HOUSING MARKET INFORMATION

RENTAL MARKET REPORT

Ottawa¹

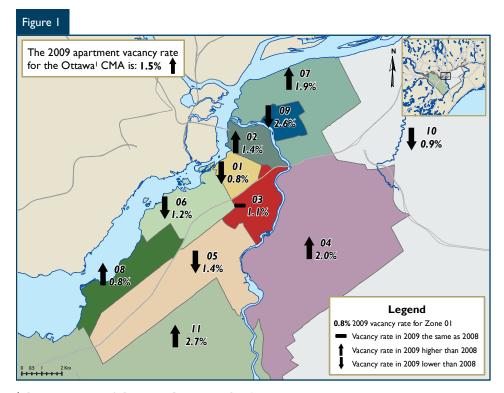

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Fall 2009

Highlights

- Ottawa's vacancy rate for private rental apartments increased to 1.5 per cent in October 2009, up slightly from 1.4 per cent last year.
- The fixed sample average rent for a two-bedroom apartment grew by 2.9 per cent from last year's average.
- Ottawa CMA Rental Market will tighten in 2010 as a stable labour market will attract more migrants.

Market Overview

According to the latest Rental Market Survey data collected in October by CMHC, the average vacancy rate in privately initiated rental apartments in the Ottawa Census Metropolitan Area (CMA) increased only slightly from last year to 1.5 per cent. Consequently, Ottawa remained one of the tightest rental markets in Ontario.

The low vacancy rate was the result of two contrary influences. On the one hand low borrowing costs coupled with steady employment conditions in the Capital City gave many renters the right incentives to jump into the homeownership market pushing the vacancy upwards. On the other hand minimal rental apartment construction and fewer secondary rental market units kept vacancies low. While both influences roughly balanced each other out, the outflow of households from rental accommodations into homeownership was relatively stronger.

Availability Rate Increased Substantially

Availability rate is a slightly broader indicator than the vacancy rate, as it

captures both the currently vacant rental stock and the stock for which the tenant has given or received notice to vacate. While the vacancy rate remained largely stable at a low of 1.5 per cent, the availability rate jumped from 2.9 per cent in 2008 to 3.5 per cent in 2009.

This suggests that it is possible that some buyers, who are currently renting, have not taken occupancy of their new homes yet, but have already given their landlords their two months notice. The slight jump in availability could also indicate that in Ottawa's tight rental market, leased units are occupied quite rapidly after they become vacant, maintaining a stable vacancy rate.

Rental Demand Factors

Employment Conditions Ease Pressure on Vacancy Rates

Employment performance among first time buyers' ages 25 to 44 years old has been very resilient, remaining on par with levels this time last year. Labour market recovery for this age cohort has been remarkable

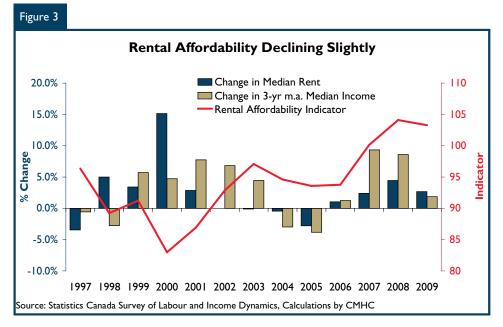

and has enabled some potential first time buyers to take full advantage of declining borrowing costs. An economic environment of low interest rates unleashed the pent-up demand accumulated early in 2009. As a result, the movement out of rental and into homeownership in this age group has been significant, pushing vacancy rates upwards.

Another factor supporting the increase in vacancy rate is the weak employment performance among young renters. The age cohort between ages 18 to 24 has been the weakest when compared to other age groups. Total year-to-date full time employment is down 8.7 per cent from last year. Rising unemployment within this age group has obliged some young adults to remain in their parental home, dampening the rate of household formation.

Affordability Improved Since 2006

The rental affordability indicator estimates how affordable a rental market is for those households in that market. Affordability is attained when a household spends 30 per cent of its gross income on housing; at this point the indicator would have a value of 100. As the indicator increases, the market becomes more affordable; as the indicator declines, the market becomes less affordable.

The rental affordability indicator for the Ottawa CMA stood at 103, a slight decline from last year's value of 104. According to CMHC's Rental Market Survey, the cost of renting a median price two-bedroom apartment increased by 2.6 per cent in 2009, while the median income of renter households grew by 1.8 per cent.

However, the rental market in the Capital City remains very affordable, as the aforementioned income has increased by 21 per cent since 2006 while rents have grown by only 10 per cent. As a result, although the jump from rental into homeownership was significant, vacancy rates were practically unchanged from last year.

Flows From Rental Into **Condominium Apartments**

While strong rental demand due to robust and healthy employment growth was the main story in 2008, this year was characterized by slightly weakened labour markets and increasing flows from rental into homeownership.

These flows were particularly strong for condominium apartments, as first time home buyers find this type of dwelling a healthy starting point to jump from rental into homeownership. This year condominium apartment completions decreased only slightly when compared to 2008, almost reaching the 1,000 unit mark, exerting upward pressure on vacancy rates.

Economic Uncertainty Dampening Rental Demand

The fourth factor that released pressure on the Rental Market was global economic uncertainty. The current economic slowdown has prompted less travel among households from different parts of the world. As a result, Ottawa's yearly average of 6,000 new immigrants decreased. This decline in the number of immigrants moving into Ottawa, which typically rent for the first few years upon arrival, contributed to the rise in vacancy rates.

Rental Supply Factors

Apartment Supply Increased This Year

The total apartment universe in Ottawa increased by 0.7 per cent, representing the biggest growth in the rental stock in last 12 years. However this slightly growing universe released little pressure on Ottawa's tight rental market. As well, rental apartment starts and completions this year, up to October, provided little relief to the

rental market, with only 65 and 86 units respectively.

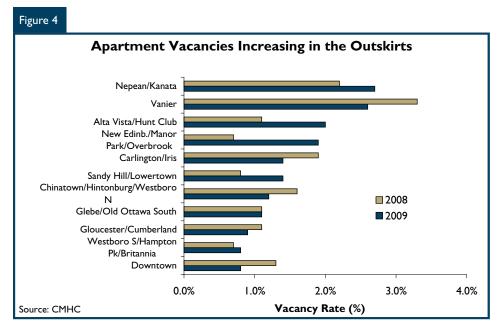

Fewer Secondary Rental Market Units for the Second Year in a Row

The total number of units in the Secondary Rental Market has been decreasing for the second year in a row, moderating by 3.7 per cent. Although Ottawa saw an additional 889 of the more demanded semidetached, row and duplex units, the other types of dwellings moved lower.

In particular, single-detached secondary market rentals posted a decline of 17 per cent from last year. Lower interest rates coupled with higher rents for this type of dwelling prompt many renters into the homeownership market.

Still, the estimated total of 34,118 units in the secondary market accommodates one third of renter households in the Capital of Canada, with the remainder living in purpose built rental apartments and townhomes and in rented condominium apartments.

Although rental condominium apartment only represent a small percentage of the total stock of condominium apartment units, this year they saw an increased of 3.4 per cent from last year for a total of 4,155 units, providing slightly more choice for young professionals and emptynesters willing to live closer to the downtown core.

Apartment Rental Market

Vacancies Remained Stable

Private apartment vacancy rates did not change significantly this October. Although smaller bachelor units experienced the tightest conditions, there were no significant changes in any of the bedroom types.

Two and three-bedroom units saw the highest vacancies at 1.7 per cent, as the bulk of the outflow from rental into homeownership was observed in these more expensive units. The competition of rental with homeownership put downward pressure on rents; as a result, these bedroom types post the lowest rent increases of 2.9 and 1.8 respectively.

Vacancies Moved Higher in the Outskirts

Although the vacancy rate in the Ottawa CMA inched up slightly to 1.5 per cent, the outskirts posted higher vacancies. In particular, Nepean/Kanata had the highest vacancy rate at 2.7 per cent this year and the

highest availability rate at 6.6 per cent. According to the latest data available, the median income for persons 15 year and older in Ottawa's outskirts is higher than in the regions inside the greenbelt. As a result, the jump into the homeownership market was more pronounced in regions such as Nepean/Kanata.

Rents Increased More in the Downtown Core

The growth in two bedroom apartment rents for fixed sample structures was lower than last year, at 2.9 per cent. This measure is based on structures that were common to the survey sample for both the 2008 and 2009 surveys. The rent increases were more pronounced in the Downtown core and in the Outskirts.

The Downtown core not only achieved the absolute highest rent but it also posted the second largest increase of areas inside the greenbelt. At the same time it saw a substantial tightening in vacancy rates and became one of the tightest zones.

Ottawa City's core is a well sought after area, as it provides easy access to amenities and work for tenants.

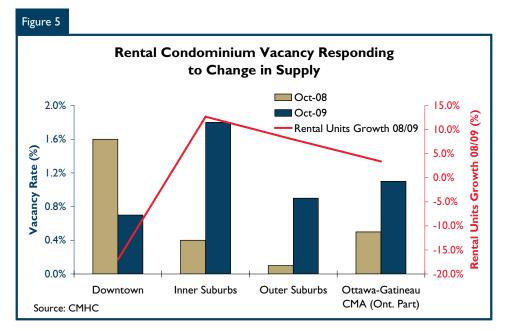

Vanier and Gloucester/Cumberland posted some of the highest increases in rent, with 5.1 and 4.8 per cent respectively. Nevertheless, rents in these areas remain well below the average rent for the Ottawa CMA.

Townhouse Rental Market

Vacancy Increased to 2.7 Per Cent

The townhome rental market which experienced substantially weaker rental demand, saw vacancy rates rise to 2.7 per cent this year, from 2.2 per cent last year. Although vacancy rates for the townhouse rental market recorded a higher jump than that of rental apartments, this rental market remains popular with a strong increase in rents. This type of dwelling is well liked amongst new families and new immigrants that tend to have bigger families. Given that the cost of renting a townhome is higher than renting a conventional apartment unit, this market segment was in more direct competition with homeownership.

Contrary to the overall trend across the Ottawa CMA, New Edinburgh, Manor Park and Overbrook saw a decline in vacancy rates to 1.1 per cent. It is not a surprise to see that this tight rental market posted the highest fixed sample rent increase inside the greenbelt. These well sought after areas are relatively close to the downtown area but post rents that are 12 per cent more affordable.

Condominium Apartment Rental Market

Vacancy Rate for Condominium Apartment Rentals Doubled

The average vacancy rate inched up to 1.1 per cent, from 0.5 per cent last year. One of the factors contributing to this increase was the 3.4 per cent growth in the rental condominium apartment universe. Almost twenty percent of all condominium apartments in Ottawa were rented out by individual investors, as units remain very popular amongst young professionals and empty-nesters seeking rental accommodation.

The second factor that contributed to an increase in the vacancy rate for this type of dwelling was the effect of historically low interest rates. The average rent for a condominium apartment of two or more bedrooms grew to be higher than the monthly mortgage payment¹ for an average

condominium apartment in the existing homeownership market. This effect was particularly felt in condominium apartments with two bedrooms that saw an increase of 8 per cent in average rent.

There was a considerable decline in the vacancy rate for the Downtown area. Although total condominium apartment completions decreased only slightly when compared to last year, the total number of condominium apartment units available for rent decreased by 17 per cent. Yet high popularity for dwellings closer to the Ottawa's core kept demand elevated and placed downward pressure on the Downtown vacancy rate.

2010 Rental Market Outlook

Next year several factors will exert downward pressure on the vacancy rate, pushing it to 1.2 per cent. Firstly, gradual economic recovery, particularly for the younger age cohort, will induce potential renters to re-enter Ottawa's rental market.

Secondly, improved activity coming from first time home buyers will moderate as interest rates and prices in the homeownership market gradually increase. As a result some tenants will decide to stay in rental accommodations longer.

Thirdly, as the economy continues to recover, in-migrants will be attracted to a stable, well-paid job market. Rising migration, attracted by the relative labour market resilience compared to other centers, will add to the total number of households in the Ottawa CMA, putting downward pressure on the vacancy rate.

Additionally, the gap between the rate of growth of median income for renter households and average rents will remain significant, resulting in an affordable rental market in the Capital of Canada.

Finally, the bulk of supply coming from purpose built rental units remains subdued. Although the rental condominium apartments might offer some relief and further choice for tenants, few purpose-built rental unit construction will apply additional downward pressure on the vacancy rate.

Expect rents for two-bedroom apartments to rise by 3.5 per cent next year; a stronger increase than this year's 2.9 per cent. This increase will be a result of a tighter rental market in the Capital region that will continue to exert pressure on rents.

Monthly payment with 5 per cent down payment, 25 year loan and 5 year fixed rate.

National Vacancy Rate Increased in October 2009

Winnipeg	1.0	1.1

The average rental apartment vacancy rate in Canada's 35 major centres increased to 2.8 per cent in October 2009 from 2.2 per cent in October 2008. The centres with the highest vacancy

Total

2.2

2.8

rates in 2009 were Windsor (13.0 per cent), Abbotsford (6.1 per cent), Peterborough (6.0 per cent), Calgary (5.3 per cent), and London (5.0 per cent). On the other hand, the major urban centres with the lowest vacancy rates were Regina (0.6 per cent), Québec (0.6 per cent), St. John's (0.9 per cent), Winnipeg (1.1 per cent), Kingston (1.3 per cent), and Victoria (1.4 per cent).

Demand for rental housing in Canada decreased due to slower growth in youth employment and improved affordability of homeownership options. Rental construction and competition from the condominium market also added upward pressure on vacancy rates.

The highest average monthly rents for two-bedroom apartments in new and existing structures were in Vancouver (\$1,169), Calgary (\$1,099), Toronto (\$1,096), and Ottawa (\$1,028). The lowest average monthly rents for two-bedroom apartments in new and existing structures were in Saguenay (\$518), Trois-Rivières (\$520), and Sherbrooke (\$553).

Year-over-year comparison of rents in new and existing structures can be slightly misleading because rents in newly-built structures tend to be higher than in existing buildings. However, by excluding new structures, we can get a better indication of actual rent increases paid by most tenants. The average rent for two-bedroom apartments in existing structures increased in all major centres. The largest rent increases in existing structures were recorded in Regina

(10.2 per cent), Saskatoon (8.3 per cent), Victoria (5.0 per cent), and St. John's (4.9 per cent). Overall, the average rent for two-bedroom apartments in existing structures across Canada's 35 major centres increased by 2.3 per cent between October 2008 and October 2009.

CMHC's October 2009 Rental Market Survey also covers condominium apartments offered for rent in Calgary, Edmonton, Montréal, Ottawa, Québec, Regina, Saskatoon, Toronto, Vancouver, and Victoria. In 2009, vacancy rates for rental condominium apartments were below two per cent in seven of the 10 centres surveyed. Rental condominium vacancy rates were the lowest in Toronto, Saskatoon, and Ottawa. However, Regina and Edmonton registered the highest vacancy rates for condominium apartments at 3.0 per cent and 3.1 per cent in 2009, respectively.

The survey showed that vacancy rates for rental condominium apartments in 2009 were lower than vacancy rates in the conventional rental market in Ottawa, Saskatoon, Vancouver, Toronto, Edmonton, and Calgary. The highest average monthly rents for two-bedroom condominium apartments were in Toronto (\$1,487), Vancouver (\$1,448), Calgary (\$1,310), and Victoria (\$1,223). All surveyed centres posted average monthly rents for two-bedroom condominium apartments that were higher than average monthly rents for two-bedroom private apartments in the conventional rental market in 2009.

¹ Major centres are based on Statistics Canada Census Metropolitan Areas (CMAs) with the exception of the Ottawa-Gatineau CMA which is treated as two centres for Rental Market Survey purposes and Charlottetown, which is a Census Agglomeration (CA).

TECHNICAL NOTE:

Difference between Percentage Change of Average Rents (Existing and New Structures) AND Percentage Change of Average Rents from Fixed Sample (Existing Structures Only):

Percentage Change of Average Rents (New and Existing Structures): The increase/decrease obtained from the calculation of percentage change of average rents between two years (example: \$500 in 2008 vs. \$550 in 2009 represents an increase of 10 percent) is impacted by changes in the composition of the rental universe (e.g. the inclusion of newly built luxury rental buildings in the survey, rental units renovated/upgraded or changing tenants could put upward pressure on average rents in comparison to the previous year) as well as by the rent level movement (e.g. increase/decrease in the level of rents that landlords charge their tenants).

Percentage Change of Average Rents from Fixed Sample (Existing Structures Only): This is a measure that estimates the rent level movement. The estimate is based on structures that were common to the survey sample for both the 2008 and 2009 Fall Rental Market Surveys. However, some composition effects still remain e.g. rental units renovated/upgraded or changing tenants because the survey does not collect data to such level of details.

METHODOLOGY FOR RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts the **Rental Market Survey** (RMS) every year in April and October to estimate the relative strengths in the rental market. The survey is conducted on a sample basis in all urban areas with populations of 10,000 and more. The survey targets only privately initiated structures with at least three rental units, which have been on the market for at least three months. The survey collects market rent, available and vacant unit data from sampled structures. Most RMS data contained in this publication refer to privately initiated apartment structures.

The survey is conducted by a combination of telephone interviews and site visits, and information is obtained from the owner, manager, or building superintendent. The survey is conducted during the first two weeks of April/October, and the results reflect market conditions at that time.

CMHC's Rental Market Survey provides a snapshot of vacancy and availability rates, and average rents in both new and existing structures. In October 2006, CMHC has introduced a new measure for the change in rent that is calculated based on existing structures only. This estimate is based on structures that were common to the survey sample the previous year and the current year of the Rental Market Survey. The change in rent in existing structures is an estimate of the change in rent that the landlords charge and removes compositional effects on the rent level movement due to new buildings, conversions, and survey sample rotation. The estimate of per cent change in rent is available in the Rental Market Report – Canada Highlights, Provincial Highlights, and the local Rental Market Reports. The rent levels in new and existing structures are also published. While the per cent change in rents in existing structures published in the reports are statistically significant, changes in rents that one might calculate based on rent levels in new and existing structures may or may not be statistically significant.

METHODOLOGY FOR SECONDARY RENTAL MARKET SURVEY

Canada Mortgage and Housing Corporation (CMHC) conducts a survey of the **Secondary Rental Market** (SRMS) in September and October to estimate the relative strengths in the secondary rental market which is defined as those dwellings not covered by the regular RMS. CMHC has identified the following dwelling components to be included in SRMS:

- Rented single-detached houses.
- Rented double (semi-detached) houses (i.e.. Two units of approximate equal size and under one roof that are situated either side-by-side or front-to-back).
- Rented freehold row/town homes.
- Rented duplex apartments (i.e., one-above-other).
- Rented accessory apartments (separate dwelling units that are located within the structure of another dwelling type).
- Rented condominiums (can be any dwelling type but are primarily apartments).
- One or two apartments which are part of a commercial or other type of structure.

The SRMS has three components which are conducted in selected CMAs:

- A Household Rent Survey of all households to collect information about rents.
- A Condominium Apartment Rent Survey of households living in condominium apartments to collect information about rents.
- A Condominium Apartment Vacancy Survey of condominium apartment owners to collect vacancy information.

All three surveys are conducted by telephone interviews. For the condominium apartment vacancy survey, information is obtained from the owner, manager, or building superintendent and can be supplemented by site visits if no telephone contact is made. For the other two surveys, information is collected from an adult living in the household. All surveys are conducted in September and October, and the results reflect market conditions at that time.

CMHC publishes the number of units rented and vacancy rates for the condominium vacancy survey. For the condominium rent and household rent surveys, the average rent is published. A letter code representing the statistical reliability (i.e., the coefficient of variation (CV)) for each estimate is provided to indicate the data reliability. In 2009, rented condominium apartments were surveyed in the following CMAs: Vancouver, Victoria, Calgary, Edmonton, Regina, Saskatoon, Toronto, Ottawa, Montréal and Québec (NOTE: condo rent data was not collected for Regina and Saskatoon). Other secondary rental market units were surveyed in Abbotsford, Barrie, Calgary, Edmonton, Halifax, Montreal, Ottawa, Quebec, St. John's, Toronto, Regina, Saskatoon, Kelowna, Vancouver and Victoria.

DEFINITIONS

Availability: A rental unit is considered available if the existing tenant has given, or has received, notice to move, and a new tenant has not signed a lease; or the unit is vacant (see definition of vacancy below).

Rent: The rent refers to the actual amount tenants pay for their unit. No adjustments are made for the inclusion or exclusion of amenities and services such as heat, hydro, parking, and hot water. For available and vacant units, the rent is the amount the owner is asking for the unit.

It should be noted that the average rents reported in this publication provide a sound indication of the amounts paid by unit size and geographical sector. Utilities such as heating, electricity and hot water may or may not be included in the rent.

Rental Apartment Structure: Any building containing three or more rental units, of which at least one unit is not ground oriented. Owner-occupied units are not included in the rental building unit count.

Rental Row (Townhouse) Structure: Any building containing three or more rental units, all of which are ground oriented with vertical divisions. Owner-occupied units are not included in the rental building unit count. These row units in some centres are commonly referred to as townhouses.

Vacancy: A unit is considered vacant if, at the time of the survey, it is physically unoccupied and available for immediate rental.

Definitions of Census Areas referred to in this publication are as follows:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree of integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

All data presented in this publication is based on Statistics Canada's 2001 and 2006 Census area definitions.

Acknowledgement

The Rental Market Survey and the Secondary Rental Market Survey could not have been conducted without the cooperation of the rental property owners, managers, building superintendents and household members throughout Canada. CMHC acknowledges their hard work and assistance in providing timely and accurate information. As a result of their contribution, CMHC is able to provide information that benefits the entire housing industry.

Rental Affordability Indicator

Canada Mortgage and Housing Corporation has developed a new rental affordability indicator to gauge how affordable a rental market is for those households which rent within that market. The level of income required for a household to rent a median priced two-bedroom apartment, using 30 per cent of its income, is calculated. The three-year moving average of median income of households in a centre is then divided by this required income. The resulting number is then multiplied by 100 to form the indicator. A value above 100 indicates that less than 30 per cent of the median income is required to rent a two-bedroom apartment, conversely, a value below 100 indicates that more than 30 per cent of the median income is required to rent the same unit. In general, as the indicator increases, the market becomes more affordable; as the indicator declines, the market becomes less affordable.

Median renter household income estimates used in the calculation of the rental affordability indicator are based on results of Statistics Canada's Survey of Labour and Income Dynamics. Results for this survey are available from 1994 to 2005. CMHC has developed forecasts of median renter household income for 2006, 2007, 2008 and 2009.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 60 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable homes – homes that will continue to create vibrant and healthy communities and cities across the country.
