Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

User information

Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0^s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- p preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- E use with caution
- F too unreliable to be published

Notes: Data in tables may not sum due to rounding.

Charts

1.	Total cargo handled at Canadian ports and marine terminals	12
2.	International cargo handled at Canadian ports and marine terminals	13
3.	Domestic cargo handled at Canadian ports and marine terminals	13

Highlights

- Total cargo handled at Canadian ports and marine terminals increased (0.4%) in 2007, primarily due to a rise in outward international shipments (3.8%).
- The gain in outgoing international shipments was substantially offset by a decline in incoming international shipments (-3.5%), as well as a drop in the total domestic cargo (-1.0%).
- Both the volume and the tonnage of containerized cargo handled at Canadian ports increased during the year. More than 4.2 million twenty-foot equivalent units (TEUs) of containers, and 36.2 million metric tonnes of containerized cargo were handled in 2007. These represent increases of 6.1% and 9.7%, respectively, from the 2006 levels.
- The decline in shipments to and from the United States continued in 2007. Total tonnage decreased 3.0%, due primarily to declines in outbound shipments to Great Lakes and Atlantic and Gulf regions of the United States. Shipments to and from the United States represented 36.9% of the total international tonnage.
- Total international shipments excluding the United States increased by 3.5% to 210.6 million metric tonnes in 2007, largely due to higher outbound cargo (9.6%).
- Total cargo handled by the ports and marine terminals of the 19 Canadian Port Authorities (CPAs) edged up 0.1% in 2007. Even with the modest increase, these ports continued to handle more than 50% of the total cargo. Meanwhile, loadings and unloadings at non-CPA ports grew 0.9% this year.
- Canada's busiest port, the Port of Vancouver, handled more than 81.4 million metric tonnes of cargo in 2007, an increase of 1.3% which was mainly due to more containerized international shipments.
- The port of Come-By-Chance was busier in 2007, up by 6.5 million metric tonnes (23.4%). More crude petroleum (the primary commodity) was handled at the port.
- The largest decline in the total shipments was registered at North Arm Fraser River port, where the tonnage dropped by more than 2.6 million metric tonnes (-48%) in 2007, due mainly to decline in the shipments of logs and other wood in the rough.
- The port of Prince Rupert opened its container handling facility in late 2007 and more than 12,000 TEUs of containers were handled at the port during the last quarter of the year. Total tonnage handled at the port increased by 2.8 million metric tonnes (37.3%) during the year.
- Port Hawkesbury handled 31.6 million metric tonnes of cargo in 2007, almost the same as the previous year. The declines in international shipments handled at the port were nearly balanced by increases in total domestic shipments during the year.
- The port of Québec, including Lévis, handled 26.6 million metric tonnes of cargo in 2007, up 15.2% compared to 2006. The increase was attributed to both higher inbound and outbound international shipments.
- Total shipments handled at the port of Saint John, New Brunswick, rose 8.8% to reach 26.1 million metric tonnes in 2007, due mainly to increased domestic shipments of crude petroleum.
- Total shipments for the Port of Montréal (including Contrecoeur) increased 3.7% to 25.6 million metric tonnes in 2007. The increase was attributed to both higher international and domestic shipments.

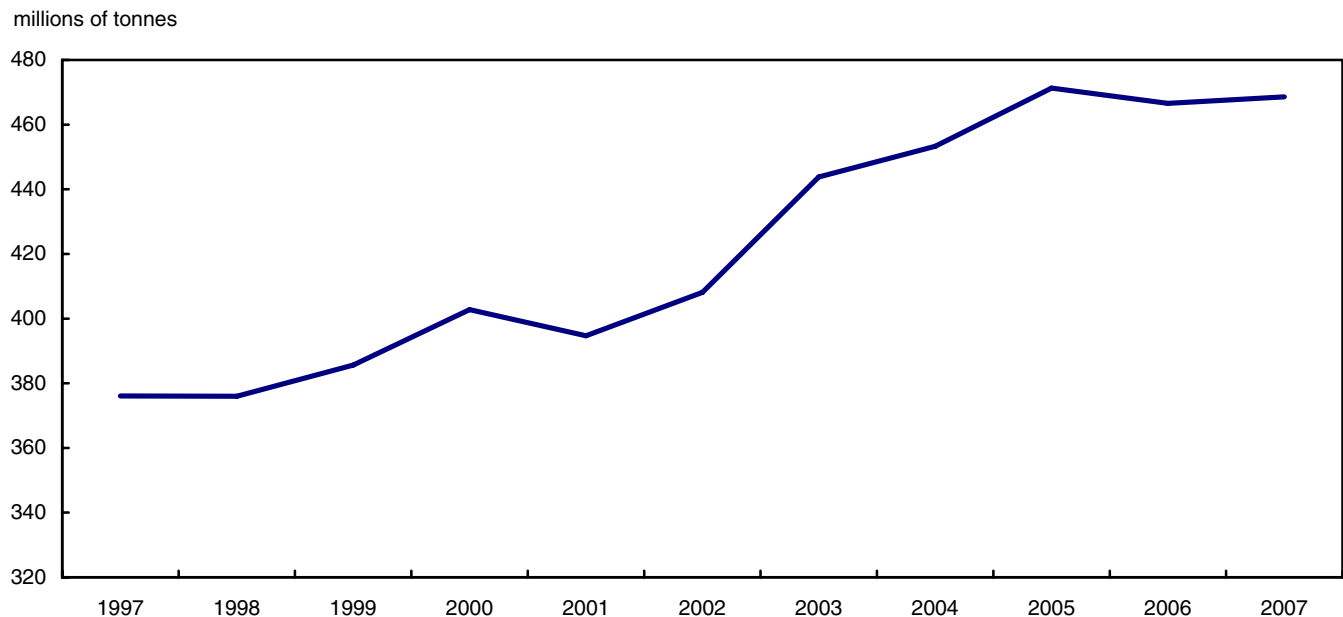

- The port of Sept-Îles, including Pointe-Noire, handled 21.4 million metric tonnes of cargo in 2007, down 8.2% from the 2006 level, due mainly to lower international outbound shipments of the port's primary commodity, iron ores and concentrates.
- Total tonnage handled at Port-Cartier rose 12.9% in 2007 to reach over 20.0 million metric tonnes, due mainly to increased international shipments of wheat and iron ores and concentrates.
- Total international and domestic shipments of crude petroleum, the single largest commodity covering more than 20% of the total tonnage handled by the Canadian marine transportation system, went up by 16.1% to 98.8 million metric tonnes in 2007.

Shipping in Canada 2007 (preliminary)

Canadian ports and marine terminals handled slightly higher tonnage in 2007, after experiencing a decline the previous year, on account of increased outbound international shipments. During the same year, growth in real GDP stood steady at 2.7%.¹ The nominal value of total merchandise trade rose 2.1% to \$878.1 billion in 2007, despite higher commodity prices and stronger exchange rate of the Canadian dollar in relation to the United States dollar. International trade in goods with the United States remained steady at \$625.8 billion due to lower exports.² A soaring Canadian dollar, coupled with financial sector issues south of the border led to decreased exports to the United States. However, international trade in goods with the rest of the world grew 7.7% in 2007.³ A higher volume of merchandise trade with countries other than the United States generated the increased activity at Canadian ports and marine terminals.

Total tonnage handled at Canada's ports and marine terminals advanced marginally by 0.4% to 468.6 million metric tonnes (Mt) in 2007. Increases in outbound international cargo were sufficient to offset declines in inbound international shipments as well as a drop in total domestic cargo. Total domestic tonnage handled fell 1.0% to 134.9Mt in 2007.⁴

Chart 1
Total cargo handled at Canadian ports and marine terminals

1. Canadian Economic Observer, April 2009. Statistics Canada catalogue No. 11-010-XIB. Comparative analyses based on data taken from various issues of the Canadian Economic Observer.
2. The volume of exports to the US came down by 1.3% to \$356.1 billion in 2007.
3. The nominal value of total merchandise trade with the European Union (EU) and the OECD (Organization for Economic Co-operation and Development) countries (except the United States), increased 6.4% in 2007 compared to 7.8% last year. With all other countries, it went up by 9.5% in 2007.
4. Note that domestic cargo is handled twice by the Canadian ports and marine terminals system, once when loaded and again when unloaded.

Chart 2
International cargo handled at Canadian ports and marine terminals

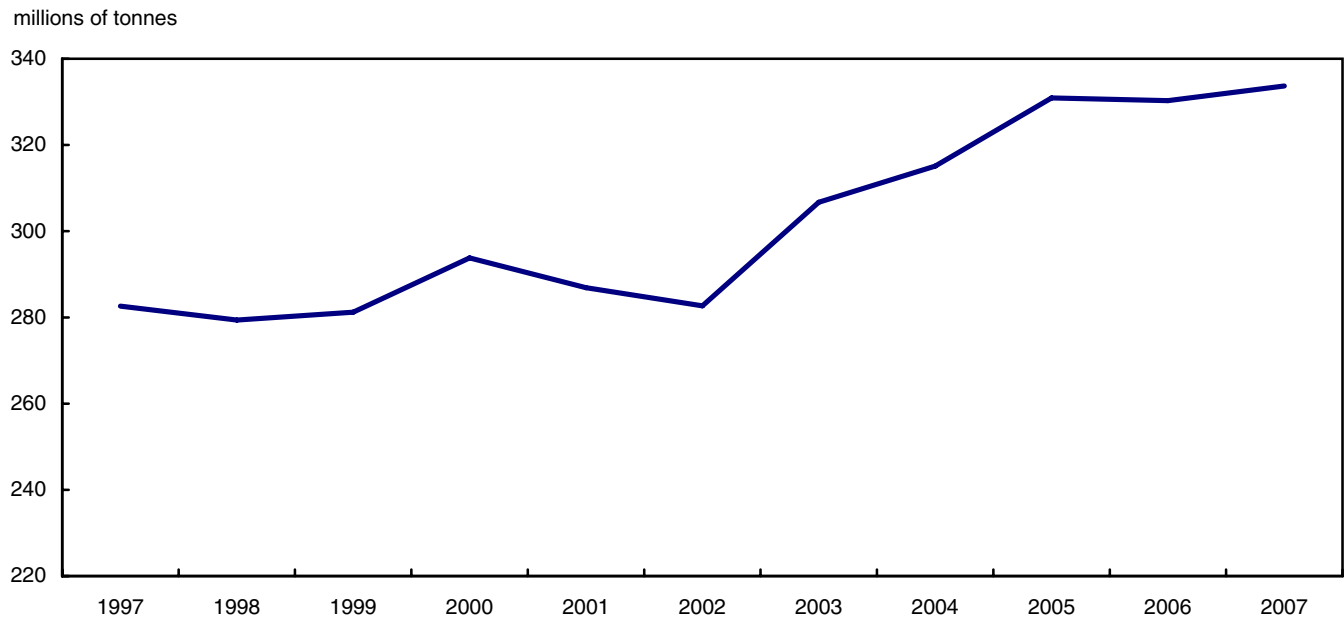

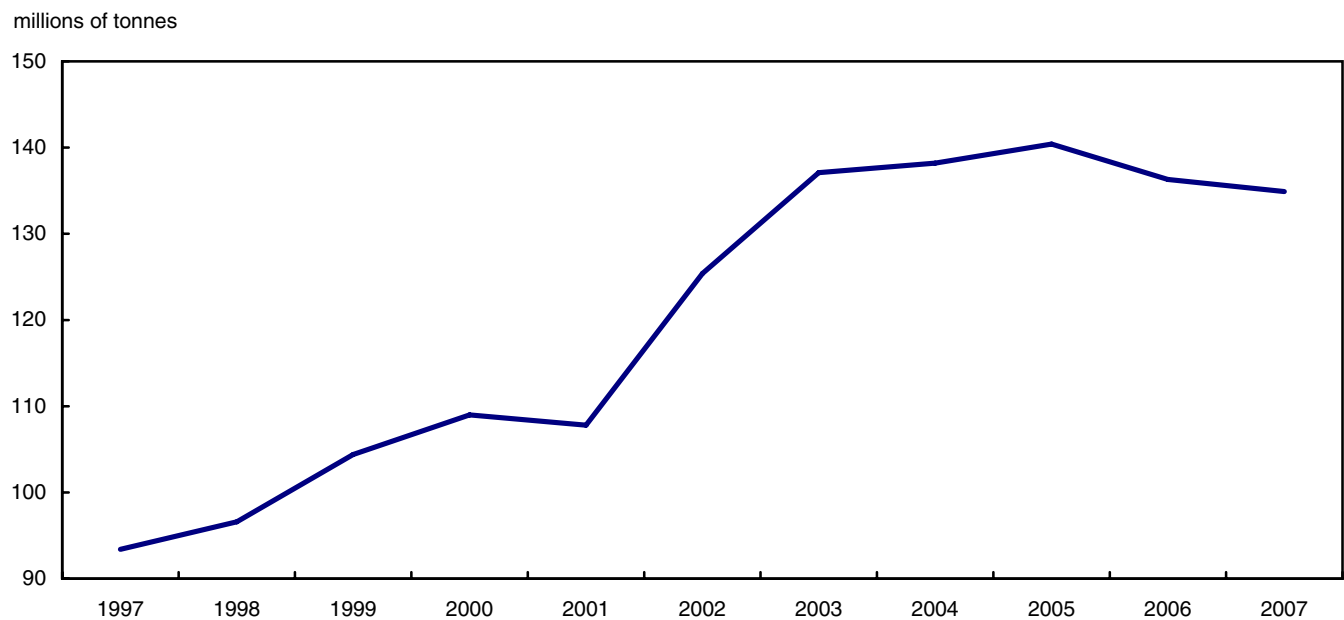

Chart 3
Domestic cargo handled at Canadian ports and marine terminals

International marine cargo

International cargo loaded at the ports and marine terminals rose 3.8% in 2007. A look at international regional destinations reveals that much of the increased outbound cargo headed for Asia (up 6.2Mt), Europe (up 2.7Mt) and the Middle East (up 1.8Mt). Commodities which mainly contributed to the rise in the outbound cargo and helped the

rebound in 2007 included coal (up 3.3Mt), crude petroleum (up 1.9Mt), potash (up 1.8Mt) and fuel oils (up 1.3Mt). Inbound cargo slipped 3.5% to 119.7Mt in 2007. The largest decline was observed in shipments originating from Europe (down 3.5Mt). In terms of commodities, the decline in inbound cargo was largely attributed to decreased tonnages of iron and steel – primary and semi-finished (down 2.3Mt), coal (down 2.1Mt) and gasoline and aviation turbine fuel (down 1.2Mt).

Container traffic

Canadian ports and marine terminals continued to handle both higher volume and tonnage of international container traffic in 2007. During the year, Canadian ports handled more than 4.2 million twenty-foot equivalent units (TEUs), up 6.1% from 2006. Total containerized tonnage increased 9.7% to 36.2Mt in 2007. The year was also marked by the opening of the country's newest container handling facility at the Port of Prince Rupert. The Port of Vancouver led the country's ports in the handling of containerized goods with 54.5% share of the total container traffic in 2007. Increases in the overall international containerized tonnage were primarily attributed to outbound shipments. The largest change in containerized shipments was observed in tonnages to and from ports in Asia (up 2.3Mt). These were followed by the ports in European (up 0.6Mt) and the Middle Eastern (up 0.2Mt) regions.

Canada – United States cargo

Total shipments to and from the United States declined 3.0% to 123.2Mt in 2007, marking the second consecutive year of decline. The drop in 2007 is largely attributed to lower outbound cargo which decreased 4.6%. Increases in inbound cargo from the United States (up 0.3%) were insufficient to offset the decline. The share of marine shipments between Canada and the United States, as a percent of the total Canadian international shipments, dropped to 36.9% in 2007 from 38.4% a year earlier.

The largest decline was observed in the shipments of iron ores and concentrates to the United States (down 2.4Mt). Other commodities which contributed to the drop were stone, sand, gravel and crushed stones (down 1.7Mt) and other non-metallic minerals (down 1.1Mt). In contrast, only slight gains were observed in the outbound shipments of several commodities, in particular, crude petroleum (up 0.9Mt) and fuel oils (up 0.7Mt). Most of the outbound shipments to the United States (65.0%) were destined for ports in the Atlantic and Gulf region. Shipments to the Great Lakes region of the United States observed the largest decline.

The increase in inbound cargo from the United States was attributed largely to the shipments of iron ores and concentrates (up 1.8Mt), followed by wheat (up 0.9Mt) and fuel oils (up 0.5Mt). The quantity of coal (down 1.7Mt), which accounted for over 37% of the total inbound cargo from the United States, considerably nullified the gains. Cargo arriving from the United States Great Lakes region fell 0.6%. However, it continued to account for the majority of the total inbound tonnage from the United States.

The share of Canada – United States cargo handled by Canadian registered vessels dropped to 38.0% in 2007 after a slight increase the previous year. Moreover, the share attributed to United States-flag vessels also declined to 11.8% in 2007 from 12.2% in 2006. As a result of both these declines, the share of commodities carried by foreign-flag ships increased to 50.2% in 2007, from 47.6% in 2006.

The share of Canadian flagged ships in the tonnage handled in the United States Great Lakes region during 2007 remained steady at 80.7%. For the year, the share of Canadian registered vessels in the cargo handled in the Pacific region of the United States increased slightly to 29.9% from 29.2% in 2006. Foreign-flag ships continued to dominate shipping activities (handling more than 90% of the cargo) between Canadian ports and the ports in the Atlantic and Gulf region of the United States in 2007.

Canada – Overseas cargo

Total overseas cargo (to and from countries other than the United States) increased for the fifth consecutive year rising 3.5% to 210.6Mt in 2007. The growth in total tonnage was due to an increase in outbound shipments

(up 11.6Mt) which were more than sufficient to offset a decline in inbound shipments (down 4.4Mt) from the overseas ports.

Outbound international cargo to countries, excluding the United States, increased 9.6% to 133.3Mt in 2007. The increase in shipments was attributed to higher tonnages of coal (up 3.2Mt), iron ores and concentrates (up 3.1Mt) and potash (up 1.7Mt). The majority of the overseas outbound cargo was destined for ports in Asia (49.5%) followed by those in Europe (28.0%).

Inbound shipments from overseas ports (excluding the United States) declined 5.4% to 77.3Mt in 2007. Decreased shipments of iron and steel – primary or semi-finished (down 2.3Mt), mostly from ports in Asia, South America and Europe were the major sources for the drop. Declines in inbound tonnages of iron ores and concentrates (down 0.9Mt), gasoline and aviation turbine fuel (down 0.8Mt) and crude petroleum (down 0.7Mt) were also registered during the year. Most of the cargo arriving at Canadian ports from overseas originated from ports in Europe (27.9%) followed by Africa (26.2%).

Vessels registered in Panama (25.7%) continued to lead in handling the overseas cargo destined to or originating from Canada. This was followed by vessels registered in Greece (10.2%), Liberia (9.0%), Hong Kong (8.5%) and Bahamas (6.5%). Overall, vessels registered in these five countries handled almost 60% of the total overseas cargo. Canadian flagged ships were of negligible importance in carrying overseas shipments.

Domestic Cargo

Canadian ports and marine terminals handled a lower amount of domestic cargo for a second year in a row. Total domestic cargo handled dropped 1.0% to 134.9Mt in 2007. Factors such as a 12-week coastal forestry workers' strike in western Canada, falling commodity prices, a strong Canadian dollar, and worsening economic conditions in the United States had a major role. Lower tonnages of logs and other wood in the rough (down 3.0Mt) and wood chips (down 2.2Mt) led the decrease. Other commodities groups that registered declines were: other metallic ores and concentrates (down 1.8Mt); salt (down 1.7Mt); wheat (down 1.5Mt) and newsprint (down 1.5Mt).

Despite the overall drop in the tonnage for domestic cargo, the sector saw a strong gain in the volume of crude petroleum handled in 2007, rising 46.2% to about 40.6Mt. However, this commodity group, which accounted for more than 30% of the total domestic cargo, was not enough to offset the decline. Increased price for petroleum products and higher demand were the driving forces behind the rise in the shipments of crude petroleum. Shipments of iron ores and concentrates (up 0.9Mt), other refined petroleum and coal products (up 0.3Mt) and colza seeds [canola] (up 0.2Mt) also saw increases in 2007.

Domestic cargo handled in the Atlantic region in 2007 surpassed the previous record set in 2003. The tonnage of domestic cargo handled in the region rose more than 13.0Mt to 52.1Mt during the year, almost exclusively on the strength of higher volumes of crude petroleum. Declines were observed in the quantities of several commodities including: other non-metallic minerals (down 0.3Mt), limestone, salt, gasoline and aviation turbine fuel (each down 0.2Mt), and fuel oils (down 0.1Mt).

Domestic tonnage handled in the St. Lawrence region fell 9.1% to 26.8 Mt in 2007. Decreased shipments of other metallic ores and concentrates (down 1.9Mt), wheat (down 0.7Mt), salt (down 0.6Mt) and wood chips (down 0.2Mt) were mainly responsible for the decline. Despite this drop, there were gains in other commodity groups including iron ores and concentrates (up 1.2Mt), gasoline and aviation turbine fuel and iron and steel – primary or semi-finished (each up 0.2Mt).

Total domestic tonnage handled at the ports and marine terminals in the Great Lakes region decreased 7.0% or 2.3Mt in 2007. Principal commodity groups contributing to the decline included wheat (down 0.8Mt), salt (down 0.7Mt), limestone (down 0.4Mt) and iron ores and concentrates (down 0.3Mt). Increased tonnages of colza seeds [canola] (up 0.2Mt) and gasoline and aviation turbine fuel (up 0.1Mt) were not enough to offset the decline.

Ports in the Pacific region handled 25.6Mt of domestic cargo (down 27.0% or 9.5Mt) in 2007. The largest decline was registered in the volume of logs and other wood in the rough (down 3.0Mt) due mainly to labour disruptions in the region. Other major commodities groups contributing to the decline were wood chips (down 2.0Mt), stone, sand,

gravel and crushed stone (down 1.7Mt) and newsprint (down 1.3Mt). A marginal increase was noted in the volume of non-metallic waste and scrap handled in the region during the year.

Port Authorities

Ports and marine terminals under 19 Canadian Port Authorities (CPAs)⁵ continued to handle more than fifty percent of the total cargo in 2007.

The period of positive growth in total tonnage handled at the Port of Vancouver that started in 2003 continued in 2007, due mainly to increased outbound shipments to Asia. Total cargo handled at the port increased 1.3% to 81.4Mt in 2007. Principal commodities groups that contributed to the increase were potash (up 1.8Mt), coal (up 1.0Mt) and crude petroleum (up 0.7Mt). Coal continued to represent the port's primary commodity⁶ shipped in 2007. The largest decline was registered in the volume of stone, sand, gravel and crushed stone (down 1.2Mt), due mainly to decreased outbound shipments to the United States Pacific region. Other major commodity groups which saw declines included grains⁷ (down 1.1Mt), sulphur (down 0.7Mt) and wood chips (down 0.5Mt).

The port also handled 54.5% of the total container traffic in 2007. It handled more than 2.3 million TEUs, up 4.0% in 2006, due to increases in both inbound and outbound traffic. The total containerized tonnage at the port grew 9.8% to 18.2Mt in 2007.

The Port of Québec (including Lévis) showed a strong performance in 2007. It was the second busiest port among the CPAs in terms of total cargo handled.⁸ Total tonnage handled at the port increased 15.2% to 26.6Mt in 2007 due mainly to higher international transshipments.⁹ The largest increase was realized in international shipments of iron ores and concentrates (up 2.7Mt), followed by crude petroleum (up 1.2Mt) and cement (up 0.3Mt). The decline in the shipments of coal coke and petroleum coke (down 0.8Mt), gasoline and aviation turbine fuel and salt (each down 0.2Mt) were not enough to offset the increase.

The Port of Saint John, New Brunswick, saw an increase of 8.8% in the total shipments handled to 26.1Mt in 2007 due largely in part to increased domestic shipments of crude petroleum (up 1.6Mt). Gains in the shipments of fuel oils (up 0.8Mt) and gasoline and aviation turbine fuel (up 0.2Mt) were among the major contributors to the increase. Despite the overall increase in shipments, drops in the tonnages of commodities including other basic chemicals, wood pulp, articles of base metal and metallic waste and scrap were realized during the year. The volume of containers handled at the port rose 10.3% to 47,700 TEUs during the year.

Total tonnage handled at the port of Montréal (including Contrecoeur) advanced 3.7% to 25.6Mt in 2007. Increased shipments of fuel oils (up 0.4Mt), iron ores and concentrates (up 0.3Mt), other oils seeds and nuts and other agricultural products, other basic chemicals and fertilizers [excluding potash] (each up 0.2Mt) contributed to the increased activity at the port. Additionally, shipments of other non-metallic mineral products, lumber, fresh, chilled or dried vegetables and alcoholic and non-alcoholic beverages (each up 0.1Mt) also contributed to increase in total shipments. The gains were considerable to offset the declines in shipments of other commodity groups. The port, which is Canada's second largest container handling port, handled 1.3 million TEUs, up 9.8%, in 2007. Containerized cargo represented 59.1% of the total international tonnage handled at the port during the year.

Shipping activity at the Port of Sept-Îles (including Pointe-Noire) is closely associated with mining activities in the region. Total cargo handled at the port decreased 8.2% to 21.4Mt, from the 2006 level. The decreased level of activity at the port was mainly the result of a 7-week strike at Iron Ore Company of Canada's mine in the area. Exports of iron ores and concentrates, which represented over 89% of the port's total international shipments, declined 8.4% to 16.7Mt in 2007, from the 2006 level. In addition, decreased shipments of metallic waste and scrap and other non-metallic minerals also contributed to the decline in the overall tonnage at the port.

5. Canadian Port Authorities, created under Canadian Marine Act (1998), are: Belledune, Fraser River, Halifax, Hamilton, Montréal, Nanaimo, North Fraser River, Port Alberni, Prince Rupert, Québec, Saguenay (Chicoutimi), Saint John, Sept-Îles, St. John's, Thunder Bay, Toronto, Trois-Rivières, Vancouver and Windsor Ontario.

6. Share of coal in the total tonnage handled at the port increased to 30.5% in 2007, from 29.7% last year.

7. Grains include wheat, colza seeds (canola), barley, rye, oats and other cereal grains.

8. The Port of Québec, including Lévis, moved up to 4th from 8th largest port among all Canadian ports.

9. The cargo that is unloaded at a port and reloaded onto another vessel. It is therefore handled twice by the same port, sometimes after a period of storage.

Overall cargo handled at the port of Halifax fell 8.3% to 12.6Mt in 2007. This marked the fourth consecutive year of decline in port activity. The drop in 2007 was due mainly to declines in international shipments of other non-metallic minerals (down 0.4Mt) and other manufactured and miscellaneous goods (down 0.2Mt). A drop in the shipments of domestic inbound crude petroleum (down 0.2Mt) also brought activity down at the port. Container traffic at the port¹⁰ fell 10.3% to 445,000 TEUs during the year. Container activity at the port was impacted by the restructuring of the activities of some of the vessels that call at the port.

The Port of Hamilton handled 11.5Mt of cargo in 2007, down 8.8% from the level in 2006. The decline was due mainly to lower imports of iron and steel – primary or semi-finished (down 0.8Mt) and coal (down 0.3Mt). Domestic shipments of wheat (down 0.2Mt) and the volume of salt (down 0.1Mt) handled at the port also contributed to the decline. Increased volume of iron ores and concentrates¹¹ (up 0.3Mt) along with increased inbound international shipments of fertilizers (excluding potash) (up 0.1Mt) were not enough to offset the decline.

Total shipments handled at Fraser River Port declined for a third consecutive year due mainly to decreased domestic traffic. Overall cargo handled at the port declined 16.0% to 11.2Mt in 2007. Domestic shipments of stone, sand, gravel and crushed stone (down 0.8Mt), newsprint (down 0.5Mt) and limestone (down 0.4Mt) largely contributed to the decline. Lower imports of iron and steel – primary or semi-finished (down 0.5Mt) and exports of logs and other wood in the rough (down 0.4Mt) also contributed to the decline. The port handled more than 163,000 TEUs of containers in 2007, more than double the volume handled the previous year.

Total cargo handled at the port of Prince Rupert rose 37.3% to 10.5Mt in 2007, marking the second highest increase in tonnage among the CPAs. Increased global demand for industrial fuels (including coal and petroleum coke), strong demand for agricultural products and the opening of a new container handling facility were among the factors contributing to the increased activity at the port. Increased shipments of coal (up 2.3Mt) to Asian and European destinations took the activity at the port to levels observed in late 1990's. In addition, for the first time the port handled over 12,000 TEUs of containers in 2007.

The Port of Thunder Bay handled 8.5Mt of cargo in 2007, up 1.8% from the 2006 level, primarily due to increased international shipments. Increased shipments of coal (up 0.2Mt) and barley (up 0.1Mt) coupled with a rise in the domestic shipments of colza seeds [canola] (up 0.1Mt) were the main contributors to the increase. These gains were counteracted by declines in the total tonnage of feed, cereal straw, eggs and other animal products (down 0.3Mt).

Activities at the Port of Windsor (Ontario) slowed in 2007, after three consecutive years of growth. Total tonnage handled at the port dropped 0.7Mt to 4.9Mt during the year. The decline was attributed mainly to lower inbound international shipments of limestone (down 0.4Mt) and iron and steel – primary or semi-finished (down 0.2Mt).

Total shipments handled at North Arm Fraser River port declined 48.3% to 2.8Mt in 2007, after registering increases for two consecutive years. Both inbound and outbound traffic at the port, which handles only domestic cargo, saw declines in 2007. All the commodity groups handled at the port experienced drops except for non-metallic waste and scrap, which rose 22.7%.

Total tonnage handled at the port of Trois-Rivières fell 18.3% to 2.4Mt in 2007. This marked the lowest amount of shipments handled at the port since 2003. Both domestic and international shipments accounted for the overall drop in tonnage. The commodity groups with the largest declines in shipments were salt, wood chips, wheat, other non-metallic minerals and other oil seeds. Increased domestic shipments of other non-ferrous metal – primary or semi-finished were not enough to offset the decline.

Cargo handled at the Port of Nanaimo declined for the second consecutive year, falling 17.2% to 1.9Mt in 2007 due primarily to a decline in domestic shipments. Decreased shipments of wood chips (down 0.3Mt), the port's primary commodity in terms of domestic shipments,¹² and lumber (down 0.1Mt) were the primary contributors to the decline.

The Port of Belledune handled 7.8% more cargo in 2007, compared to the 2006 level. International cargo, which represented a bulk of the total cargo handled by the port, was the main factor behind the increase. Increased

10. Containerized cargo loaded and unloaded at the Port of Halifax, the third largest container handling port of the country, represented 39.7% of the total international tonnage handled at the port in 2007.

11. Inbound shipments of iron ores and concentrates were switched from domestic (down 0.3Mt) to international (up 0.6Mt) sources.

12. Domestic shipments of wood chips represented more than 90% of the domestic cargo handled at the port in 2007.

international shipments of other metallic ores and concentrates, coal coke and petroleum coke were the principal commodities contributing to the increase.

Total volume handled at the port of Toronto dropped for the second consecutive year, decreasing 2.4% to 1.7Mt in 2007, due primarily to a decline in domestic shipments. Three major commodity groups, which accounted for 85% of the total shipments, handled at the port included sugar, salt and cement. Total cargo of salt and sugar shipped through the port declined (0.1Mt) in 2007. Increased shipments of the third commodity group (cement) could not offset the declines experienced in the volumes of salt and sugar.

Logs and other wood in the rough accounted for more than 95% of the total tonnage handled at the Port of Alberni in 2007. Total shipments handled at the port increased 0.1Mt to 1.6Mt during the year due primarily to higher international outbound shipments of logs and other wood in the rough to destinations in the United States Pacific region and Asia.

Total shipments for the Port of St. John's, Newfoundland and Labrador dropped 0.1Mt to 1.4Mt in 2007, due mainly to decline in both international and domestic activities. Decreased shipments of gasoline and aviation turbine fuel were the main contributors to the decline in shipments at the port.

The declining trend in the total shipments handled at Port Saguenay (Chicoutimi) continued in 2007. The total cargo dropped by 41,000 metric tonnes (-11.8%) to 0.3Mt. Lower domestic shipments of salt coupled with decreased international tonnages of wood pulp were principally responsible for the decline. An increase in the international shipments of lumber could only partially offset the decline.

Data quality, concepts and methodology

Introduction

The statistics in this publication were collected under the authority of the *Statistics Act* (Revised Statutes of Canada, 1985, chapter S19). The statistics are derived from two surveys: the Coastwise Shipping Survey (Survey number 2751) and the Marine International Freight Origin Destination Survey (Survey number 2791).¹ The purpose, populations, data sources, and data quality for these surveys are discussed in the following sections.

Purpose of the surveys

These surveys collect data on:

- Coastwise or domestic marine transport - the carriage of cargo by ships between Canadian ports in Canadian waters; and,
- International marine transport – the carriage of cargo between Canadian ports and foreign ports in the United States or overseas.

The information collected in these surveys includes the description and quantities of commodities loaded and unloaded at Canadian ports and marine terminals by vessels calling at those facilities, and the origin and destination of those commodities. Data are aggregated for publication of commodity traffic by Canadian port and foreign country of origin or destination.

Statistics Canada uses these data as one input to Canada's System of National Accounts. The data are also used by Transport Canada, other federal departments, provincial ministries, transportation companies, consulting firms, universities and foreign governments. This information is used to analyse transportation activities, for marketing and economic studies, and to assess the industry's performance.

Survey populations

For each survey it is possible to define a target population as all the units (e.g., ships) for which data were intended to be collected and a survey population as all the units for which the survey actually provides data. The survey population may differ from the target population when it is not possible to identify or to survey all of the units within the target population.

The target populations of the Coastwise Shipping Survey and the Marine International Freight Origin Destination Survey are all ships that carry cargo between Canadian ports or between Canadian ports and foreign ports.

The Coastwise Shipping Survey population is somewhat different from the target population. It consists of ships engaged in domestic shipping at Canadian ports, with the exception of:

- i. cargo vessels less than 15 net register tons (NRT);
- ii. tugs or other vessels under 15 gross register tons (GRT);
- iii. Canadian naval ships;

1. For more information see Coastwise Shipping Survey: www.statcan.ca/english/sdds/2751.htm and International Freight Origin Destination Survey: www.statcan.ca/english/sdds/2791.htm.

- iv. fishing vessels;
- v. research vessels;
- vi. ballast movements for towboat and ferry operators on the West Coast ports;
- vii. cargo carried in trucks and rail cars on domestic vehicle ferries.

This limited survey field may have a significant impact on the statistics reported for some commodities, regions and ports such as the Pacific Coast, where a number of tugs that are under the GRT threshold are engaged in the towing log booms. The exclusion of ferry traffic will also affect the statistics for cargo transported to and from islands such as Newfoundland, Prince Edward Island and Vancouver Island. However, this cargo should be reflected in statistics collected for freight transported by the truck and rail modes.

The survey population for the Marine International Freight Origin Destination Survey includes vessels engaged in international shipping at Canadian ports with the exception of (i) fishing boats registered in Canada or abroad, (ii) maintenance and service ships such as icebreakers, (iii) research vessels and (iv) other non-commercial vessels such as hospital ships.

Data sources

Data for the Coastwise Shipping Survey are collected directly from the owners, operators, agents or officers of ships engaged in domestic shipping. The data are reported on one of two questionnaires, either the *S.1, Domestic Shipping Report* or the *S.4, Towboat and Ferry Operators Shipping Report*. The operators of cargo-carrying ships arriving and departing Canadian ports or marine terminals complete these reports for each such arrival and departure. The S.1 Report provides the following information: vessel name, country of registration, the vessel's gross and net registered tonnage, cargo description, tonnage and ports of loading and unloading. The S.4 Report is used only on the West Coast by operators of tugs, cargo barges and ferries for monthly reporting of coastal shipping. These operators do not report ballast movements. The S1 and S4 Reports are sent to Statistics Canada each month.

Information on international shipping is collected from the Advance Commercial Information (ACI) program & the A6 General Declaration and manifests required by the Canada Border Services Agency (CBSA) for each ship loading or unloading cargo in Canada that either originated in or is destined to a foreign country. Local CBSA employees send copies of these documents to Statistics Canada. In some cases, marine agents or port authorities send equivalent reports to Statistics Canada. The data provided by the ACI program & the Form A6 and its annexes provide information on: the vessel's name and country of registration, registered gross and net tonnage, and information such as the description of the cargo, tonnage containerizes information and ports where commodities will be loaded and unloaded. These variables constitute the database for statistics on international shipping.

Data quality

All statistical surveys are subject to errors. The total error of a survey is defined as the difference between the survey estimate and the actual value for the target population. Survey errors can be classified as "sampling" or "non-sampling" errors. The marine transport surveys are censuses and are therefore not subject to sampling errors.

There are four main types of non-sampling errors:

- i. Coverage errors (when the survey frame does not thoroughly cover the target population);
- ii. Response errors (when a respondent provides inaccurate information);
- iii. Non-response errors (when a respondent does not respond to all or part of the questionnaire) and,
- iv. Processing errors (errors made during data capture, coding, and editing).

The Coastwise Shipping Survey is thought to be more affected by coverage errors than the Marine International Freight Origin Destination Survey. The survey population is smaller than the target population due to the size threshold and the various ship types that are exempted (e.g., vehicle and rail ferries) and the practical difficulty of identifying the fleet of all ships that are active in the domestic transport of cargo. With respect to the Marine International Freight Origin Destination Survey, customs rules apply to all ships arriving from or departing for foreign ports. However, Statistics Canada has only limited tools for identifying missing shipping documents.

Both surveys have significant exposure to response error, particularly in terms of the reported commodities. The marine carrier of domestic and international cargo is not always able to provide descriptions that are sufficiently detailed to accurately code the commodity. Terms such as general cargo are often used in cases where the carrier is unsure of the exact contents of a container or when there are a number of commodities being transported in one shipment. As result, residual categories such as “Other manufactured and miscellaneous goods” and “Other chemical products and preparations” may be overestimated while the true commodity is understated. Respondents may also use incorrect conversion factors in estimating the weight of a shipment.

Non-response errors are expected to have more of an effect on the Coastwise Shipping Survey. Shipping reports are not submitted for all vessel traffic Canadian ports. It is known that there is a significant amount of under-reporting for the Pacific Coast and the Mackenzie River. While it is assumed that the reporting to the Canada Border Services Agency (CBSA) of international traffic is fairly comprehensive, there are occasions when reports are not forwarded to Statistics Canada, particularly for ports in the Canadian Arctic and other remote areas that do not have local customs offices.

Both surveys are subject to processing errors during data entry, including errors in transcribing and coding information and in converting cargo quantities from non-weight units (e.g., barrels or cubic metres to kilograms). Errors may also be introduced during editing and imputation procedures that are used to correct data that appear to be erroneously reported or partially reported. A number of techniques are used to detect and resolve these errors including micro and macro analysis of the data for congruency and consistency with information acquired from other sources (e.g., cargo statistics from port authorities and economic statistics from other Statistics Canada divisions).

Appendix I

Glossary

Terms related to reporting forms

Advance Commercial Information (ACI): The Canada Border Services Agency (CBSA) introduced the ACI program to replace, at the first port of call, A6/A6A paper reporting with electronic reporting of key variables for vessels arriving from any port outside Canada. These include such information as name and nationality of vessel, net and gross register tonnage, last port of call and cargo particulars such as tonnage unloaded and handling port. The program was implemented in two phases. Phase 1 was implemented in April 2004 and applied to cargo loaded at foreign ports, excluding the United States. Cargo loaded in the United States will be required to be reported using ACI beginning in July 2006.

A6 General declaration: This is an administrative document which is submitted along with supporting cargo reports to Canada Border Services Agency (CBSA). The document should be completed for every vessel arriving from outside Canada or departing for any port or place outside Canada with the exception of those required to report using ACI. The A6 General Declaration provides such information as name and nationality of vessel, net and gross register tonnage, next/last port of call, and cargo particulars such as tonnage loaded or unloaded, and handling port.

S.4 Towboat and ferry operators shipping report: This report is used principally by members of the British Columbia Council of Marine Carriers to report the domestic shipping activities of tug, barge, scow and ferry operators on the west coast. The report is filed on a monthly basis and excludes ballast movements.

S.1 Domestic shipping report: This report is completed by ships' officers or operators of vessels engaged in domestic shipping arriving at or departing from Canadian ports. It contains such information as: vessel name, net and gross register tonnage, commodity description and tonnage, ports of loading and unloading. This is the principal source of data for the production of domestic shipping statistics.

Terms related to cargo

Ballast movement (arrival or departure): An arrival at a port is considered ballast if there is no cargo unloaded from the vessel at that port. A departure from a port is considered ballast if there is no cargo loaded on the vessel at that port. Ferry (passenger and cars) movements also count as ballast movements since there is no loading/unloading of commercial cargo.

Commodity: Cargo loaded or unloaded is classified according to a structure based on Statistics Canada's Standard Classification of Transported Goods (SCTG).

Lightering: This term refers to the loading/unloading of cargo in a harbour rather than at a dock or wharf. Cargo tonnage is included with port totals.

In-transit cargo: Foreign cargoes handled at Canadian ports en route for or from a third country. Since tonnages are included in port totals, the statistics do not necessarily reflect import and export tonnages, but are rather focused on port activity.

Terms related to ports

Destination: The port of unloading of cargo is considered the port of destination. This is not necessarily the point of ultimate destination of cargo, which may be inland. Relative to the international shipping sector, this is the foreign port or country of unloading and not necessarily the ultimate country of destination.

Origin: The port of loading of cargo is considered the port of origin. This is not necessarily the point of actual origin of cargo, which may be inland. Relative to the international shipping sector, this is the foreign port or country of loading and not necessarily the actual point of origin.

Handling port: The Canadian port of loading/unloading of cargo. This does not necessarily coincide with the Customs Port, or the municipality of the same name.

Atlantic region: This region consists of Canadian ports on the Atlantic Ocean and Arctic Waters, and that portion of the Gulf of St. Lawrence which is east of the inland waters as defined in the Canadian Shipping Act.

Great Lakes region: This region consists of Canadian ports located along the St. Lawrence river west of the Ontario-Quebec border, and on the Great Lakes.

Pacific region: This region consists of Canadian ports located on the Pacific Coast and the Mackenzie River.

St. Lawrence River region: This region consists of Canadian ports located on the St. Lawrence river from the Ontario-Quebec border eastward, along the north shore to 63° west longitude and along the south shore to Cap des Rosiers.

Terms related to vessels

Gross register tonnage: The capacity in cubic feet of the spaces within the hull and of the enclosed spaces above the deck of a vessel, divided by 100. This is the figure as reported on the A6 General Declaration or the S1 and S4 reporting forms.

Net register tonnage: The gross register tonnage (as defined above) minus the capacity utilized by propelling machinery, fuel, and personnel accommodation.

In ballast: A vessel is considered arriving or departing "in ballast" if no cargo is loaded when leaving a Canadian port or no cargo is unloaded when arriving at a Canadian port.

LO LO: an acronym for "lift on, lift off". System of loading and discharging whereby cargo is lifted on and off a ship by the use of cranes.

RO RO: An acronym for "roll on, roll off". System of loading and discharging a ship whereby the cargo is driven on and off.
