HOUSING MARKET INFORMATION

HOUSING NOW Quebec Region

Date Released: Fourth Quarter 2010

Third quarter housing starts

According to the latest housing starts survey conducted by Canada Mortgage and housing Corporation (CMHC) 13,423 dwellings were started in Quebec in the third quarter of 2010, compared to 12,046 at the same time last year. This rise (11 per cent) is much more modest than

that observed during the two first quarters of 2010 (31 per cent and 37 per cent respectively). Year-to-date housing starts as of October 31st now amounts to 38,390 and indicates a gain of approximately 26 per cent from the corresponding result in 2009 (30,548). The seasonally adjusted annualized rate for this same quarter (50,300) represents a slower pace than that of the second quarter (54,300).

Another strong quarter for rural housing starts

In the third quarter of 210, the number of homes in Quebec rural areas for which construction had begun went up by 52 per cent compared to the same period last year, ending up at 2,608 starts.

In the province's urban centres (with 10,000 population and over), a small rise was recorded, as housing starts went from 10,328 in 2009 to 10,815 in 2010 (+ 5 per cent). The increase in housing starts observed in urban centres in the third quarter is entirely attributable to the apartment segment, for which the number of housing starts jumped from 5,467 to 6,341 in the space of one year (+16 per cent). Single-family, semi-detached, and row houses recorded declines of 7, 6, and 22 per cent respectively. CMHC's latest survey also indicates that housing starts in centres of 10,000 population and over were on the rise in the condominium and rental housing segments. Starts aimed at the condominium sub-market recorded the highest increase (+25 per cent).

Small increase in CMA starts

In contrast to the first two quarters, when activity was increasing in al of Quebec's large urban centres, housing starts went up in only half of the province's census metropolitan areas (CMA). In total, the foundations of 8,767 dwellings were poured in the third quarter, a increase of 3 per cent compared to a year ago (8,497).

The Trois-Rivières area is where the pace of construction went up the most between the third quarter of 2009 and the third quarter of 2010 (53 per cent). A total of 409 new homes were recorded, compared to 268 a year ago. This hike is attributable to the apartment segment, for which

the quarterly total more than doubled.

A similar situation prevailed in the Saguenay region, where the increase of apartment housing starts contributed to an overall gain of 28 per cent. The only other CMA to record a higher level of starts was the Montréal CMA, thanks to the strength of condominium starts. This tenure type will have been, without a doubt, the star product of this region. However, the decrease in single-detached starts (-15 per cent) limited Montréal's quarterly growth to 6 per cent.

The Sherbrooke CMA saw a reversal of conditions from last quarter: the foundations of 408 new homes were poured during the third quarter of 2010, compared to 452 a year ago (-10 per cent). While growth in the first and second quarters stemmed from the multi-family segment, a nearly generalized drop was observed last quarter.

In the Québec region, gains in the semi-detached and row categories were not enough to compensate for declines in single-detached (-13 per cent) and apartments (-6 per cent). In total, the CMA posted a 4 per cent drop compared to the third quarter last year. Nonetheless, robust demand in this region during the course of 2010 fuelled a 24 per cent year-to-date increase (4,863 housing starts from January to September 2010).

During the third quarter, new residential starts were also less numerous in the Quebec part of the Ottawa-Gatineau CMA. A 14 per cent decrease in housing starts was observed in this region for the months of July to September 2010 (810 in 2010 compared to 936 in 2009). This result translates the situation in all of the region's sub-markets.

After three quarters of activity, The

Gatineau region is still the only centre for which a decrease in housing starts is observed. The decline there is measured at 10 per cent. Rises are thus recorded in all other centres with 10,000 population and over. The more pronounced gains are seen in Trois-Rivières (over 94 per cent) and Saguenay (+57 per cent), followed by the Québec CMA with 24 per cent, Montréal (+21 per cent) and Sherbrooke (15 per cent).

Construction drops in large agglomerations

In agglomerations with population between 50,000 to 99,999, 602 new homes were started in the third quarter of 2010, compared to 676 a year ago (-11 per cent). In contrast to the second quarter, when all agglomerations of this size saw a boost in construction activity, the third quarter was a period almost generalized decline.

The Granby census agglomeration (CA) is the only such centre to post an increase in housing starts in the third quarter. Starts there, however, recorded a significant gain, moving up from 231 to 289 from one year to another. This result is explained by strong apartment starts.

In the Drummondville agglomeration, construction came down by 11 per cent in the space of a year (129 in 2010 compared to 145 in 2009). A similar reduction was recorded in the Shawinigan agglomeration (-12 per cent) as a result of a decline in apartment starts.

In the Saint-Jean-sur-Richelieu and Saint-Hyacinthe agglomerations, losses were respectively 48 per cent and 44 per cent. In both of these cases, the decrease is explained by a lower number of apartments started (see table 2 on page 7). After nine months,

housing starts in CAs were up by 25 per cent. Analysis of results by market segment shows that row homes were the only category where activity is lower.

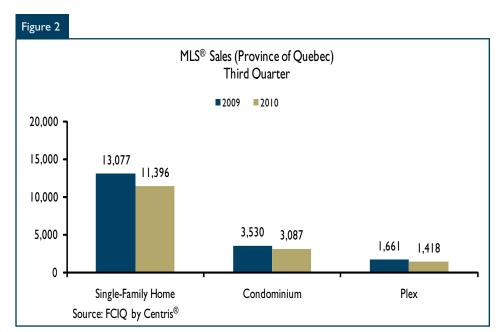

Higher level of activity in the majority of small agglomerations

Whereas activity was down in larger agglomerations, centres with population between 10,000 and 49,999 saw total housing starts rising in the third quarter of 2010. Indeed, the foundations of 1,446 new homes were poured during this period, a result that is up by 25 per cent from last year. The increase of activity amounted to 14 per cent in the single-detached segment, 19 per cent for semi-detached homes and close to 50 per cent in the case of apartments.

A more moderate increase in the third quarter will have nonetheless reduced the year-to-date gain, which is now estimated at 43 per cent.

Decrease in third quarter MLS® sales

According to data released by the Canadian Real Estate Association (CREA), 16,005 MLS® sales were made in the third quarter of 2010, a 13 per cent reduction from the amount recorded at the same time last year. As was the case in the second quarter, the pace of sales signals another slowing of activity on the resale market in Quebec. However, according to seasonally adjusted data, the slowdown was less pronounced than that observed in the second quarter. Indeed, according to CREA, the quarterly sales rate is down by 4 per cent in the third quarter, compared to 14.5 per cent in the second quarter of 2010.

According to the Fédération des chambres immobilières du Québec (FCIQ), this moderation in pace is observed in all market segments: sales in the ownership and condominium market segments were each down by 13 per cent, while sales of rental buildings declined by 15 per cent when compared to the third quarter of 2009.

On the supply side, the number of new listings increased for a third consecutive quarter, recording a 3 per cent rise compared to the third quarter of 2009. The drop in sales and rise in new listings are indicative of easing on this market.

In the third quarter of 2010, active listings went up slightly (2 per cent) in Quebec, the first increase since the second quarter of 2009. This movement reduced MLS® price pressure, which came in at 6.6 per cent compared to the third quarter of 2009 (\$252,029). In addition, the seasonally adjusted MLS® price declined by approximately I per cent from the previous quarter of this year.

Growth of real GDP in second quarter

According to the latest quarterly economic accounts produced by Statistics Canada, real gross domestic product in Quebec recorded a 0.5 per cent growth in the second quarter of 2010 compared to the first quarter (2 per cent annualized level). A closer look at the results shows that this slower growth is attributable to weakness in domestic demand as well as to external trade. As for domestic demand, a drop in spending is recorded. Private investment and public spending post increases in the second quarter. This latest increase. albeit more moderate, follows the trend of economic recovery observed since the end of 2009.

Mirroring GPD growth, employment also saw less robust growth during the third quarter of 2010. In fact, the seasonally adjusted number of jobs was up by 0.4 per cent from the second quarter. During the second quarter, growth was estimated at 1.3 per cent.

Slower employment growth in

the third quarter did not stop the unemployment rate to resume it's decline. Measured at 7.7 per cent in September, the unemployment rate in Quebec came down marginally from the previous quarter (7.8 per cent), remaining under the 8 per cent level, which it achieved during the first quarter. However, as was mentioned, this latest reduction is modest.

Slight decline in net migration

According to the latest population estimates of Statistics Canada (second quarter of 2010), total net migration in Quebec regressed slightly in the second quarter of 2010. On the one hand, net interprovincial migration was up once again, as a result of a relatively favourable economic context. The deficit in the second quarter thus went down by 500 migrants. On the other hand net international migration declined by 900 migrants: whereas the number of immigrants increased (+572 migrants) compared to the same period last year, the number of non-permanent residents went down notably (-1,433 non-permanent residents). In total, total net migration decreased by approximately 400 persons when compared to the same quarter in 2009.

Rental Market Survey: conditions still stable across Quebec

As we await the results of the next rental market survey, it is useful to recall the highlights of the spring 2010 survey. According to the Rental Market Survey conducted in the spring by Canada Mortgage and Housing Corporation (CMHC), the

average vacancy rate in privately initiated structures with three or more housing units in Quebec's urban centres (with 10,000 or more inhabitants) reached 2.5 per cent in April, up by 0.2 of a percentage point over a year earlier. The picture of the market according to apartment size was fairly uniform across the province and had not changed since the last three spring surveys, as the market was still tighter in the case of larger apartments. In fact, the vacancy rates were significantly lower for two-bedroom and three-bedroom apartments (2.2 per cent and 2.0 per cent, respectively) than for bachelor units (4.8 per cent). The estimated change in the average rent in existing structures was more modest, with an increase of 2.2 per cent over 2009. And, the availability rate also rose compared to last spring.

Seniors' Housing Survey: vacancy rate rises slightly in Ouebec

The results of the next retirement home survey will be available in 2011. The following is a synopsis of the latest available results: According to the latest annual Seniors' Housing Survey conducted by Canada Mortgage and Housing Corporation (CMHC), the vacancy rate for standard spaces—spaces for persons requiring less than one and a half hours of medical care per day changed little over the past year in the province of Quebec, having reached 8.4 per cent in February 2010, versus 7.9 per cent at the same time in 2009. The results varied, however, from one census metropolitan area (CMA) to another in Quebec. This

change in the overall rate resulted from softer conditions in the private room segment. In fact, the vacancy rate for units of this type attained 10.1 per cent this year, compared to 8.9 per cent in 2009. In the apartment segment, the vacancy rates remained relatively stable. In 2010, the proportions of unoccupied units reached 8.5 per cent for bachelor apartments and 7 per cent in the case of apartments with one or more bedrooms.

[&]quot;NHPI" means New Housing Price Index

[&]quot;CPI" means Consumer Price Index

[&]quot;SA" means Seasonally Adjusted

⁽I) Growth year over year expressed in percentage

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2006 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modelled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "dwelling unit", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "start", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "under construction" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "completion", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "absorbed" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "Single-Detached" dwelling (also referred to as "Single") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "Semi-Detached (Double)" dwelling (also referred to as "Semi") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "Row (Townhouse)" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "Apartment and other" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "intended market" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "Rural" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions, except the Economic Indicators data (Table 6) which is based on Statistics Canada's 2001 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
