New Home Market

Housing Starts Maintain Brisk Pace in June

Housing starts in Greater Edmonton continued at a robust pace in June, with activity levels up on a year-overyear basis for the twelfth month in succession. Total starts in the Edmonton Census Metropolitan Area (CMA) totalled 951 units in

June compared with 450 units in June 2009. At mid-year, total starts have amounted to 5,379 units compared with 1,912 total starts during January to June of last year.

Single-detached starts reached 635 units in June, representing a sizable gain from the 268 units started in June 2009. For the year-to-date, builders have started 3,189 single-detached units compared with 1,117 units

reported in the first six months of 2009. This represents the best first half performance since 2007 when the region's builders started 4,266 singles by mid-year. As a result, single-detached homes under construction climbed to 3,985 units in June, the highest level since May 2008.

Single-detached completions increased by 62 per cent year-over-year in June to 432 units. Despite this uptick, standing inventories remain relatively low. Absorptions in June totalled 424 units, representing a 30 per cent improvement over the same month in 2009. With absorptions coming close to completions in June, inventories increased only marginally from the previous month and were down 41 per cent from a year prior. The average price for single-detached units absorbed in June fell by 8.5 per cent year-over-year to \$478,150. On a yearto-date basis, average absorbed prices have decreased by 15 per cent from the first half of 2009.

Multiple unit starts, which consist of semi-detached, row, and apartment units, totalled 316 units in June, an

increase of 74 per cent from the 182 units started in June 2009. Apartment starts increased to 99 units in June compared with zero starts in the same month last year. Meanwhile, semi-detached and row unit starts increased year-over-year by 18 and 21 per cent, respectively.

The majority of June's multiple unit starts were destined for either the homeowner or condominium markets, with only six units intended for the rental market. Multiple starts Metro-wide have reached 2,190 units so far in 2010 compared with 795 multiple units started during the first six months of last year. Of this year's multiple starts, less than eight per cent (170 units) have been targeted specifically for the rental market.

Multi-unit completions totalled 598 units in June compared with 508 units recorded in the same month last year. Meanwhile, absorptions improved by 24 per cent year-over-year to 480 units. With completions outpacing absorptions for the second month in a row, inventories again moved upward month-over-month. Multiple

unit inventories in June stood at 1,004 units, representing a 13 per cent increase over June 2009. The number of completed and unoccupied apartments, at 762 units, has risen to the highest level since January of this year and should move lower before further gains in production are warranted. Absorptions for the first half of 2010 were on par with this time last year, which translates into an average of 345 units per month.

Resale Market

Conditions Soften in the 2nd Quarter

Residential sales in the Alberta Capital Region as reported by the Realtors® Association of Edmonton (RAE) decreased by 19 per cent year-over-year during the second quarter to 5,329 units. This follows a relatively brisk first quarter when residential MLS® sales increased by 22 per cent over the first three months of 2009. So far this year, total residential sales have decreased by 5.5 per cent from the first half of 2009, although much of the reductions occurred in May and June.

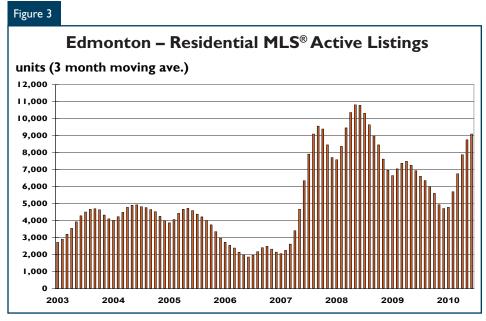

At the end of the first quarter, market conditions across Metro were largely balanced with the sales-to-active listings ratio in March sitting at 23 per cent. During the second quarter, however, slowing sales and an 18 per cent year-over-year rise in new listings caused the market balance to tip more in the buyer's favour. Active listings in June stood at 9,406 units, a 39 per cent increase over the same month last year and representing the highest level since August 2008. Meanwhile, the unadjusted sales-to-active listings ratio stood at 16 per cent in June, a level normally associated with buyer's market conditions.

Despite the shift in market balance in recent months, overall average prices continue to register modest gains over 2009 levels. The average MLS® residential price rose by two per cent year-over-year in June to \$335,271. For the year-to-date, the average sale price advanced by 4.7 per cent to \$333,987 due to a moderate transfer in the sales mix toward higher-priced units.

Economy

Labour Market Remains Soft

Improvements in Edmonton's labour market have been slow to arrive in 2010 despite evidence at the provincial level that conditions are firming up. The seasonally adjusted unemployment rate across Metro stood at 7.1 per cent in June, up from 6.7 per cent this time last year but slightly better than the 7.3 per cent level reported at the end of the first quarter. Average employment numbers remain down on a year-todate basis but have recently shown improvements (both seasonally adjusted and actual) on a monthover-month basis. Similar to what was reported at the end of the first quarter, the high unemployment rates continue to hold back wage gains.

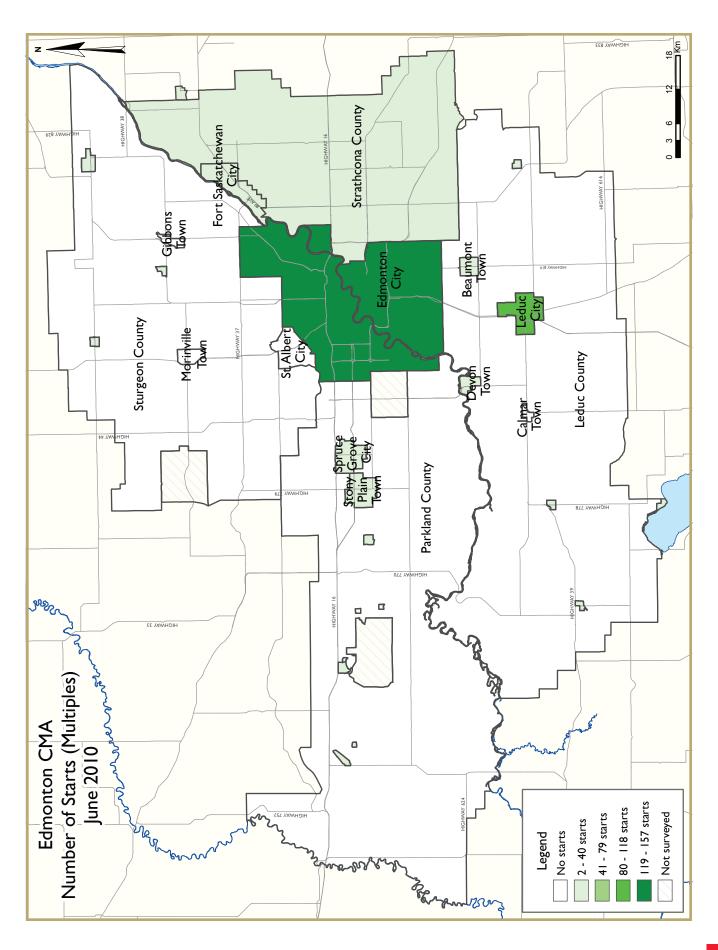

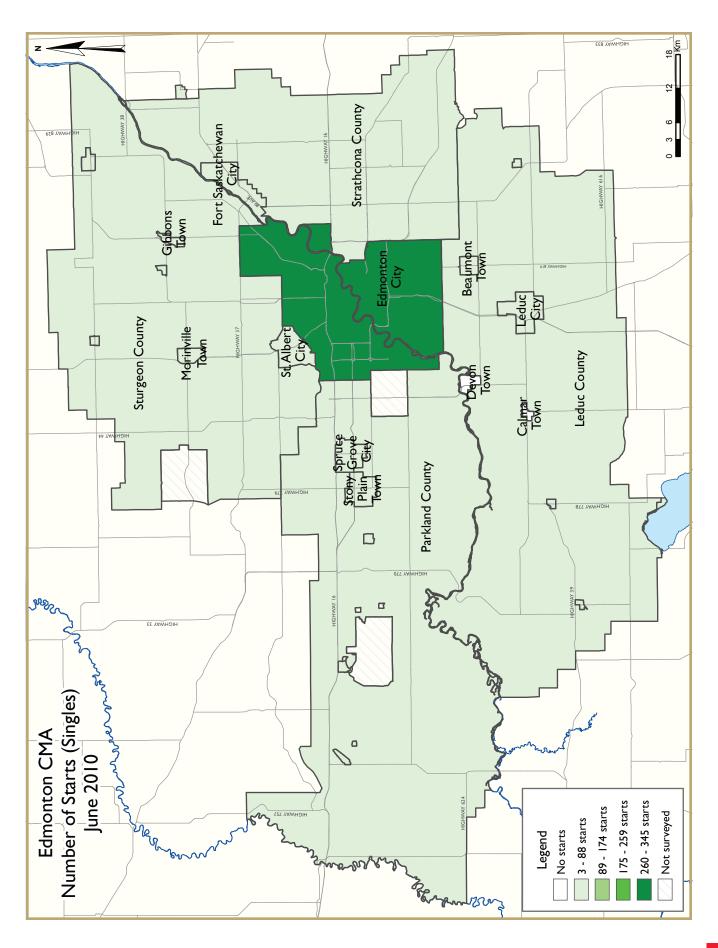

Source: RAE

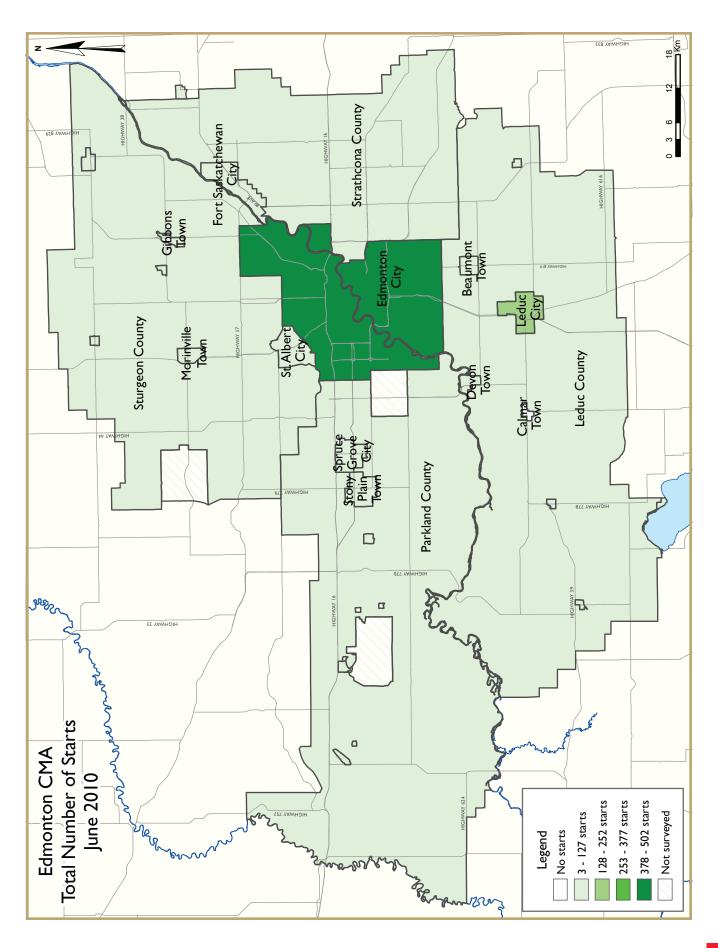

Statistics Canada's Average Weekly Earnings data showed a modest gain of 0.4 per cent on average in the first half of 2010, compared with a 5.4 per cent average increase in Edmonton during January to June of last year.

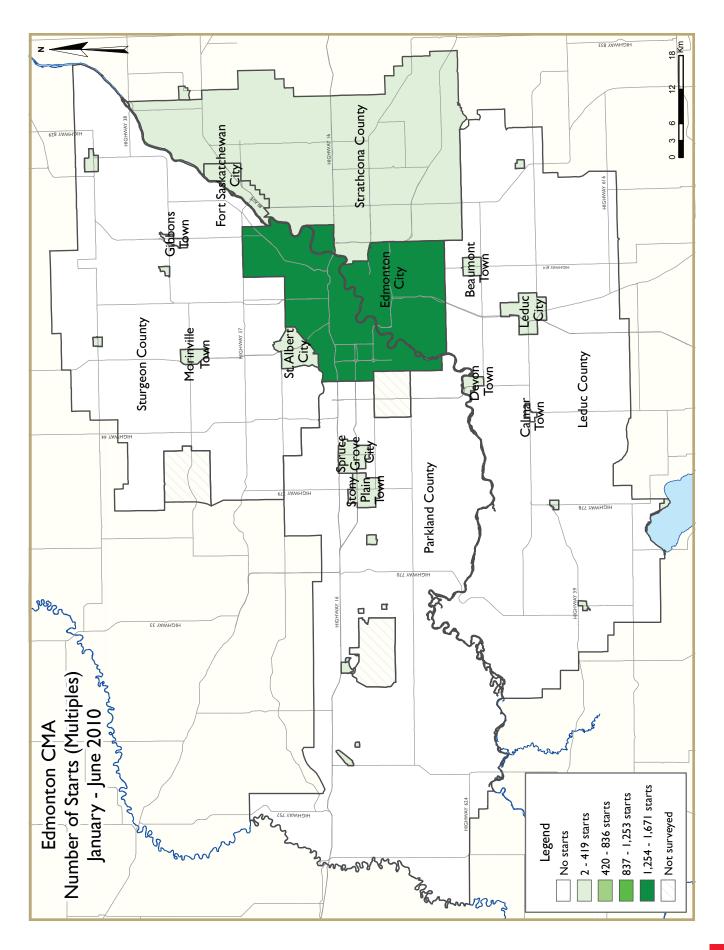

Alberta's population continued to grow during the first quarter but at a rate considerably slower than the previous period in 2009. The main reason for the reduction in the growth rate was moderation in newcomers from the rest of Canada. According to Statistics Canada quarterly estimates, Alberta's population grew in the first three months of 2010 by 1.6 per cent

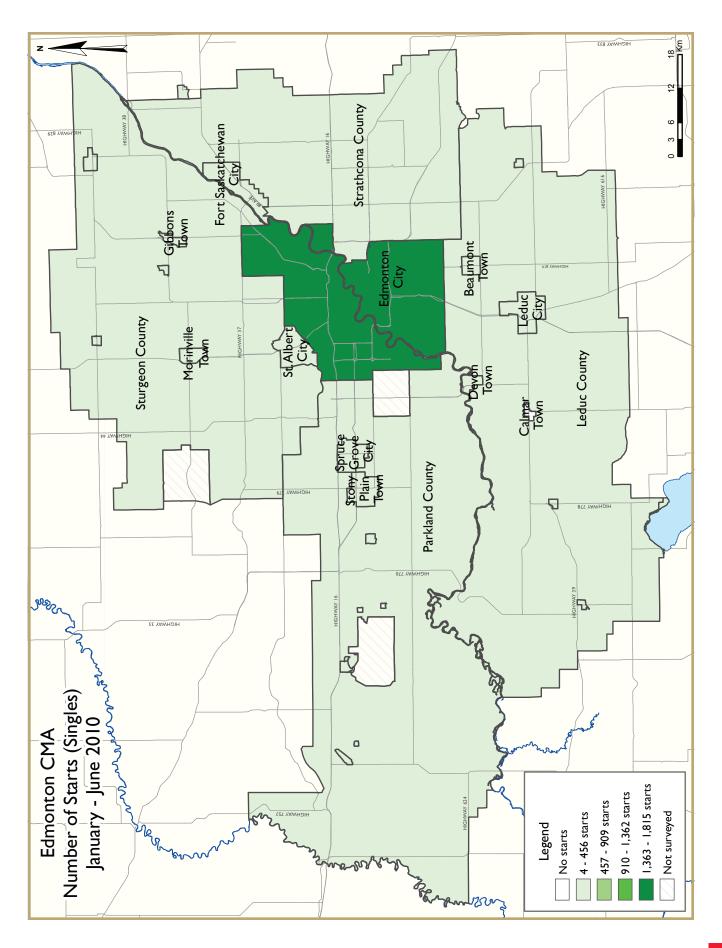

from the first quarter of last year. This compares with a growth rate of 2.8 per cent a year prior and the lowest annual gain in almost 14 years. After two quarters of net losses, the province attracted a net inflow of 312 interprovincial migrants during January to March of this year. However, this compares with a 7,144 net gain reported in the first three months of 2009 over the first quarter of 2008. International migration remained strong, however, with 6,758 immigrants reported in the first quarter compared with 5,279 newcomers arriving this time last year.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada's 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
