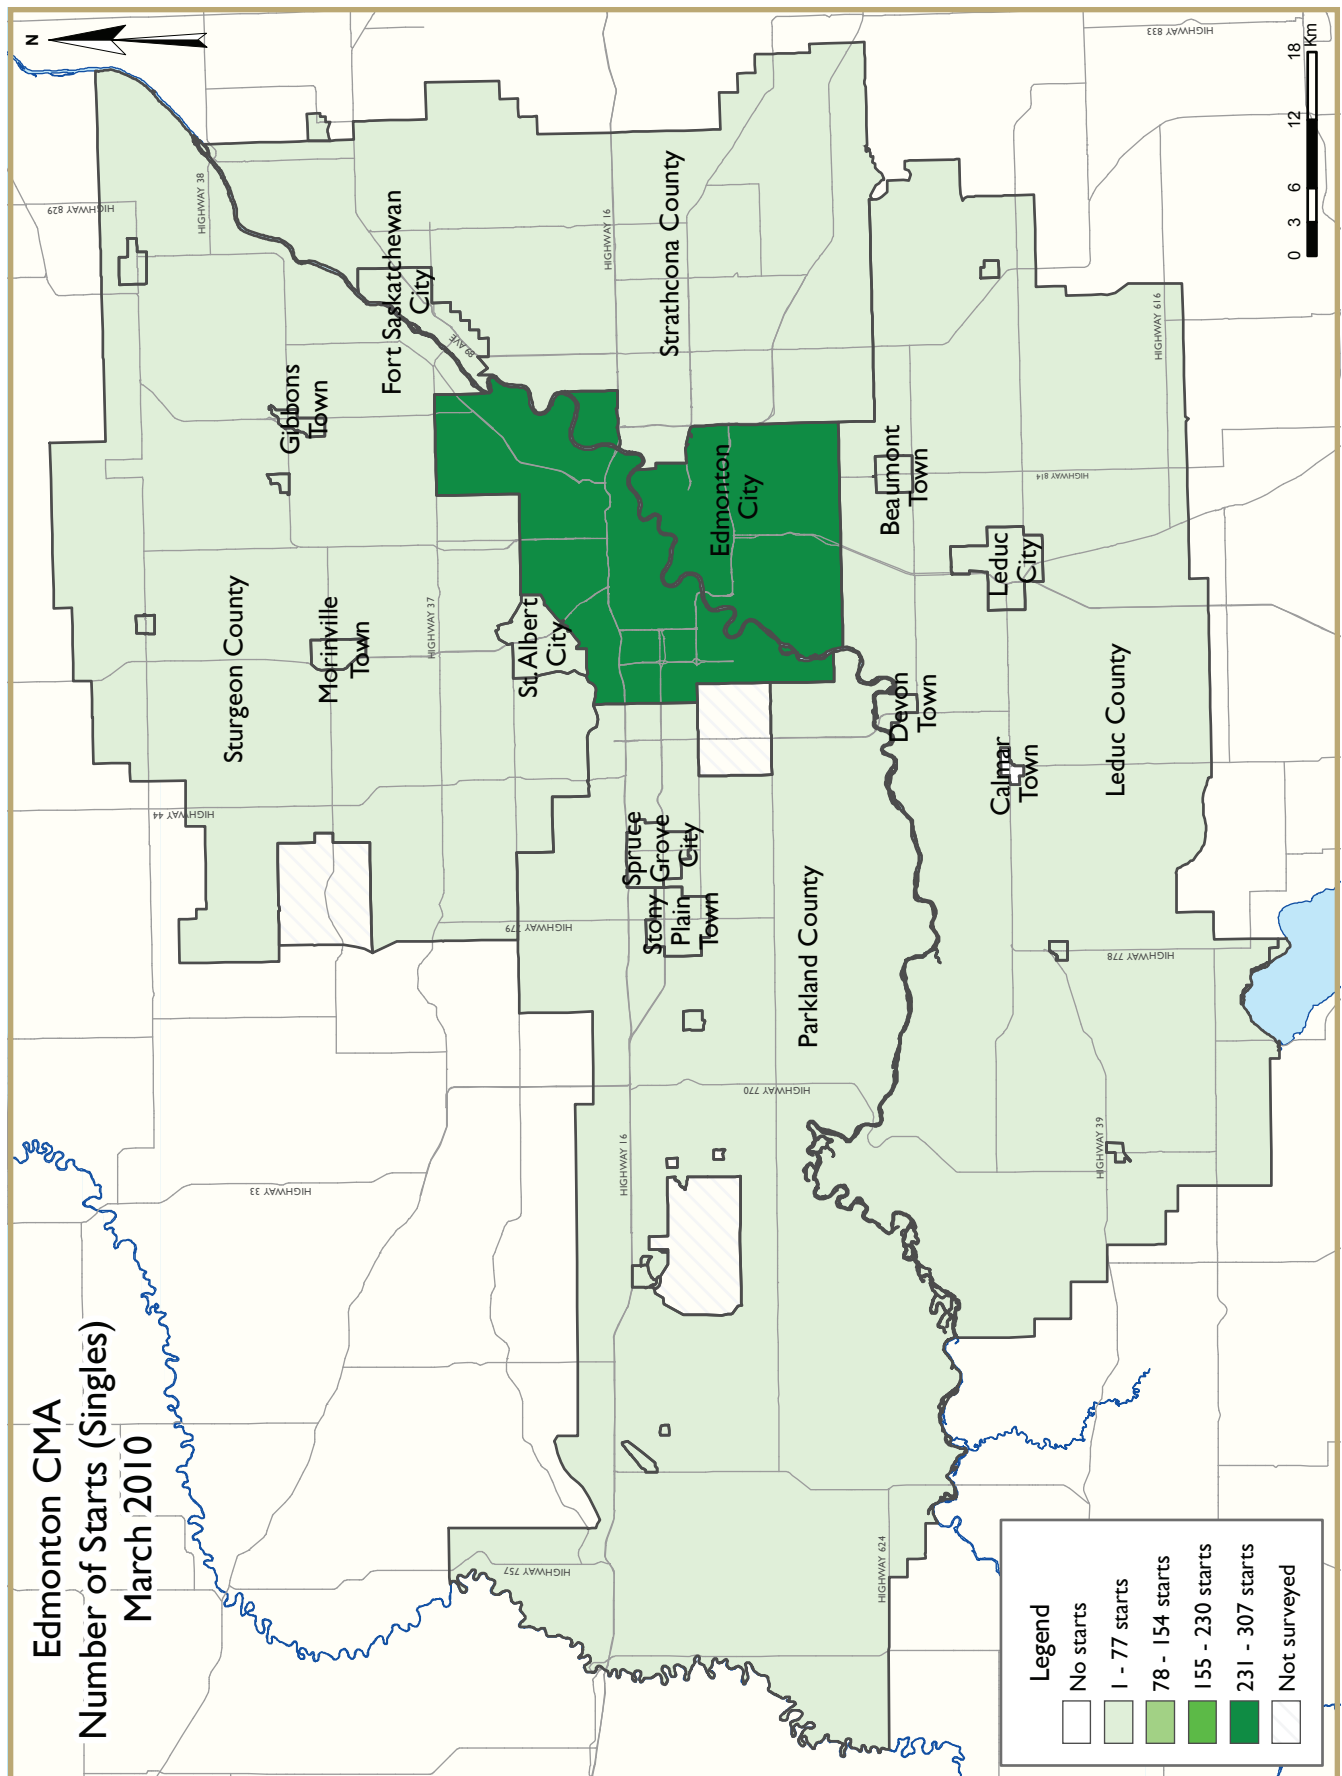

Source: RAE

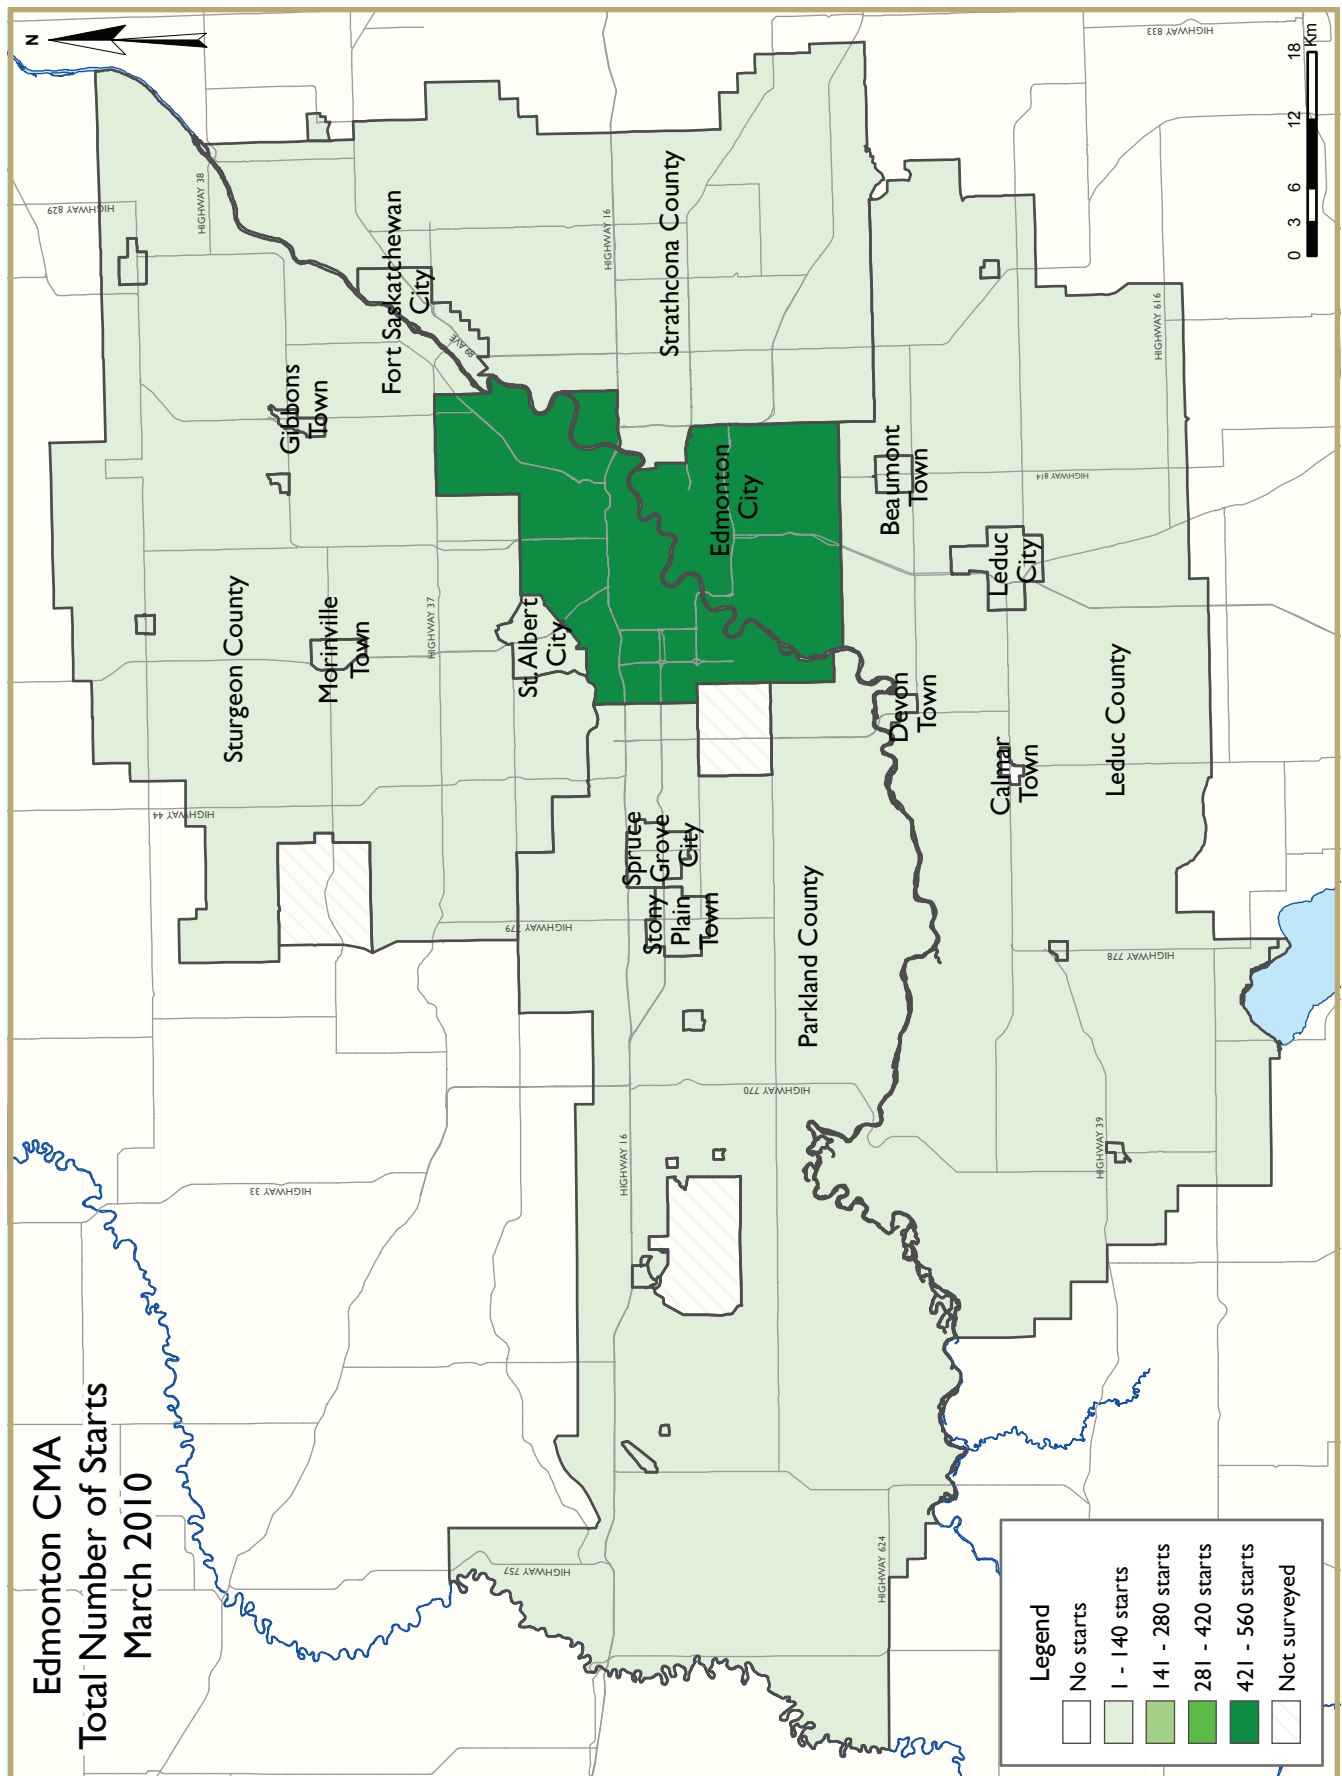

jobs were countered by reductions in full-time employment. The higher unemployment levels are slowing wage gains. Statistics Canada's Average Weekly Earnings data showed a modest gain of 0.5 per cent on average in the first quarter, compared with a 5.9 per cent average rise in the first three months of 2009.

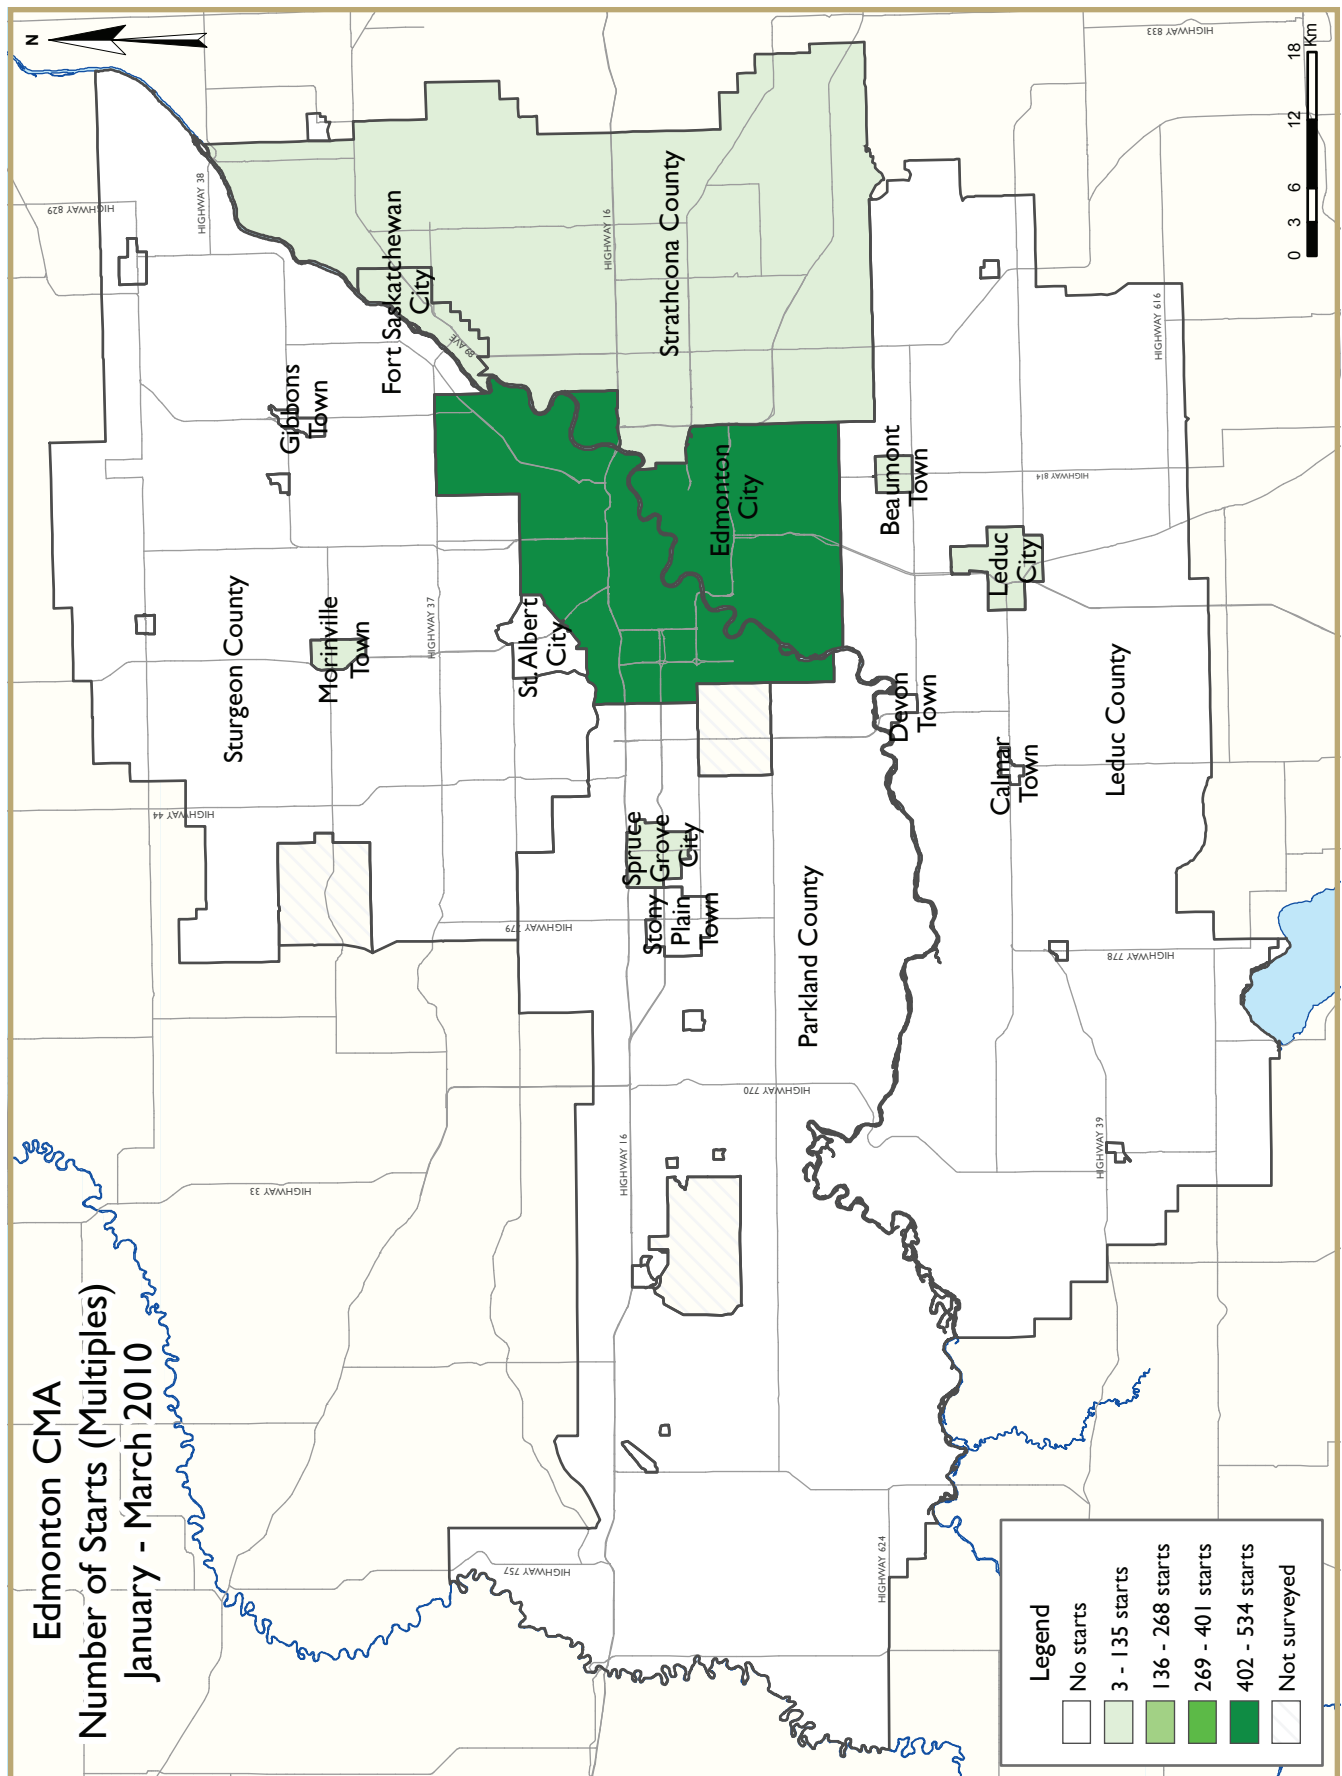

According to Statistics Canada quarterly estimates, Alberta's population growth rate slowed during the second half of 2009 largely due to

reduced levels of in-migration from other provinces. In the final quarter of 2009, the province lost almost 2,800 persons to other provinces on a net basis. Alberta also experienced a net loss of 1,425 in total net non-permanent residents, the first such decrease since the fourth quarter of 2002. Overall the province managed a moderate gain in total net migration due to the offsetting effects of 4,720 international net migrants.

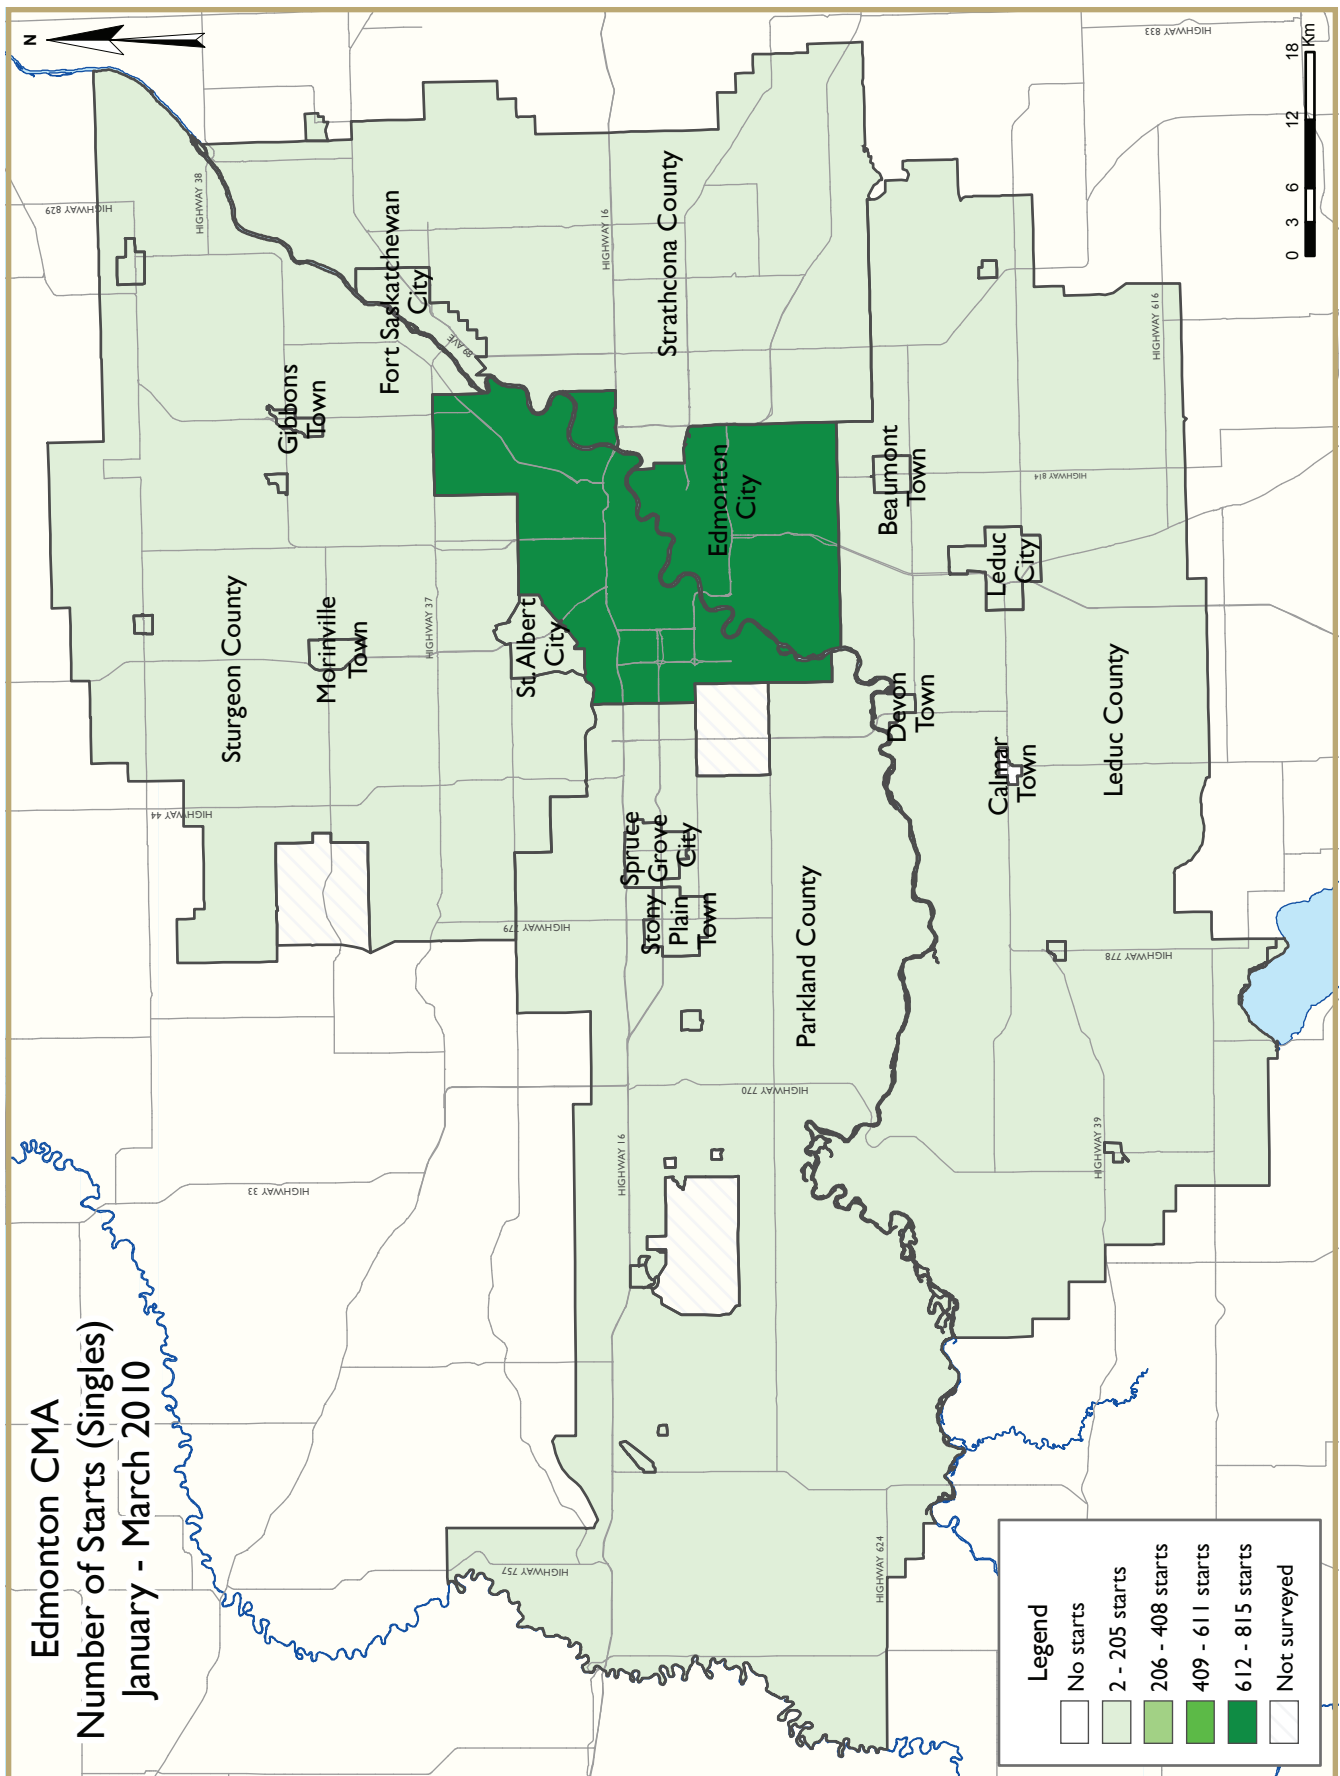

## HOUSING NOW REPORT TABLES

### Available in **ALL** reports:

- I Housing Activity Summary of CMA
- 2 Starts by Submarket and by Dwelling Type – Current Month or Quarter
- 2.1 Starts by Submarket and by Dwelling Type – Year-to-Date

## METHODOLOGY

### Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

### Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

## STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

## DWELLING TYPES:

A “**Single-Detached**” dwelling (also referred to as “**Single**”) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A “**Semi-Detached (Double)**” dwelling (also referred to as “**Semi**”) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A “**Row (Townhouse)**” dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term “**Apartment and other**” includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

## INTENDED MARKET:

The “**intended market**” is the tenure in which the unit is being marketed. This includes the following categories:

**Freehold:** A residence where the owner owns the dwelling and lot outright.

**Condominium (including Strata-Titled):** An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

**Rental:** Dwelling constructed for rental purposes regardless of who finances the structure.

## GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A “**Rural**” area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

## CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
