## Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between Statistics Canada, the citizens of Canada, its businesses, governments and other institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

## User information

## Symbols

The following standard symbols are used in Statistics Canada publications:
. not available for any reference period
.. not available for a specific reference period
... not applicable
0 true zero or a value rounded to zero
0 s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
p preliminary
r revised
x suppressed to meet the confidentiality requirements of the Statistics Act
E use with caution
F too unreliable to be published

## Note to Users

All totals are calculated from full figures and rounded independently; consequently, totals may not equal the sum of their components.

Data quality, concepts and methodology
Technical notes

## Highlights

- Canada's merchandise exports and imports both advanced in December on the strength of automotive products. Exports rose $1.7 \%$ and imports increased $1.8 \%$. As a result, Canada's trade deficit with the world widened to $\$ 246$ million in December from $\$ 201$ million in November.
- Exports grew to $\$ 32.2$ billion from $\$ 31.7$ billion in November. This fourth consecutive monthly gain was due to a $2.1 \%$ increase in volumes, while prices fell $0.4 \%$. Automotive products were responsible for nearly two-thirds of the growth followed by machinery and equipment and energy products. Industrial goods and materials declined in December.
- Since May, with the exception of August, exports have been on the rise. However, export value for December 2009 remained 8.0\% below the value of December 2008.
- Imports increased to $\$ 32.4$ billion from $\$ 31.9$ billion in November, the result of volumes rising $1.1 \%$ and prices increasing $0.7 \%$. For the second consecutive month, automotive products led the gain, representing more than half the growth in imports in December. Industrial goods and materials and energy products also increased while machinery and equipment decreased during the month.
- The gain in imports in December represented the second consecutive monthly increase. Overall, imports remained $9.1 \%$ below the level registered in December 2008.
- Led by passenger cars, exports to the United States rose $2.9 \%$, to $\$ 24.1$ billion, surpassing the $2.0 \%$ gain in imports. As a result, Canada's trade surplus with the United States grew to $\$ 3.7$ billion in December from $\$ 3.4$ billion in November.
- Exports to countries other than the United States fell $1.8 \%$ while imports from these countries increased $1.5 \%$. Consequently, Canada's trade deficit with countries other than the United States widened to $\$ 3.9$ billion in December from $\$ 3.6$ billion in November.

## Note to readers

Merchandise trade is one component of Canada's international balance of payments, which also includes trade in services, investment income, current transfers as well as capital and financial flows.

International merchandise trade data by country are available on both a balance of payments and a customs basis for the United States, Japan and the United Kingdom. Trade data for all other individual countries are available on a customs basis only. Balance of payments data are derived from customs data by making adjustments for characteristics such as valuation, coverage, timing and residency. These adjustments are made to conform to the concepts and definitions of the Canadian System of National Accounts.

Data in this release are on a balance of payments basis, seasonally adjusted in current dollars. Constant dollars are calculated using the Laspeyres volume formula.

## Revisions

In general, merchandise trade data are revised on an ongoing basis for each month of the current year. Current year revisions are reflected in both the customs and balance of payments based data. Revisions to customs based data for the previous year are released on a quarterly basis. Revisions to balance of payments based data for the three previous years are released annually in June.

Factors influencing revisions include late receipt of import and export documentation, incorrect information on customs forms, replacement of estimates with actual figures, changes in classification of merchandise based on more current information, and changes to seasonal adjustment factors.

Revised data are available in the appropriate CANSIM tables.

## Analysis

## Higher volumes of automotive products lead the gain in exports

Exports of automotive products increased $8.1 \%$ to $\$ 4.5$ billion, as volumes rose $11.3 \%$. Exports of passenger cars increased $11.7 \%$ in order to replenish inventories of strong selling Canadian manufactured models. Exports of passenger cars have been on an upward trend since May 2009. Motor vehicle parts and trucks also posted gains in December.

Exports of machinery and equipment grew $3.4 \%$ to $\$ 6.3$ billion, due to rising volumes. Higher exports of aircraft and industrial machinery were the main factors behind the increase. Declining exports of telecommunication equipment mitigated the gain in the sector.

Energy products exports were up $1.5 \%$ to $\$ 7.8$ billion, the result of a $5.7 \%$ gain in prices as volumes fell $3.9 \%$. Exports of natural gas grew $5.8 \%$ and have been rising since May 2009. Before this period, exports of natural gas had declined for ten consecutive months, as inventories remained high due to weak demand. Exports of petroleum and coal products increased $5.0 \%$ while exports of electricity declined $22.6 \%$, thereby moderating the growth in this sector.

Other crude non-metallic minerals largely accounted for the decrease in exports of industrial goods and material, which fell $1.1 \%$ to $\$ 6.8$ billion. Exports of nickel ores and precious metals also decreased, while iron ores posted a gain.

## Imports rise on the strength of automotive products

Imports of automotive products increased 6.0\% to $\$ 5.8$ billion, continuing the upward trend that began in June 2009. Imports of motor vehicle parts increased $11.1 \%$, reflecting the higher demand from the United States. Imports of passenger cars grew $3.2 \%$ led by imports of cars from overseas. Trucks and other motor vehicles also posted gains.

Imports of industrial goods and materials grew $3.0 \%$ to $\$ 6.3$ billion as volumes increased $2.0 \%$. Imports of metals in ores, namely iron ores, grew $17.1 \%$ followed by precious metals which gained $12.9 \%$ in December.

Imports of energy products grew $5.4 \%$ to $\$ 3.3$ billion as prices rose $7.2 \%$. Imports of crude petroleum grew $17.0 \%$, while imports of coal and other related products declined in December. The gain in imports of energy products represented the third consecutive monthly increase.

Imports of machinery and equipment fell $2.4 \%$ to $\$ 8.6$ billion as imports of aircraft and other transportation equipment declined $16.6 \%$. Other communication equipment, such as high definition flat panel televisions, smart phones and digital cameras, were also a factor behind the decline in the sector.

## Technical notes

## The Canadian international merchandise trade statistical program

## I Introduction

The objective of this text is to provide a general overview of the Canadian International Merchandise Trade Statistical Program with special reference to concepts and definitions. The text is intended for the general user and simplicity is emphasized. More technical details can be obtained from the International Trade Division upon request.

## II Conceptual framework

1. Objectives and coverage: The primary objective of the Canadian International Merchandise Trade Statistical Program is to measure the change in the stock of material resources of the country resulting from the movement of merchandise into or out of Canada.Information on imports and exports are inputs into the System of National Accounts particularly in the Balance of Payments and Gross Domestic Product, and are used in the formulation of trade and budgetary policies. Governments, importers, exporters, manufacturers and shipping companies use trade statistics to:

- monitor import penetration and export performance;
- monitor commodity price and volume changes;
- examine transport implications.

2. Trade statistics - Customs basis/Balance of Payments basis: Merchandise trade statistics are reported and presented on two different bases: Customs basis and Balance of Payment basis. (B.O.P.)

When goods are imported into or exported from Canada, declarations must be filed with Customs giving such information as description and value of the goods, origin and port of clearance of commodities and the mode of transport. Most of this information is required for the purposes of Customs Administration. Statistics developed from administrative records of Customs are commonly referred to as Customs based trade statistics.

Customs based trade statistics are more accurate at measuring imports than they are at measuring exports. This is the case because Customs are typically more vigilant with respect to goods entering the country then they are with goods leaving the country.

Customs based export statistics may understate and/or incorrectly portray the destination of exports. Export statistics are understated when the proper documentation is not filed with Customs. Exports are incorrectly portrayed when the country of final destination is inaccurately reported on the customs documentation - this occurs most frequently when goods are routed through an intermediary country before continuing on to their final destination.

Statistics Canada does not have a measure of undercoverage but periodically conducts reconciliation exercises with its major trading partners, excluding the United States.

On January 1st, 1990, Canada entered into a Memorandum of Understanding (MOU) with the United States concerning the exchange of import data. As a consequence, each administration is using the other's import data to replace its own export data. Canada's international merchandise trade statistics are, therefore, no longer derived exclusively from the administrative records of Canada Border Services Agency, but from United States Customs records as well.

Customs based information is adjusted to conform with the National Accounts concepts and definitions. The adjustments to derive Balance of Payments based trade data include trade definition, valuation and timing related adjustments. The principal difference between the two trade concepts is that Customs based merchandise trade statistics cover the physical movement of goods as they are reflected on customs documents, while Balance of Payments adjusted data are intended to cover all economic transactions between residents and non-residents which involve merchandise trade. This section describes the concepts and processes pertaining to the Customs based trade statistics only. (For further information on Balance of Payments adjusted data see the publication "Canada's Balance of International Payments" Catalogue no. 67-001-XPB).
3. System of trade: Canadian trade statistics are compiled according to the "General" system of trade as defined by the United Nations Statistical Office. Under this system, imports include all goods which have crossed Canada's territorial boundary, whether for immediate consumption in Canada or stored in bonded Customs warehouses. Domestic exports include goods grown, extracted or manufactured in Canada, including goods of foreign origin which have been materially transformed in Canada. Re-exports are exports of goods of foreign origin which have not been materially transformed in Canada, including foreign goods withdrawn for export from bonded customs warehouses. Total exports are the sum of Domestic exports and Re-exports. Thus the general trade system, in principal, presents all goods entering the country (imports) and all goods leaving the country (exports). It differs from the "Special" system of trade in the treatment of imported goods into Customs bonded warehouses. Under the "Special" system, these goods are counted only if and when they are withdrawn from Customs warehouses for home consumption. They are not counted in export statistics unless they have first cleared Customs.

Conceptually, under the "General" system, the statistical frontier coincides with the geographical boundary, while under the "Special" system, it coincides with the Customs boundary.
4. Valuation: For Customs purposes, imports are recorded at values established according to the provisions of the Customs Act, which, since January 1st, 1985, reflects valuation methods based on the General Agreement on Tariffs and Trade (GATT) Valuation Code System. It generally requires the value for duty of imported goods be equivalent to the transaction value or the price actually paid.
To determine the transaction value of imported goods, all transportation and associated costs arising in respect of the goods being appraised prior to and at the place of direct shipment to Canada, are to be added to the price of the goods. Therefore, Canadian imports are valued F.O.B. (Free on Board), place of direct shipment to Canada. It excludes freight and insurance costs in bringing the goods to Canada from the point of direct shipment.

To countries other than the United States, exports are, in principal, valued or recorded at the values declared on export documents which usually reflect the transaction value, i.e. actual selling price, or in the case of a non-arm's length transaction, the transfer price used for company accounting purposes. Canadian exports to overseas countries are valued at F.O.B. port of exit, including domestic freight charges to that point but net of discounts and allowances. As of January, 1990, Canadian exports to the U.S. are valued F.O.B. point of exit from Canada. Prior to 1990, they were valued F.O.B. place of lading net of freight charges, discounts and allowances.
5. Statistical period: The reference period is the calendar month and the calendar year. The closing of the statistical month for imports and Canadian exports to the United States is defined as the last calendar day of the month, based as closely as practicable on the date of clearance from Customs.
The closing of the statistical month for exports, to countries other than the United States, is also defined as the last calendar day of the month. Those export documents which are received too late for incorporation in the current month are assigned to the month the transaction took place. If a monthly summary report from a high volume exporter is not received on time, the data are imputed for the current month and revised with the trade value in the following statistical month.
6. Trading partner attribution (Country of origin/destination): Exports are attributed to the country, which is the last known destination of the goods at the time of export. Exports to the United States are attributed to the state of destination.
Imports are attributed to their country of origin, that is, the country in which the goods were grown, extracted or manufactured in accordance to the rules of origin administered by Canada Border Services Agency. Imports from
the United States are attributed to the state of origin. Prior to 1988, most imports were attributed to the country of export/consignment with the exception of imports from Central and South America.
7. Principal trading areas: The "principal trading areas" are country groupings defined as follows:

United States: (includes trade with Puerto Rico and the U.S. Virgin Islands).

## Japan:

E.U. (European Union): Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Poland, Portugal,Romania, Slovakia, Slovenia, Spain, Sweden and United Kingdom.

Other O.E.C.D.: Australia, Canada, Iceland, Mexico, New Zealand, Norway, South Korea, Switzerland, and Turkey. (The E.U. countries, United States, and Japan are also members of O.E.C.D. - the Organization for Economic Co-operation and Development).

Other countries: This group includes all countries and territories other than the United States, Japan, E.U. and other O.E.C.D.
8. Legal framework: Import and export statistics with countries other than the United States are derived from information contained on administrative records collected by the Canada Border Services Agency under the Customs Act. Copies of these documents (or information therefrom) are sent to Statistics Canada in accordance with Section 25 of the Statistics Act. It follows that the disclosure of trade statistics is governed by both the Customs Act and the Statistics Act and is subject to the provisions of Section 17.(2)(a) of the latter. Disclosure of export statistics to the United States is now governed by a Memorandum of Understanding which provides for an exchange of detailed import statistics between Canada and the United States.

Questions concerning details of methods not covered by these notes should be addressed to the Marketing and Client Services Section, International Trade Division, Statistics Canada, Ottawa, Ontario, K1A OT6.
