## How to obtain more information

For information about this product or the wide range of services and data available from Statistics Canada, visit our website at [www.statcan.gc.ca](http://www.statcan.gc.ca), e-mail us at [infostats@statcan.gc.ca](mailto:infostats@statcan.gc.ca), or telephone us, Monday to Friday from 8:30 a.m. to 4:30 p.m., at the following numbers:

### Statistics Canada's National Contact Centre

Toll-free telephone (Canada and the United States):

Inquiries line	1-800-263-1136
National telecommunications device for the hearing impaired	1-800-363-7629
Fax line	1-877-287-4369

Local or international calls:

Inquiries line	1-613-951-8116
Fax line	1-613-951-0581

### Depository Services Program

Inquiries line	1-800-635-7943
Fax line	1-800-565-7757

## To access this product

This product, Catalogue no. 62-011-X, is available free in electronic format. To obtain a single issue, visit our website at [www.statcan.gc.ca](http://www.statcan.gc.ca) and browse by "Key resource" > "Publications."

## Standards of service to the public

Statistics Canada is committed to serving its clients in a prompt, reliable and courteous manner. To this end, Statistics Canada has developed *standards of service* that its employees observe. To obtain a copy of these service standards, please contact Statistics Canada toll-free at 1-800-263-1136. The service standards are also published on [www.statcan.gc.ca](http://www.statcan.gc.ca) under "About us" > "Providing services to Canadians."

## Symbols

The following standard symbols are used in Statistics Canada publications:

- . not available for any reference period
- .. not available for a specific reference period
- ... not applicable
- 0 true zero or a value rounded to zero
- 0<sup>s</sup> value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
- p preliminary
- r revised
- x suppressed to meet the confidentiality requirements of the *Statistics Act*
- E use with caution
- F too unreliable to be published

## Note on CANSIM

Data that appears in the **Industry Price Indexes** (catalogue no. 62-011-X) are also available electronically in our CANSIM (Canadian Socio-Economic Information Management System) database through the Internet tables 329-0038 to 329-0050 and 330-0006, at a cost of \$3.00 per series. In general, *CANSIM* provides a longer historical series. For further information on *CANSIM* call 1-800-263-1136.

## Revision

Unless otherwise stated, price indexes in this publication are subject to revision for the most recent six months shown. Any revisions beyond these limits are so indicated.

## Acknowledgements

This publication was prepared under the direction of:

- **André Loranger**, Director, Producer Prices Division
- **Leon Comeau**, Chief, Production, Goods and Construction Prices Section

I Concordance table	168
---------------------	-----

## Highlights

---

- The IPPI in June relative to May fell 0.9%, mainly as a result of lower prices for petroleum and coal products (-2.3%) and primary metal products (-2.9%).
- The Canadian dollar appreciated 0.2% in June relative to the US dollar. Some Canadian producers who export their products to the United States are generally paid in prices set in US dollars. If the exchange rate used to convert these prices had remained unchanged, the IPPI would have fallen 0.8% instead of 0.9%.
- Excluding petroleum and coal prices, the IPPI decreased 0.6%, after moving in the opposite direction in the previous two months. The Index has been fairly stable since June 2009.
- Since June 2009, the IPPI rose 0.2%, marking its second year-over-year increase following more than a year of consecutive declines.
- Over the last 12 months, the IPPI advance was mainly led by higher prices for primary metal products (+8.4%).
- On the other hand, the IPPI year-over-year advance was moderated by a decrease in prices for motor vehicles and other transportation equipment (-4.4%).
- Between June 2009 and June 2010, the IPPI excluding petroleum and coal edged down 0.1%, same rate of decline as in May.
- The RMPI in June relative to May declined 0.3% following a 7.3% drop in May. It was the second consecutive monthly decrease after four successive gains.
- In June, the decline in the RMPI was mainly a result of lower prices for non-ferrous metals (-6.7%) and, to a lesser degree, animals and animal products (-2.2%).
- The downward movement in raw materials prices was moderated primarily by a 2.0% increase in mineral fuels prices. Crude oil prices rose 2.4%, after dropping significantly by 14.2% in May.
- Excluding mineral fuels, the RMPI decreased 2.4% in June following a 1.6% fall in May.
- Over the last 12 months, the RMPI edged down 0.1%, their first decline after seven consecutive increases starting in November 2009. In June, mineral fuels prices were down 1.3% year-over-year, while prices for vegetable products dropped 9.5%.

## Analysis

---

The Industrial Product Price Index (IPPI) fell 0.9% in June, mainly as a result of lower prices for petroleum and metals.

The downturn in the IPPI came after two consecutive monthly advances. Among the IPPI product groups, nine were down, seven were up, and the remainder were unchanged.

In June, the IPPI decrease was led by lower prices for petroleum and coal products (-2.3%), primary metal products (-2.9%) and, to a lesser extent, by chemicals and chemical products (-1.7%) and lumber and other wood products (-2.3%).

All primary metal products prices were down except for iron and steel products, which remained unchanged. The biggest contributor to the decline was nickel products (-12.0%), followed by copper and copper alloys (-5.4%), other non-ferrous metal products (-2.7%) and aluminum products (-3.6%).

The downward movement of other non-ferrous metal products was mainly due to refined zinc products, down 12.2%.

Lower prices for chemical products were in-part due to decreasing petroleum prices, particularly organic chemicals, which dropped 7.8%.

The decline in prices for lumber and other wood products was mainly attributable to lower prices for lumber and ties (-4.3%) and softwood veneer and plywood (-9.0%).

The 0.2% increase in the value of the Canadian dollar relative to the US dollar had a moderate impact on the IPPI decline. Some Canadian producers who export their products to the United States are generally paid on the basis of prices set in US dollars. Consequently, the strength of the Canadian dollar in relation to the US dollar had the effect of reducing the corresponding prices in Canadian dollars. If the exchange rate used to convert these prices had remained unchanged, the IPPI would have fallen 0.8% instead of 0.9%.

Among the products that are more sensitive to the Canadian dollar's exchange rate against the US dollar, other than chemicals and lumber products, motor vehicles and other transport equipment products edged down 0.2% and electrical and communication products fell 0.4%.

Excluding petroleum and coal prices, the IPPI decreased 0.6%, after moving in the opposite direction in the previous two months. The Index has been fairly stable since June 2009.

### **12-month change in the IPPI: Second consecutive increase**

The IPPI was up 0.2% in June compared with the same month a year earlier. It was the second year-over-year increase following more than a year of consecutive declines.

The increase in the IPPI over the past 12 months was largely led by higher prices for primary metal products (+8.4%). There were smaller advances in petroleum and coal products (+2.7%), chemical products (+2.8%), and lumber and other wood products (+2.7%).

All major groups of primary metal products registered year-over-year gains. The biggest contributor was other non-ferrous metal products (+12.6%), followed by copper and copper alloys (+16.4%), aluminum products (+9.6%), nickel products (+18.4%) and iron and steel products (+2.4%).

In particular, higher prices for other non-ferrous metal products was mainly due to precious metals, including gold and gold alloy products (+20.3%), silver and platinum (+17.1%) and precious metal basic manufactured shapes (+17.5%).

The increase of prices of softwood lumber (+4.0%) was the primary reason for higher prices for lumber and other wood products (+2.7%).

The product groups that contributed to most of the increase in prices for chemical products were organic chemicals (+9.8%) and synthetic resins (+3.1%).

The IPPI year-over-year advance was moderated by a decrease in prices for motor vehicles and other transportation equipment (-4.4%). This decline was primarily due to an 8.5% increase in the value of the Canadian dollar relative to the US dollar. If the direct effect of the exchange rate had been excluded, the IPPI would have risen 2.2% instead of 0.2%.

Between June 2009 and June 2010, prices for products excluding petroleum and coal edged down 0.1%, the same rate of decline as in May. The index for this product group has been falling successively on a year-over-year basis since June 2009.

### **Raw Materials Price Index: Second consecutive monthly decrease**

The Raw Materials Price Index (RMPI) declined 0.3% in June following a 7.3% drop in May. It was the second consecutive monthly decrease after four successive gains.

In June, the decline in the RMPI was mainly a result of lower prices for non-ferrous metals (-6.7%) and, to a lesser degree, animals and animal products (-2.2%).

All major groups of non-ferrous metals, except precious metals, experienced declines, particularly zinc concentrates (-12.2%), copper and nickel concentrates (-7.1%), lead concentrates (-11.3%) and non-ferrous metal scrap (-8.2%).

The decrease in animals and animal products was concentrated in the slaughter animals group. Prices for hogs-swine for slaughter and cattle and calves for slaughter were down 7.7% and 4.0% respectively.

The downward movement in raw materials prices was moderated primarily by a 2.0% increase in mineral fuels prices. Crude oil prices rose 2.4%, after dropping significantly by 14.2% in May.

Excluding mineral fuels, the RMPI fell 2.4% in June following a 1.6% decrease in May.

Between June 2009 and June 2010, raw materials prices edged down 0.1%, their first decline after seven consecutive increases starting in November 2009. In June, mineral fuels prices were down 1.3% year-over-year, while prices for vegetable products dropped 9.5%.

The fall in prices for vegetable products over the 12-month period was primarily due to lower prices for grains (-22.2%) and oilseeds (-23.2%). The downward effect of these two groups was moderated by a significant rise in prices for rubber and natural gums (+90.2%).

There were year-over-year decreases for most grains, especially wheat (-24.8%), corn and other grains (-20.9%) and barley (-21.1%). Among the oilseeds products, prices for canola and soybeans dropped 19.6% and 26.1% respectively.

Higher prices for ferrous materials (+18.6%), non-ferrous metals (+3.5%) and animals and animal products (+2.8%) moderated the RMPI year-over-year decrease.

Non-ferrous metals prices were mainly affected by higher prices for precious metals (+19.4%), copper and nickel concentrates (+19.8%) and non-ferrous metal scrap (+20.3%). On the other hand, the higher prices were largely offset by lower prices for radioactive products (-24.9%) and lead concentrates (-11.1%).

Relative to June 2009, the RMPI excluding mineral fuels continued its upward trend with a 1.1% increase, which is smaller than the gains observed in April (+5.0%) and May (+4.3%).

**Note to readers**

All data in this release are seasonally unadjusted and is subject to revision for six months (e.g., when the July index is released, the index for the preceding January becomes final).

The **Industrial Product Price Index** (IPPI) reflects the prices that producers in Canada receive as the goods leave the plant gate. It does not reflect what the consumer pays. Unlike the Consumer Price Index, the IPPI excludes indirect taxes and all the costs that occur between the time a good leaves the plant and the time the final user takes possession of it, including the transportation, wholesale, and retail costs.

Canadian producers export many goods. They often indicate their prices in foreign currencies, especially in US dollars, which are then converted into Canadian dollars. In particular, this is the case for motor vehicles, pulp, paper and wood products. Therefore, a rise or fall in the value of the Canadian dollar against its US counterpart affects the IPPI. But the conversion into Canadian dollars only reflects how respondents provide their prices. Moreover, this is not a measure that takes into account the full effect of exchange rates, since that is a more difficult analytical task.

The conversion of prices received in US dollars is based on the average monthly exchange rate (noon spot rate) established by the Bank of Canada, and it is available on CANSIM in table 176-0064 (series v37426). Monthly and annual variations in the exchange rate, as described in the text, are calculated according to the indirect quotation of the exchange rate (for example, CAN\$1 = US\$X).

The **Raw Materials Price Index** (RMPI) reflects the prices paid by Canadian manufacturers for key raw materials. Many of those prices are set on the world market; however, most prices are denominated in Canadian dollars. For this reason, conversion into Canadian dollars has only a minor effect on the calculation of the RMPI. Moreover, the full effect of exchange rates on the RMPI is not measured, since that is a more difficult analytical task.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.

Note(s): Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.

**Note(s):** Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.

**Note(s):** Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.  
 2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.  
**Note(s):** Indexes for the most recent six months shown are subject to revision.

1. The aggregation of indexes by commodity or by industries should produce the same grand total. When these totals occasionally differ due to rounding, the All Commodities Index shall be regarded as authoritative, and the All Manufacturing Industries is adjusted to match.

2. The numeric code preceding the CANSIM series number is the 1997 North American Industry Classification System (NAICS) code.

Note(s): Indexes for the most recent six months shown are subject to revision.

## Industrial Product Price Indexes (1997=100)

---

The Industrial Product Price Indexes (IPPI) measure price changes for major commodities sold by Canadian manufacturers. Elemental indexes are calculated for 980 Principal Commodity Group Aggregates (PCGA) outputs as defined in the 1997 Input/Output (I/O) table. Weights used to aggregate commodity indexes are taken from the output or "Make" matrix of the I/O system which provides an integrated set of commodity values for all manufacturing industries.

Directly surveyed commodities are supported by formal sampling procedures. Such indexes are derived from prices reported for the 15th of the month or the nearest prior business day for comparable transactions.

Selected indexes are published about four weeks after the reference month in Statistics Canada's *The Daily* (catalogue no. 11-001-X) following a pre-announced schedule of release dates. Simultaneously, all the indexes become available on CANSIM in tables 329-0038 to 329-0049 or by request.

Each release of numbers is subject to revision for six months, i.e., when a July index is released, the index for the preceding January becomes final. Exceptions to this rule are announced.

### Price surveys

About 9,000 prices are collected monthly from about 3,000 producers for goods sold, which are valued at the boundary of the establishment, wherein the cost of taxes collected at that point and transportation provided by public carriers beyond that point are excluded. Prices are reported for finely specified transactions wherein both the good and terms of sale are identified. Such collections are instituted for important commodities. Expansions are made to the samples where price movement has a regional dimension or where there are important flows of goods to export markets.

Sampling for any directly surveyed elemental index is usually done by a formal probability sampling procedure. Important producers are «must take» respondents. A random selection is taken from the smaller producers. These samples are redrawn on a regular cycle as dictated by changes in the market. A directly surveyed elemental index is usually supported by 12 to 15 price quotes. An index may be derived from as few as 8 quotes or as many as 30 quotes.

About 700 of the 980 PCGAs in the manufacturing sector are accommodated by direct survey and these account for about 90% of the value of manufacturing output in 1997. The price movement for the other PCGAs is estimated indirectly from either directly priced PCGAs or through borrowing price movement from other price series.

### Weight base

Commodity and industry weights are taken from the «Make» matrix of the 1997 Input/Output table which, in turn, is derived from 1997 values reported for the Survey of Manufacturers and edited to conform to the 1997 North American Industry Classification System. However, each December, company/product weights within a commodity index can be changed in order to reflect important changes in production patterns.

### Formula

Chained series of fixed weighted price indexes are calculated by a linking procedure whereby more recent varieties and changes to establishments are introduced systematically, as required, in December of each year. Weights from the commodity level through higher levels of aggregation are held constant.

The general formula used for the main aggregations describes the price movement of a specified group of commodities where  $w^i$  are the values of the output of each commodity:

$$P_{t/o}^{(agg)} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(agg)}$  denotes the composite price index movement between the base period  $o$  and time  $t$  for the defined aggregate;

$w^i$  is the transaction value of the element  $i$  in the base period;

$P_{t/o}^i$  is the price index for element  $i$ , meaning its price change from the base period to time  $t$ ;

$\sum_i$  indicates summation over all elements  $i$  in the defined aggregate.

## Historical data

Historical series on the 1997 base for the Industry Price Indexes are available on CANSIM. The historical series are computed for the industry indexes classified under the 1997 North American Industry Classification System (NAICS) and for commodity indexes classified under the Principal Commodity Group Aggregates (PCGA) classification. The historical series were obtained by linking together movements from the 1997-based Industrial Product Price Indexes (IPPI) series and the corresponding 1992-based Industrial Product Price Indexes (IPPI) series, using December 1996 as the linking period. A set of concordance tables between both sets of IPPI series are available to the public.

## Reference documents

### 62-558-X **Industry Price Indexes, 1986=100: Users' Guide**

This publication describes briefly the economic content of the series and presents a short description of different aggregations produced. In the tables the weighting patterns (1986) for both commodities and commodity groupings are shown. Descriptions of the characteristics of the elemental indexes are provided. Comments on index use are also provided.

### 62-556-X **Industrial Product Price Indexes, 1981=100, Concepts and Methods**

This publication describes the economic content of the series within the framework of the system of national accounts and describes how this affects price index methodology. Sampling and pricing methods are described, as are index calculation and aggregation procedures. A glossary of terms is also provided. This product is not available electronically, but a copy may be obtained through the Producer Prices Division Client Services Unit (see contact information below).

For further details, please contact Producer Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone 613-951-4550, toll-free: 1-888-951-4550, facsimile 613-951-3117, e-mail: [ppd-info-dpp@statcan.gc.ca](mailto:ppd-info-dpp@statcan.gc.ca).

## Raw Materials Price Indexes (1997=100)

---

The Raw Materials Price Indexes (RMPI) measure price changes for the purchase of raw materials by Canadian industry. The term "raw material" refers either to a commodity that is sold for the first time after being extracted from nature, or a substitutable recycled product (for example, metal scrap). For example, wheat is considered as a raw material, but wheat flour is not, iron ore is but not pig iron, coal but not electricity. Approximately eighty commodities are priced in the index, grouped into seven major components.

The index and the major group indexes, on a 1997 time base, are published monthly in Statistics Canada's The Daily approximately four weeks after the end of the reference month. They are also available at that time on CANSIM in table 330-0006.

### Historical data

The new historical series were obtained by linking together movements from the 1997-based Raw Material Price Indexes (RMPI) series and the corresponding 1992-based Raw Material Price Indexes (RMPI) series, using December 1996 as the linking period. An explanatory note on the methods used to compute the historical series, as well as a set of concordance tables between both sets of RMPI series are available to the public.

### Coverage

The index covers purchases of imported and domestically produced goods by Canadian industry, generally for further processing, and does not cover exports or flows of raw materials directly to final demand (principally foodstuffs). For example, potatoes bought by food processing manufacturers (for the manufacture of potato chips, or frozen french fries) are included in the index, but those bought by consumers directly are not.

As a purchasers' price index, prices should include all charges purchasers incur to bring a commodity to the establishment gate. Thus transportation charges, taxes net paid and custom duties are all included. So also are the effects of subsidies, if any are paid to the purchaser. While prices are ideally collected from the purchaser, there are several cases where other well known prices are used instead: for example, marketing board prices for eggs and milk, and stockyard prices for some livestock. In a few cases, where data for unprocessed materials are not available, prices are taken for a similar commodity at the next stage of processing as occurred for some non-ferrous metals. A detailed description of the characteristics of prices for any commodity is available from Producer Prices Division on request.

Prices collected each month are those in effect on the 15th of the month or the nearest prior business day. In a few cases, prices used are averages for the week which includes the 15th. Prices are reported directly to Statistics Canada or are taken from trade publications or from publications of other government departments.

### Weight base

Weights were derived from the 1997 Input/Output tables which provide values at purchasers' prices of commodities purchased as intermediate inputs.

Within individual commodity indexes, the prices are weighted according to their market share in a recent year. In a few instances, where data are not available, the price quotations are equally weighted.

## Formula

Indexes for aggregates of individual raw materials are calculated according to the following formula:

$$P_{t/o}^{(\text{agg})} = \sum_i \frac{w^i}{\sum w^i} \cdot P_{t/o}^i$$

$P_{t/o}^{(\text{agg})}$  denotes the composite price index movement between the base period  $o$  and time  $t$  for the defined aggregate;

$w^i$  is the transaction value of the element  $i$  in 1997;

$P_{t/o}^i$  is the price index for element  $i$ , meaning its price change from the base period  $o$  to time  $t$ ;

$\sum_i$  indicates summation over all elements  $i$  in the defined aggregate.

## Electric Power Selling Price Indexes, Non-residential (1997=100)

---

Electric Power Selling Price Indexes are published on a regional and provincial basis for two broad industrial customer categories of sales; for bills less than 5000 kW and for sales of 5000 kW or more. Prices are reported by electric utilities for non-interruptible power contracts with manufacturing, service, and other Canadian industrial customers. Monthly prices are collected from all major generating and distributing utilities three times a year. The resulting indexes are released with other monthly Industry Price Indexes for April, August and December of each year. The indexes have 1997 as a time reference base and the weights used are 1992 company revenues from sales of electricity, as collected by Producer Prices Division.

The formula used to calculate the Electric Power Selling Price Indexes is a fixed weighted index formulation, which is the same as that described in the explanation of methods used for the Industrial Product Price Indexes, 1997=100. The indexes are available on CANSIM in table 329-0050. Indexes for the current year and the previous year are subject to revision.

For further details, please contact Producer Prices Division, Statistics Canada, Ottawa, Ontario K1A 0T6, telephone 613-951-4550, toll-free: 1-888-951-4550, facsimile 613-951-3117, e-mail: [ppd-info-dpp@statcan.gc.ca](mailto:ppd-info-dpp@statcan.gc.ca).

**Note(s):** The bottom line in each series title block may contain, in order from left to right, the following: the CANSIM series number (v nnnnnn) and a numeric descriptor. The numeric descriptor is of the order ss-mm-nn-pppp-rr where ss indicates the S-level commodity code (from 9 to 28) mm indicates the M-level commodity code (from 14 to 43, 45 to 69) nn indicates the M-level commodity split, or 91, which indicates a special aggregation or 99, which indicates special details pppp indicates the PCGA code (except for some special aggregations which include several PCGA s) rr indicates a split of a PCGA.
