## Note of appreciation

Canada owes the success of its statistical system to a long-standing partnership between
Statistics Canada, the citizens of Canada, its businesses, governments and other
institutions. Accurate and timely statistical information could not be produced without their continued cooperation and goodwill.

## User information

## Symbols

The following standard symbols are used in Statistics Canada publications:
. not available for any reference period
.. not available for a specific reference period
... not applicable
0 true zero or a value rounded to zero
0 s value rounded to 0 (zero) where there is a meaningful distinction between true zero and the value that was rounded
p preliminary
r revised
x suppressed to meet the confidentiality requirements of the Statistics Act
E use with caution
F too unreliable to be published

## Note to users

All totals are calculated from full figures and rounded independently; consequently, totals may not equal the sum of their components.

The data is based on commodity groups (sector, subsector and major group).

Technical notes

## Highlights

Canada's merchandise exports rose $5.2 \%$ in May, led by higher volumes of automotive products while imports increased $5.7 \%$, reflecting broad-based gains in volumes. Canada posted a trade deficit with the world of $\$ 503$ million in May, compared to a deficit of $\$ 330$ million in April.

Exports rose to $\$ 34.5$ billion in May from $\$ 32.8$ billion in April, following two months of decline. While all the export sectors experienced gains, automotive products accounted for over half the growth.

Export volumes increased $3.9 \%$ and prices grew 1.2\%. Export volumes have been trending upwards since the low reached in May 2009.

Imports rose to $\$ 35.0$ billion from $\$ 33.1$ billion in April, as all import sectors, except agricultural and fishing products, grew in May. Machinery and equipment, industrial goods and materials as well as other consumer goods led the gain in imports.

Import volumes increased $4.2 \%$ while prices grew 1.4\%. Import volumes, up for a fourth consecutive month, have been trending upward since March 2009.

Exports to the United States increased $5.5 \%$ while imports grew $5.8 \%$, both on the strength of automotive products trade. Overall, Canada's trade surplus with the United States widened to $\$ 3.6$ billion in May from $\$ 3.5$ billion in April.

Exports to countries other than the United States, led by a $25.2 \%$ increase in exports to the European Union, grew $4.4 \%$ while imports rose $5.5 \%$. As a result, Canada's trade deficit with countries other than the United States expanded to $\$ 4.1$ billion in May from $\$ 3.8$ billion in April.

## Note to readers

Merchandise trade is one component of Canada's international balance of payments, which also includes trade in services, investment income, current transfers as well as capital and financial flows.

International merchandise trade data by country are available on both a balance of payments and a customs basis for the United States, Japan and the United Kingdom. Trade data for all other individual countries are available on a customs basis only. Balance of payments data are derived from customs data by making adjustments for characteristics such as valuation, coverage, timing and residency. These adjustments are made to conform to the concepts and definitions of the Canadian System of National Accounts.

Data in this release are on a balance of payments basis, seasonally adjusted in current dollars. Constant dollars are calculated using the Laspeyres volume formula.

## Revisions

In general, merchandise trade data are revised on an ongoing basis for each month of the current year. Current year revisions are reflected in both the customs and balance of payments based data. Revisions to customs based data for the previous year are released on a quarterly basis. Revisions to balance of payments based data for the three previous years are released annually in June.

Factors influencing revisions include late receipt of import and export documentation, incorrect information on customs forms, replacement of estimates with actual figures, changes in classification of merchandise based on more current information, and changes to seasonal adjustment factors.

Revised data are available in the appropriate CANSIM tables.

## Analysis

## Passenger autos lead the growth in exports

Automotive products exports rose $20.8 \%$ to $\$ 5.4$ billion, as volumes grew $16.9 \%$. Exports in this sector trended downward from December 2006 to a low of $\$ 2.6$ billion reached in January 2009. Since then, exports of automotive products have more than doubled. In May, exports of passenger autos increased $28.1 \%$ to $\$ 3.7$ billion, their highest level since December 2006. This gain reflected the popularity of some models manufactured in Canada. Exports of motor vehicle parts, up $9.6 \%$, increased for a seventh consecutive month.

Exports of machinery and equipment grew $4.6 \%$ to $\$ 6.3$ billion, as a result of a $4.8 \%$ increase in prices while volumes declined slightly. Exports of other end products, namely gold coins, increased $25.2 \%$ and were the main factor behind the increase in the sector. Exports of industrial machinery such as drilling, excavating and mining machinery also grew in May. Mitigating the gain in the sector were lower exports of aircraft, engines and parts.

Exports of agricultural and fishing products increased $6.0 \%$ to $\$ 3.0$ billion. Higher exports of meat and meat preparations, wheat, as well as other food, feed, beverages and tobacco were the main contributors to the gain. Prices of agricultural and fishing products, which had been declining since October 2008, grew 3.4\% in May.

Following three months of declines, exports of energy products increased $1.6 \%$ to $\$ 7.7$ billion, as volumes rose $8.1 \%$ while prices fell. Exports of natural gas grew $21.3 \%$, followed by exports of petroleum and coal, up $13.4 \%$. Moderating the gain in the sector, exports of crude petroleum fell $8.5 \%$, a third consecutive month of decline.

## Widespread increases in volumes drive the gain in imports

Machinery and equipment imports grew $6.6 \%$ to $\$ 9.4$ billion. This fourth consecutive month of increase was largely the result of volumes increasing $5.3 \%$. Widespread gains in the sector were led by office machines and equipment, other equipment and tools as well as other industrial machinery.

Imports of office machines and equipment increased $19.8 \%$ as new electronic products became available in May. Imports of other equipment and tools grew $6.8 \%$, reflecting gains in a wide variety of commodities such as laboratory equipment, furniture and fixtures and electrical transformers.

Imports of industrial goods and materials rose $6.8 \%$ to $\$ 7.3$ billion, as prices increased $5.4 \%$. Over three-quarters of the gain in the sector were attributable to higher imports of metals in ores, precious metals and metal fabricated products. Imports of metals in ores grew $34.2 \%$ while precious metals increased $17.3 \%$ on the strength of gold.

Following two months of declines, imports of other consumer goods grew $9.3 \%$ to $\$ 4.8$ billion, as volumes rose $5.2 \%$. Imports of miscellaneous end products, such as medicinal and pharmaceutical products, accounted for most of the gain.

Imports of automotive products increased $4.8 \%$ to $\$ 5.9$ billion. The gain in the sector reflected a $3.1 \%$ increase in volumes. Imports of motor vehicle parts, up $7.7 \%$, accounted for more than two-thirds of the gain in the sector.

## Technical notes

## The Canadian international merchandise trade statistical program

## Introduction

The objective of this text is to provide a general overview of the Canadian International Merchandise Trade Statistical Program, with special reference to concepts and definitions. The text is intended for the general user and simplicity is emphasized. More technical details can be obtained from the International Trade Division, Statistics Canada upon request.

## Conceptual framework

1. Objectives and coverage: The primary objective of the Canadian International Merchandise Trade Statistical Program is to measure the change in the stock of material resources of Canada resulting from the movement of merchandise into or out of the country. Information on imports and exports are inputs into the System of National Accounts, particularly in the balance of payments and gross domestic product, and are used in the formulation of trade and budgetary policies. Governments, importers, exporters, manufacturers and shipping companies use international merchandise trade statistics to:

- monitor import penetration and export performance,
- monitor commodity price and volume changes,
- examine transport implications.

2. Trade statistics (customs basis / balance of payments basis): Merchandise trade statistics are reported and presented on two different bases: customs basis and balance of payment basis.

When goods are imported into or exported from Canada, declarations must be filed with customs, giving such information as description and value of the goods, origin and port of clearance of commodities and mode of transport. Most of this information is required for the purposes of customs administration. Statistics developed from administrative records of customs are commonly referred to as customs-based trade statistics.

Customs-based trade statistics are more accurate at measuring imports than they are at measuring exports. This is the case because customs are typically more vigilant with respect to goods entering the country than they are with goods leaving the country.

Customs-based export statistics may understate or incorrectly portray the destination of exports. Export statistics are understated when the proper documentation is not filed with Customs. Exports are incorrectly portrayed when the country of final destination is inaccurately reported on the customs documentation. This occurs most frequently when goods are routed through an intermediary country before continuing on to their final destination.

Statistics Canada does not have a measure of undercoverage but periodically conducts reconciliation exercises with its major trading partners, excluding the United States.

On January 1, 1990, Canada entered into a memorandum of understanding with the United States concerning the exchange of import data. As a consequence, each administration is using the other's import data to replace its own export data. Canada's international merchandise trade statistics are, therefore, no longer derived exclusively from the administrative records of the Canada Border Services Agency, but from United States Customs records as well.

Customs-based information is adjusted to conform with the National Accounts concepts and definitions. The adjustments to derive balance of payments-based trade data include adjustments related to trade definition, valuation and timing. The principal difference between the two trade concepts is that customs-based merchandise trade statistics cover the physical movement of goods as they are reflected in customs documents while balance of payments-adjusted data are intended to cover all economic transactions that involve merchandise trade between residents and non-residents. The present document describes the concepts and processes pertaining to the customs-based trade statistics only. (For further information on balance of payments-adjusted data, see the publication Canada's Balance of International Payments, Statistics Canada (Catalogue no. 67-001-X).
3. System of trade: Canadian trade statistics are compiled according to the general system of trade, as defined by the United Nations Statistical Office. Under this system, imports include all goods that have crossed Canada's territorial boundary, whether for immediate consumption in Canada or for storage in bonded customs warehouses. Domestic exports include goods grown, extracted or manufactured in Canada, including goods of foreign origin that have been materially transformed in Canada. Re-exports are exports of goods of foreign origin that have not been materially transformed in Canada, including foreign goods withdrawn for export from bonded customs warehouses. Total exports are the sum of domestic exports and re-exports. Thus the general trade system, in principal, presents all goods entering the country (imports) and all goods leaving the country (exports). It differs from the special system of trade in the treatment of imported goods into bonded customs warehouses. Under the 'special' system, these goods are counted only if and when they are withdrawn from customs warehouses for home consumption. They are not counted in export statistics unless they have first cleared customs.

Conceptually, under the general system, the statistical frontier coincides with the geographical boundary, while under the 'special' system, it coincides with the customs boundary.
4. Valuation: For customs purposes, imports are recorded at values established according to the provisions of the Customs Act, which, since January 1, 1985, reflects valuation methods based on the General Agreement on Tariffs and Trade (GATT) Valuation Code System. In general, the value for duty of imported goods must be equivalent to the transaction value or the price actually paid.

To determine the transaction value of imported goods, all transportation and associated costs arising in respect of the goods being appraised prior to and at the place of direct shipment to Canada, are to be added to the price of the goods. Therefore, Canadian imports are valued Free on Board (FOB), place of direct shipment to Canada. It excludes freight and insurance costs in bringing the goods to Canada from the point of direct shipment.

Countries other than the United States, exports are, in principal, valued or recorded at the values declared on export documents, which usually reflect the transaction value, i.e., actual selling price or, in the case of a non-arm's length transaction, the transfer price used for company accounting purposes. Canadian exports to overseas countries are valued at F.O.B. port of exit, including domestic freight charges to that point but net of discounts and allowances. As of January, 1990, Canadian exports to the U.S. are valued F.O.B. point of exit from Canada. Prior to 1990, they were valued F.O.B. place of lading net of freight charges, discounts and allowances.
5. Statistical period: The reference period is the calendar month and the calendar year. The closing of the statistical month for imports and Canadian exports to the United States is defined as the last calendar day of the month, based as closely as practicable on the date of clearance from customs.
The closing of the statistical month for exports, to countries other than the United States, is also defined as the last calendar day of the month. Those export documents that are received too late for incorporation in the current month are assigned to the month the transaction took place. If a monthly summary report from a high volume exporter is not received on time, the data are imputed for the current month and revised with the trade value in the following statistical month.
6. Trading partner attribution (country of origin/destination): Exports are attributed to the country, which is the last known destination of the goods at the time of export. Exports to the United States are attributed to the state of destination.

Imports are attributed to their country of origin, that is, the country in which the goods were grown, extracted or manufactured in accordance to the rules of origin administered by the Canada Border Services Agency. Imports
from the United States are attributed to the state of origin. Prior to 1988, most imports were attributed to the country of export/consignment, with the exception of imports from Central and South America.
7. Principal trading areas: The 'principal trading areas' are country groupings defined as follows:

United States: includes trade with Puerto Rico and the U.S. Virgin Islands

## Japan

European Union (EU): Austria, Belgium, Bulgaria, Cyprus, Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden and United Kingdom

Other Organisation for Economic Co-operation and Development (OECD): Australia, Canada, Iceland, Mexico, New Zealand, Norway, South Korea, Switzerland, and Turkey. (The EU countries, United States, and Japan are also members of OECD)

Other countries: all countries and territories other than the United States, Japan, EU and other OECD
8. Legal framework: Import and export statistics with countries other than the United States are derived from information contained in administrative records collected by the Canada Border Services Agency under the Customs Act. Copies of these documents (or information therefrom) are sent to Statistics Canada in accordance with Section 25 of the Statistics Act. It follows that the disclosure of trade statistics is governed by both the Customs Act and the Statistics Act and is subject to the provisions of Section 17(2)(a) of the latter. Disclosure of export statistics to the United States is now governed by a memorandum of understanding that provides for the exchange of detailed import statistics between Canada and the United States.

## Contact information

Questions concerning details of methods not covered by these notes should be addressed to the Marketing and Client Services Section, International Trade Division, Statistics Canada, 170 Tunney's Pasture Driveway, Ottawa, Ontario, K1A 0 T6.
