Quebec Region

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: First quarter 2010

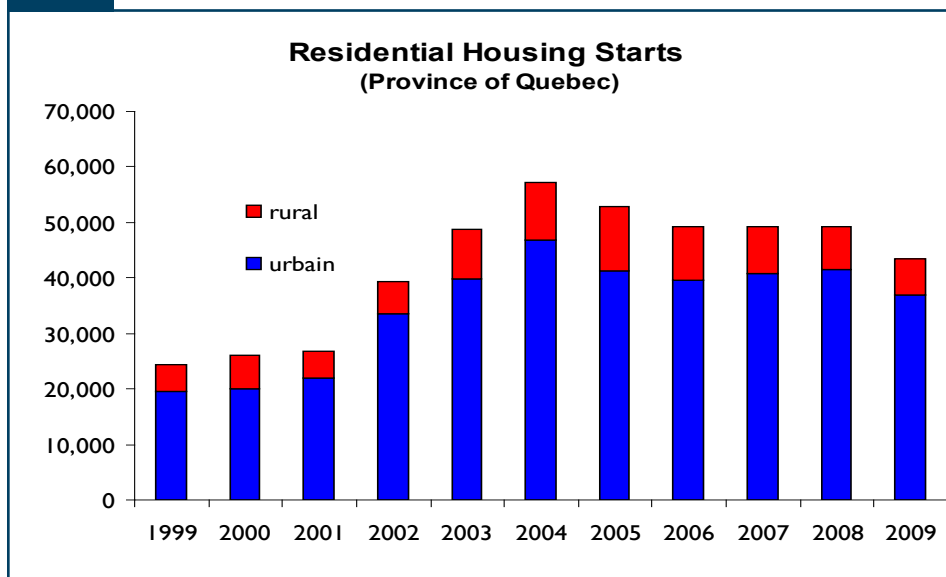

Housing starts up slightly in the fourth quarter

According to the latest starts survey conducted by Canada Mortgage and Housing Corporation (CMHC), 12,855 dwellings were started in Quebec during the fourth quarter of 2009, compared to 12,730 in the same period in 2008; activity therefore

remained relatively stable (+1 per cent), much like in the third quarter.

On a seasonally adjusted basis, the pace of residential construction was almost maintained in the fourth quarter (-0.5 per cent), which contrasts with the acceleration observed in the previous quarter (+15 per cent). While, overall, the pace remained unchanged, such was not the case for the main market segments,

as starts rates climbed by 9 per cent for single-detached houses but fell significantly for multiple-unit housing (-6 per cent). The rise in single-detached home starts was comparable to the increase registered in the previous quarter, while the decline in the multiple-family housing segment marked a turnaround from the hike of nearly 20 per cent recorded from July to September 2009.

Total annual starts as at December 31 therefore reached 43,403 units, down by 9 per cent from the corresponding result for 2008 (47,901 starts) and almost exactly the same number as we had predicted in our forecasts for this period, released more than a year ago. Even though residential construction in Quebec did not escape the recession, the repercussions will have been less significant than in the other large Canadian provinces.

Rural starts surge

In the province's urban centres (with 10,000 or more inhabitants), a small drop was recorded, as fourth-quarter starts fell from 11,127 units in 2008 to 10,841 in 2009 (-3 per cent). This decline in urban starts observed in the last quarter of 2009 was attributable to row homes and apartments, which together registered a decrease of 7 per cent from the same period a year earlier. Contrary to the results for the two previous quarters, housing starts in Quebec's rural centres increased significantly in the fourth quarter over the same period the year before, reaching 2,014 units (+26 per cent). For the year overall, urban starts were down by 12 per cent, while rural starts were up marginally (+1 per cent).

A breakdown of the fourth-quarter results by tenure category reveals

certain noteworthy differences, as starts of freehold homes and condominiums rose by 2 per cent and 9 per cent, respectively, while new rental units fell by 19 per cent. For the year, decreases in activity were recorded in all intended markets, with starts dropping by 10 per cent in the case of freehold houses, by 5 per cent for condominiums and by 24 per cent for rental housing units. The recent popularity of affordable homes was reflected in the starts levels. As for rental housing, the greater decline in starts in this segment was due to the notable slowdown in the construction of retirement homes, with the supply of such units already high.

Construction in the CMAs shows mixed results

In the first and second quarters of 2009, starts fell in Quebec's six major urban centres while, in the third quarter, the survey revealed mixed results. In the last quarter of 2009, the picture was similar to that observed in the previous quarter, as starts posted gains in the census metropolitan areas (CMAs) of Montréal (+8 per cent), Québec (+12 per cent) and Saguenay (+7 per cent) but declined in Gatineau (-24 per cent), Sherbrooke (-37 per cent) and Trois-Rivières (-3 per cent), compared to the same period in 2008. In all, foundations were laid for 9,024 housing units in the fourth quarter, or just 2 per cent more than the volume recorded in the same quarter a year earlier (8,886 units). Single-detached and multiple-unit housing starts decreased in half of the CMAs.

The differences observed among the regions were due to the dissimilar economic conditions and the local particularities of the resale markets.

As was the case in the third quarter, Québec was the CMA where the level of construction rose the most significantly during the period from October to December 2009, as 1,600 starts were enumerated in this area, compared to 1,428 a year earlier. This increase was attributable to a considerable rise in the multi-unit housing segment, particularly in the apartment category, where the starts volume jumped up by 20 per cent over the fourth quarter of 2008. It should be added that this hike in new apartments resulted from gains in both the rental and condominium housing segments.

The Montréal area also registered a year-over-year increase in the fourth quarter (+8 per cent). With the exception of row homes, for which starts fell by half, all market segments posted significantly higher levels than in the same period a year earlier. The growth in the apartment category was attributable to the increase in new condominiums. For the year overall, however, residential construction in the Montréal metropolitan area was down by 12 per cent from 2008.

The Gatineau area registered another definite decrease in activity (-25 per cent) in the fourth quarter. In all, 739 new units got under way in the Quebec part of the Ottawa-Gatineau CMA during this period in 2009, or 242 fewer than in the same period the year before. Contrary to the results recorded in the previous quarter, the decline observed during this past quarter extended to all market segments.

In the Sherbrooke CMA, foundations were laid for 379 dwellings in the last quarter of 2009, compared to 602 a year earlier. This 37-per-cent decline resulted from decreases in the apartment and single-detached

housing segments. However, thanks to the results registered in the previous quarters, starts in this CMA dropped by only 3 per cent in 2009. A breakdown of the results indicates that housing activity was geared to affordable housing, as single-detached home starts fell, while new semi-detached and row housing units rose.

Different story in the larger agglomerations

In agglomerations with 50,000 to 99,999 inhabitants, construction got under way on 676 dwellings in the fourth quarter of 2009, compared to 550 a year earlier. Overall, the latest quarterly survey revealed a very different picture than in the CMAs, with a 4-per-cent decline in single-detached home starts and a 60-per-cent drop in multi-unit housing activity. In the single-detached housing segment, almost all larger centres registered decreases, with the greatest average percentage decline having been recorded in the agglomeration of Shawinigan (-27 per cent). Only the agglomeration of Drummondville posted a gain in starts of this type. In the case of row homes and apartments, the agglomeration of Granby stood out with considerable decreases in activity. It should be specified, however, that the levels registered this past quarter were compared with exceptional results in 2008 (especially for multi-family housing). As for semi-detached home building, the results revealed a notable increase in the agglomeration of Drummondville.

Smaller agglomerations post small gain

Still in the fourth quarter, activity rose moderately in centres with 10,000 to 49,999 inhabitants. Foundations were laid for 1,267 dwellings in these smaller areas during this quarter, or about 2 per cent more than in the same period the year before. The overall increase reflected the situation for both single-detached houses (+2 per cent) and multi-family dwellings (+1 per cent). In the multiple-unit housing segment, the gain concealed a decline in apartment construction and a rise in semi-detached and row home building. Around 50 per cent of the centres with 10,000 to 49,999 inhabitants saw their starts volumes increase in the fourth quarter of 2009.

In line with the annual results for the province overall, the starts level recorded for the smaller agglomerations was 12 per cent below the 2008 total.

Resale market: sales soar and average MLS® price rises

According to data from the Canadian Real Estate Association (CREA), 18,202 existing homes were sold through the Multiple Listing Service (MLS)® during the last quarter of 2009, for a jump of 37 per cent over the corresponding period in 2008. This hike was well above the increases in transactions recorded in the first

three quarters of 2009. Following a 21-per-cent rise in October, the pace picked up even more in November and December. The seasonally adjusted rate of MLS® sales, for its part, posted a gain of about 9 per cent in the fourth quarter, after having registered increases of 6 per cent in the third quarter and 20 per cent in the second.

The gain recorded this past quarter brought the annual total to 79,290 sales in 2009, up by 3 per cent over the 76,762 transactions registered in 2008. The rebound observed on Quebec's resale market in 2009 resulted from a combination of two factors: first, there was some catching up—supported by the low interest rates—in relation to the low levels of activity recorded in second half of 2008 and, second, a number of purchases were moved up on account of the anticipated increase in mortgage interest rates during the second half of 2010.

The growth in the supply on the resale market slowed down again in the fourth quarter. In fact, new MLS® listings decreased by 7 per cent year-over-year, falling from 31,399 units in the last quarter of 2008 to 29,316 a year later. Given the opposite trends in sales and listings, the average MLS® price rose by 7 per cent during the fourth quarter of 2009, reaching \$235,227. However, it should be specified that, on a seasonally adjusted basis, the growth in the average price was nil this past quarter, which is comparable to the changes observed in the first and third quarters of the year. The strong increase registered in

the second quarter (+7 per cent) will therefore have resulted in a rise of 4 per cent in the average price between 2008 and 2009.

Economy showing signs of recovery

After declining by 1.4 per cent in the first quarter and by 0.4 per cent in the second, the gross domestic product at market prices grew by 0.2 per cent in the third quarter of 2009. For the first three quarters of the year, Quebec's GDP was down by 2.1 per cent, compared to the first nine months of 2008, while Canada's GDP contracted by 2.9 per cent. The latest compilation by the Institut de la statistique du Québec (ISQ) revealed that this last result was due to the growth in domestic demand, particularly investment in fixed capital.

On the labour market, the seasonally adjusted rate of jobs in Quebec fell slightly from the third quarter of the

year. For 2009 overall, the decline in employment will have reached 1 per cent compared to 2008. Losses were recorded in both full-time and part-time jobs. In the last quarter of 2009, the unemployment rate, for its part, rose by 0.7 of a percentage point to 7.7 per cent. However, Quebec's unemployment has remained below Ontario's rate (8.3 per cent), since the second quarter of the year.

As a result of improving global and national economic conditions, Quebec's economy, which had been contracting since the end of 2008, ended the year in recovery mode. Domestic consumption is already showing signs of recovery, while fiscal and monetary policy will continue to stimulate the economy. CMHC therefore expects the Quebec economy to grow by 2 per cent in 2010. Still, companies will be slow to hire, such that the province's labour market will grow at a slower rate. Job growth of less than 1 per cent is expected in 2010.

Net migration up significantly in the third quarter

According to the latest Statistics Canada data, net migration increased by 30 per cent in the third quarter of 2009. This result was due to both a rise in net international migration and a reduction in the interprovincial deficit. For the first three quarters of 2009, net migration showed a gain of 24 per cent over the same period in 2008.

The rise in Quebec's net migration in 2009 was due to two factors: the measures put in place to reach the provincial government's immigration target (55,000 newcomers in 2010) and the relatively more attractive labour market in Quebec, which will have retained a greater number of workers.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A “**dwelling unit**”, for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A “**start**”, for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units “**under construction**” as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A “**completion**”, for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term “**absorbed**” means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A **“Single-Detached”** dwelling (also referred to as **“Single”**) is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A **“Semi-Detached (Double)”** dwelling (also referred to as **“Semi”**) is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A **“Row (Townhouse)”** dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term **“Apartment and other”** includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The **“intended market”** is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A **“Rural”** area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada’s 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada’s 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
